With the WebFOCUS Business User Edition (BUE), you can perform reporting, analysis, and discovery tasks using a single tool.

In this chapter:
- Introducing the WebFOCUS Business User Edition
- Key Features
- Installation
- Navigating the Environment

Introducing the WebFOCUS Business User Edition

This topic provides an overview of the WebFOCUS Business User Edition (BUE).

WebFOCUS BUE Components

WebFOCUS BUE is a web-based environment, consisting of the following components:

**InfoAssist+**

Perform reporting and analysis as well as data discovery, from a single user interface. These categories of self-service analytics include the following capabilities:

- **Reporting and Analysis.** Create ad hoc queries; develop reports, charts, documents and other analytic views for personal usage or sharing and distribution in static or interactive formats. You can also create more advanced information assets, such as multi-page analytic documents and multi-source dashboards.

- **Data Discovery.** Explore your data to find trends, patterns, and gain new insight, by creating visualizations. Running against a high-speed data sandbox and other data sources, you can create interactive visualizations that can be saved, shared, published, and delivered as PowerPoint presentations to help you build business cases through storytelling.

**Business User Edition Portal**

Provides access to a single web-based environment, where you can create, access, or manage content and groups. You can develop new content or interact with content that has been created by other users, as well as create personal portal pages.
ReportCaster

Provides scheduling and distribution capabilities for reports and procedures, as well as independent files and URLs. Using ReportCaster, reports and files are automatically distributed on a monthly, weekly, daily, or specific basis.

WebFOCUS Installation Overview

This section briefly explains the different WebFOCUS installation components.

WebFOCUS and Your Network

WebFOCUS seamlessly integrates into your existing network by connecting web servers and application servers to your data. Users then access WebFOCUS through a web browser.

The main requirements for installing WebFOCUS are:

- **Web Browser.** To access WebFOCUS applications, you need a web browser and a TCP/IP connection to a web server or application server.

- **Web Server and Application Server.** WebFOCUS runs in part through a web server or application server. WebFOCUS BUE installs and configures a required application server.

- **Data.** WebFOCUS BUE accesses data through a High-Speed Analytics Sandbox (Hyperstage), a hybrid in-memory data store that stores, in a very compressed form, large amounts of data for retrieval, aggregation, and calculation.

Key Features

The WebFOCUS Business User Edition (BUE) is intended for business users and analysts that want to generate and share reports, charts, documents, and visualizations. It is also intended for those who want to conduct data discovery to explore trends, patterns, and opportunities. It is a WebFOCUS business intelligence (BI) and analytics platform that enables reporting and analytic capabilities, which can be delivered to users inside and outside of your organization.

WebFOCUS Business User Edition is a self-service analytics solution for groups of business users and analysts. It is not only a web-based environment, but also a multi-user, server-based product designed with a user interface that is oriented toward non-technical users.

This release includes the following features, which represent the strengths and advantages that the WebFOCUS Business User Edition offers users:
Personal Analytics Portal. Provides access to a single web-based environment, where you can create, access, or manage content and groups. You can develop new content or interact with content that has been created by other users, as well as create personal portal pages. For more information, see Navigating the WebFOCUS Business User Edition Portal on page 37.

InfoAssist+ Self-Service Analytics Tool. Perform reporting and analysis, as well as data discovery, from a single user interface. These categories of self-service analytics include the following capabilities:

- **Reporting and Analysis.** Create ad hoc queries. For example, develop reports, charts, documents and other analytic views for personal usage or sharing and distribution in static or interactive formats. You can also create more advanced information assets, such as multi-page analytic documents and multi-source dashboards. For more information, see Creating Content.

- **Data Discovery.** Explore your data to find trends, patterns, and gain new insight by creating visualizations. Running against a high-speed data sandbox and other data sources, you can create interactive visualizations that can be saved, shared, published, and delivered as PowerPoint presentations to help you build business cases through storytelling. For more information, see Building Visualizations.

- **Self-Service Data Preparation.** Connect to an existing data source or upload data spreadsheets using the simplified data preparation and management features in the WebFOCUS Business User Edition.

- **Connect to Data wizard.** Establish a connection to your existing data using the Connect to Data wizard. You can also join existing data with new data. For more information, see Connecting to Data and Editing Data.

- **Upload wizard.** Upload new spreadsheets of data quickly and share that data with others in your enterprise using the Upload wizard. You can also append the spreadsheets that you uploaded previously. For more information, see Uploading and Appending Spreadsheets.

- **Automatic Content Generation.** Generate sample analytics from which you can gain insight. You can use the sample data that is packaged with the product, or use data of your own to explore trends, patterns and opportunities. You can also open and edit these sample analytics in InfoAssist+. For more information, see Generating Content Automatically.

- **In-Document Analysis.** Using WebFOCUS Active Technologies, you can create and deliver in-document analytics as self-contained HTML5 documents that include data, an analytical engine, and interactive user interface. These documents can be sent to other users who can interact with them disconnected from the web. For more information, see Using Active Technologies.
Automated Content Distribution and Intelligent Bursting. Schedule secure, critical information to targeted recipients, or burst a single report into sections, each to be sent to a different recipient. For more information, see Creating Distribution Lists and Creating Schedules.

High-Performance Columnar Storage. WebFOCUS Hyperstage provides high-performance query response times during data discovery, in an embedded data store.

Enhanced Charting and Geographic Visualizations. Provides access to tools that you can use to create an extensive inventory of your own chart types, such as D3 charts, as well as ESRI integration, with data layers that can be merged onto a single map.

Creating Your Own Chart Types. Create your own chart extensions using JavaScript, to expand your library of new and custom charts. For more information, see Creating Your Own Chart Types.

Geographic Charts and Visualizations. Create chart-based or visualization-based maps with layers, to illustrate trends. ESRI integration through InfoAssist+ expands the information that is available to you. For more information, Creating Maps to Illustrate Trends.

Advanced Exploration. Use the Auto-Drill and Auto Link features to expand and enhance the exploration of information that is available in the reports and charts across your enterprise.

Auto-Drill. Create reports and charts that provide navigation up and down a dimensional hierarchy, using InfoAssist+. For more information, see Using Auto Drill.

Auto-Linking. Link multiple reports and charts easily based on a common parameter, so you can analyze related reports and charts, discovering trends or patterns that may not have been identified previously. For more information, see Using the Auto Linking Feature to Link Content.

Installation

Installing WebFOCUS Business User Edition on a Windows Environment

This topic provides the step-by-step instructions that you need to install WebFOCUS Business User Edition (BUE).

You can begin using WebFOCUS BUE immediately after you install the product. No additional configuration steps are required.
WebFOCUS Business User Edition System Requirements for Windows

To install WebFOCUS BUE, you must have administrator privileges. Additionally, your machine must meet the system requirements that are defined in the Hardware and Software Requirements topics.

Hardware Requirements

- Quad-core processor, 2.5 GHz minimum per core is recommended.
- 16 GB of RAM or higher is recommended for optimal performance. 8 GB of RAM minimum.
- 8 GB of free disk space.
- Ensure that the Windows page file is properly configured and that it is set to *Automatically manage paging file size*. For Windows 64-bit, the recommended paging file size is three times the size of the RAM.

Software Requirements

- 64-bit Version of Windows.
- Supported browsers: Internet Explorer® 11, Microsoft Edge®, Google Chrome™ (latest version), Mozilla Firefox® (latest version).

**Note:** Accessibility Compliance is not supported at this time.

Installing WebFOCUS Business User Edition

This section describes how to install WebFOCUS BUE.

**Procedure:** How to Install WebFOCUS Business User Edition

1. Download the installation files.
2. Double-click `installWebFOCUS_BUE8200.exe`. 
The InstallAnywhere installation program opens, as shown in the following image.

3. Choose the appropriate language from the drop-down list and click OK.

The list of languages depends on the regional language settings of the Windows Operating System where WebFOCUS BUE is being installed.

**Note:** The language selected will be the language used during the installation program. This language is also used to set the code page of the Reporting Server, which is responsible for data access.

If your data sources are in a different language, you will have to change the code page of the Reporting Server.
The Welcome window opens.

4. Click Next to continue.
The License Agreement window opens.

5. Click *I accept the terms of the License Agreement*, and then click *Next*.

**Note:**

- Only one installation per platform is supported.
- If you have an earlier release of WebFOCUS BUE installed on your machine, you will be prompted to update your installation. To perform a full or new installation, you must quit the installation program, uninstall the existing version, and perform a new installation. When you uninstall WebFOCUS BUE, all components are removed from your directory structure, except the WebFOCUS BUE Reporting Server applications. For more information, see *Uninstalling WebFOCUS Business User Edition* on page 21.
The License Code window opens, as shown in the following image.

6. Type the WebFOCUS BUE license code and first four digits of the site code that were provided with your copy of WebFOCUS BUE, and then click Next.
The Setup Preferences window opens, as shown in the following image.

7. In the Setup Preferences window, complete the following steps:

- **a.** The installation program preconfigures a user name, but requires that you type a password. You must complete the User Name credentials section to proceed with the installation. In the Password field, type a password, and then confirm your password.

  **Note:** This password must be between 4 and 20 characters in length, without spaces before or after the password. Double quotation marks are not permitted.

- **b.** Optionally, type the host name or IP address for your mail server in the Mail Server Host Name field (for example, mail@mydomain.com). This option is used for ReportCaster email distribution.

  To configure the mail server post-installation, see *Configuring for Email Distribution* on page 34.
c. Select the *Configure WebFOCUS BUE services to start automatically* check box to start the WebFOCUS BUE services. This sets the services Startup Type to Automatic. This will ensure that the services required to run the product are always running, and will not require that you start the services manually, even if you restart the machine.

If you do not select this option, you can manually start and stop the WebFOCUS BUE services from the shortcut options found in the WebFOCUS Business User Edition 82 group, or through the Windows services program.

d. Select the *Advanced Configuration* check box if you want to customize the location of your Reporting Server applications directory. The default location is `\WebFOCUS_BUE82\data\apps`.

8. Click Next to continue.

The Pre-Installation summary window opens, as shown in the following image.
Note: If you selected the Advanced Configuration check box, the following window opens.

Server applications can be created in the default location or in a new location outside of the `drive:\ibi\WebFOCUS_BUE82\` folder. Select the location of your applications and then click Next.

9. Confirm that the summary information is correct, and then click Install.

10. When the installation completes, click Done to close the installation program.
11. Sign in using the manager user credentials that you configured during the installation program.

**Running WebFOCUS Business User Edition Services Manually**

You should refer to this topic if you did not select the *Configure WebFOCUS BUE services to start automatically after a reboot* check box during the installation program.

The installation program installs the following services:

- An application server
- A Distribution Server
- A repository server
- A Reporting Server

**Note:** If you are updating an earlier release of WebFOCUS BUE, you must manually stop all WebFOCUS BUE services before beginning the installation program. For more information, see *Running WebFOCUS Business User Edition Services Manually* on page 19.
To view the status of these services, launch your Windows Services program from the Control Panel, and click the **Standard** tab. The following image highlights the WebFOCUS BUE services as they appear in the Windows Services program.
Procedure: How to Start or Stop WebFOCUS Business User Edition Services Manually

From the Start menu, click All Programs, and navigate to the WebFOCUS Business User Edition 82 program folder. The WebFOCUS Business User Edition 82 program folder is shown in the following image.

- Click Start WebFOCUS_BUE Services to start the WebFOCUS BUE services.
- Click Stop WebFOCUS_BUE Services to stop the WEBFOCUS BUE services.

Uninstalling WebFOCUS Business User Edition

If you want to remove an existing WebFOCUS BUE installation and want to perform a full installation of a newer release, you can run the uninstall program.

Note: Before you uninstall WebFOCUS BUE, it is recommended that you save the cleanup utility to a different location on your machine in case the uninstall fails and you need to manually uninstall any components. For more information, see Troubleshooting WebFOCUS Business User Edition on page 23.

Procedure: How to Preserve Your Data

The following steps can be performed if you want to preserve your data and perform a new installation, if you need to move your data to another location, or if an upgrade installation fails and you need to perform a new full installation.

1. Back up the WebFOCUS BUE repository server and Reporting Server application folders to a different location on your machine.

   By default, these are located in the following folders:

   - `drive:\ibi\WebFOCUS_BUE82\derby\WFBUE82`
   - `drive:\ibi\WebFOCUS_BUE82\data\apps`
   - `drive:\ibi\WebFOCUS_BUE82\srv\wfs\hs`
2. Uninstall WebFOCUS BUE. You can uninstall WebFOCUS BUE from the Start menu, or manually, as described in *How to Manually Uninstall WebFOCUS Business User Edition Components* on page 25.

**Procedure:** How to Restore and Move Backed Up Data

1. Install WebFOCUS BUE.
2. After the installation program is complete, do the following:
   a. Manually stop the repository server service.
   b. Replace the new repository server and Reporting Server application folders, using the backup directories that you made in step 1 of *How to Preserve Your Data* on page 21.
   c. Restart the repository server service.

**Procedure:** How to Uninstall WebFOCUS Business User Edition

1. From the Start menu, point to *All Programs*, then expand the *Information Builders* and *WebFOCUS Business User Edition 82* program folders.
2. Click *Uninstall*.

   The InstallAnywhere installation program opens.

**Note:** If the uninstall program is not visible from the Windows Start menu, uninstall the software using the Programs and Features option on the Control Panel. Alternatively, create a shortcut to C:\ProgramData\Microsoft\Windows\Start Menu\Programs. This will open Windows Explorer with a classic view of all installed programs. You can use this to navigate to WebFOCUS Business User Edition 82 in the Information Builders folder, and then run the uninstall program.
3. In the Uninstall WebFOCUS Business User Edition 82 window, click *Uninstall*, as shown in the following image.

The installation program begins and uninstalls the WebFOCUS BUE components.

**Troubleshooting WebFOCUS Business User Edition**

If you are unable to launch WebFOCUS BUE, ensure that all services are running. If they are not, do the following:

- Stop all services.
- Restart the services, and launch WebFOCUS BUE.

If this does not work, stop the services again. Before you restart the services, ensure that the Hyperstage processes, *ibengine.exe* and *postgres.exe*, are also stopped. Restart your machine if you are still unable to restart the services.
Port Assignment

By default, ports in the range of 26000 to 26040 are checked for availability. If the installation program detects that no ports in that range are available, it then increases the range by 10 and checks again for availability. For example, if ports 26000 to 26040 are unavailable, ports 26010 to 26050 are then checked.

Default Port Assignment.

- Ports 26000 to 26003 are used by the application server.
- Port 26010 is used by the repository server.
- Ports 26020 to 26023 and port 26040 are used by the Reporting Server.
- Port 26030 is used by the Distribution Server.

WebFOCUS Business User Edition Log Files

WebFOCUS BUE creates a log file in the following location for Windows 7:

`drive: \Users\user_id\WebFOCUS_BUE82_Install_date_time.log`

where:

- `user_id` is your Windows user ID.
- `date_time` is the date and time the log file was created. This log file provides information about the WebFOCUS BUE installation. If you contact Customer Support Services with an installation problem, have this file available.

Troubleshooting the Uninstall Process

If you choose to uninstall WebFOCUS BUE, and the uninstall process fails, you can follow one of the procedures in this section to clean up your machine before reinstalling the product.

Before performing one of the following procedures, ensure that you have uninstalled WebFOCUS BUE, as described in Uninstalling WebFOCUS Business User Edition on page 21.

If the WebFOCUS BUE uninstall process fails, you can run the `wf_cleanup.bat` file to clean a damaged installation on your machine.
1. Navigate to the following location on your machine:
   \drive\ibi\WebFOCUS_BUE82\WebFOCUS\utilities\install\n
2. Copy the `wf_cleanup.bat` file from the install directory to a different directory (for example, `drive:\ibi\`).
3. Right-click `wf_cleanup.bat`, and then click *Run as administrator*.
4. When prompted, type the location of the install directory to proceed.

**Note:** By default, the utility will back up the Reporting Server apps, data, and the Derby database.

**Procedure:** How to Manually Uninstall WebFOCUS Business User Edition Components

If the WebFOCUS BUE uninstall process fails, you can do the following to manually cleanup the remaining WebFOCUS BUE components on your machine.

1. Stop any running WebFOCUS BUE services on the system, as detailed in *How to Start or Stop WebFOCUS Business User Edition Services Manually* on page 21.
2. Remove any remaining services from your machine.
a. Locate the existing WebFOCUS BUE services. To get the service name, right-click the service in the Windows Services program and click Properties. The Properties dialog box opens, where you can right-click the service name and click Copy, as shown in the following image.

![WebFOCUS BUE 82 Application Server Properties (Local Computer)](image)

b. To remove a service, open the Command Prompt as an Administrator and issue the following command:

```
sc delete "service name"
```

where:

```
service name
```

Is the name of the service you are manually deleting. For example:

```
C:\sc delete "WfBUE82AppSrv"
```
3. Open Task Manager and ensure that the process ibengine.exe is not running.

4. Remove files from disk, except for the Reporting Server application folders.
   
   For example, if WebFOCUS BUE is installed on the C:\ drive, remove all folders under C:\ibi\WebFOCUS_BUE82, except for the following folders:
   
   - C:\ibi\WebFOCUS_BUE82\data\n   - C:\ibi\WebFOCUS_BUE82\srv\wfs\hs\n   - C:\ibi\WebFOCUS_BUE82\Derby\WFBE82\n
5. Click Start, point to All Programs, and expand the Information Builders folder.

7. Launch the Windows Registry Editor, and remove the following registry keys.
   
   - HKEY_LOCAL_MACHINE\SOFTWARE\WebFOCUS_BUE82
   - HKEY_LOCAL_MACHINE\SOFTWARE\Information Builders\Derby\WFBE82DbSrv
   - HKEY_LOCAL_MACHINE\SOFTWARE\Information Builders\WebFOCUS BUE 82 Reporting Server
   - HKEY_LOCAL_MACHINE\SOFTWARE\Wow6432Node\Information Builders\ReportCaster\WFBE82DistSrv
   - HKEY_LOCAL_MACHINE\SOFTWARE\Wow6432Node\Apache Software Foundation\Procrun 2.0\WFBE82AppSrv

---

**Installing the WebFOCUS Business User Edition on a Linux Environment**

The following topic describes how to install WebFOCUS Business User Edition (BUE) on a Linux environment. WebFOCUS Business User Edition (BUE) is supported on:

- Intel Linux - Kernel-2.6.32-glibc-2.6 and higher x86_64 64-bit
- IBM Power Linux - Kernel-3.16.0-libc6-2.19 and higher ppc64le 64-bit (Little Endian)
WebFOCUS Business User Edition System Requirements on a Linux Environment

The following section describes the system requirements for installing WebFOCUS BUE on a Linux environment.

**Note:** Only one installation per platform is supported.

### Installation Prerequisites

The following are installation prerequisites for installing WebFOCUS BUE on Linux:

- WebFOCUS BUE cannot be installed as user root, due to requirements of the PostgreSQL database used by Hyperstage. Installing as root will cause failures during initialization of the database and it will fail to start.

- WebFOCUS BUE requires a minimum of 5GB of available disk space to successfully install on the target system.

- An additional 8GB of required disk space is used during the installation of the product. This temporary use of disk space will be removed at the end of the installation.

  If the temp directory on the host does not meet the minimum size requirements, the InstallAnywhere environment variable IATEMPDIR can be set to use an alternate directory.

  You may specify an alternate /tmp location by setting the following environment variable:

  ```
  IATEMPDIR=/large_tmp
  export IATEMPDIR
  ```

### System Resource Limits

The operating system provides ways of limiting the amount of resources that can be used. These limits can affect the installation process.

Use the `ulimit` command to set process memory-related resource limits for your session.

The WebFOCUS BUE installation program requires ulimit to be set to 8192.

Limits can be **hard** or **soft**. Hard limits are set by the root user. Only the root user can increase hard limits, although other users can decrease them. Soft limits can be set and changed by other users, but they cannot exceed the hard limits. To view the current limits, enter the following command:

```bash
ulimit -a
```

Use the `/etc/security/limits.conf` file to store ulimit settings. Changes to this file should be made by a system administrator.
Installing WebFOCUS Business User Edition Using Console Mode

The following section describes how to install WebFOCUS BUE using Console Mode.

1. Download the self extracting installation program, `installWebFOCUSBUE8200.bin`.
2. Apply the permissions necessary for the owner of the file to execute the installation by using the following command:
   ```
   chmod u+x installWebFOCUSBUE8200.bin
   ```
3. Run the installation program using the following command:
   ```
   ./installWebFOCUSBUE8200.bin -i console
   ```
   The Welcome to WebFOCUS Business User Edition 82 prompt displays.
4. Press Enter to continue.
   The License Agreement prompt displays.
5. Read the License Agreement. Press Enter after each screen until you receive the License Agreement Acceptance prompt.
6. Type `Y` to accept the terms of the agreement and press Enter to continue.
   The Choose Install Type prompt displays.
7. Type `2` to perform a full installation of WebFOCUS BUE.
8. Press Enter.
   The License Code prompt displays.
9. Type the license code (17 digits) for the WebFOCUS BUE Installation.
   This code was sent to you as part of the email message that contained the download link for the software.
   You are prompted to enter the site code.
10. Type the site code (4 digits) for the WebFOCUS BUE Installation.
    This code was sent to you as part of the email message that contained the download link for the software.
11. Press Enter.
    The Setup Preferences prompt displays.
12. Accept the default destination folder for the installation. If you want to install WebFOCUS BUE in a different folder, type the path to the location where you want to install the software.

**Note:** Spaces are not allowed in the destination path.

You are prompted to enter the WebFOCUS BUE Administration credentials.

13. Type a password to use with the Administration ID, *manager*.

**Note:**
- The *manager* Administration ID cannot be changed.
- Passwords must be between 4 and 20 characters and include no quotation marks. Leading blanks and trailing blanks will be removed.

The Advanced Configuration prompt displays. Type *Y* and press Enter if you want to change the default directory location of the WebFOCUS BUE Reporting Server application. Type *N* and press Enter if you want to use the default directory location of the WebFOCUS BUE Reporting Server.

If you chose to use the default WebFOCUS BUE Reporting Server directory, the Pre-Installation Summary prompt displays.

14. Verify that the information in the Pre-Installation Summary window is correct, and press Enter to continue.

The installation begins.

During installation, the activity window indicates which installation program tasks are being performed.

When installation is complete, a summary is provided displaying the servers that were installed and the ports that have been assigned.

**Configuring Java Memory Allocation for the Application Server**

For UNIX installations, the default Tomcat Java memory configuration is set to use an initial Java heap size of 256MB and a maximum Java heap size of 512MB.

These settings are in located in the `/ibi/WebFOCUS_BUE82/tomcat/bin/catalina.sh` file. For example:

```
JAVA_OPTS="-XX:MaxPermSize=256m -Xms256m -Xmx512m -Djava.awt.headless=true"
```
For better product performance, it is recommended to increase these values. The initial Java heap size should be at least 1024MB (1GB). The size is normally set in Megabytes. For example:

-`-Xms1024m`
-`-Xmx2048m`

These values need to be set based on the physical memory of the machine.

It is recommended to set the minimum/initial memory value to one eighth (1/8) of the physical memory. The maximum value needs to be one quarter (1/4) of the physical memory.

**Launching WebFOCUS Business User Edition**

To launch WebFOCUS BUE, type the following:

http://host:port/ibi_apps/

**Note:** Enter the application server port number when using this command to start WebFOCUS BUE. The application server port number is the lowest port number displayed in the summary at the end of the WebFOCUS BUE installation.

The default port for the WebFOCUS BUE application server is 26000. It is listed during the end of the installation and also available in the installation log file.

Installation log files are under the user home directory. An example of an installation log file is shown in the example below:

`/${HOME}/WebFOCUS_BUE82_Install_date_time.log`

where:

**date_time**

Is the date and time the log file was created. This log file provides information about the WebFOCUS BUE installation. If you contact Customer Support Services with an installation problem, have this file available.

**Running WebFOCUS Business User Edition Servers Manually**

The following commands are used to manually start and stop the required WebFOCUS BUE servers.

**Note:** The double periods (..) before each of the entries below indicates that the full path of the items below should be entered.

**Repository Server**
To start the WebFOCUS BUE Repository Server, run:

```
nohup ../ibi/WebFOCUS_BUE82/derby/bin/start.sh &
```

To stop the WebFOCUS BUE Repository Server, run:

```
../ibi/WebFOCUS_BUE82/derby/bin/stop.sh
```

**Reporting Server**

- To start the WebFOCUS BUE Reporting Server, run:
  
  ```
  ../ibi/WebFOCUS_BUE82/srv/wfs/bin/edastart -start
  ```

- To stop the WebFOCUS BUE Reporting Server, run:
  
  ```
  ../ibi/WebFOCUS_BUE82/srv/wfs/bin/edastart -stop
  ```

**Application Server**

- To start the WebFOCUS BUE Application Server, run:
  
  ```
  ../ibi/WebFOCUS_BUE82/tomcat/bin/startup.sh
  ```

- To stop the WebFOCUS BUE Application Server, run:
  
  ```
  ../ibi/WebFOCUS_BUE82/tomcat/bin/shutdown.sh
  ```

**Distribution Server**

- To start the WebFOCUS BUE Distribution Server, navigate to the
  `../ibi/WebFOCUS_BUE82/WebFOCUS/ReportCaster/bin` directory and run:
  
  ```
  nohup ./schbkr &
  ```

- To stop the WebFOCUS BUE Distribution Server, navigate to the
  `../ibi/WebFOCUS_BUE82/WebFOCUS/ReportCaster/bin` directory and run:
  
  ```
  ./stopit
  ```

**Updating WebFOCUS Business User Edition**

You can update an earlier release of WebFOCUS BUE using the following steps.

**Procedure:** How to Update WebFOCUS Business User Edition

1. Manually stop all WebFOCUS BUE servers, including the Application Server, Repository Server, Distribution Server, Reporting Server, and Hyperstage Server.

2. Ensure that all ports that are used by WebFOCUS BUE processes are stopped. You can run a command, such as `netstat`, to check the ports.
Note: If the ports are busy, run a command, such as *lsof*, to identify what processes are still running, and stop those processes. Before you proceed, you must rerun the *netstat* command.

3. Download the self extracting installation program, *installWebFOCUSBUE8200.bin*.

4. Apply the permissions necessary for the owner of the file to execute the installation by using the following command:

   ```
   chmod u+x installWebFOCUSBUE8200.bin
   ```

5. Press Enter to continue.

   The License Agreement prompt displays.

6. Run the installation program using the following command:

   ```
   ./installWebFOCUSBUE8200.bin -i console
   ```

7. Read the License Agreement. Press Enter after each screen until you receive the License Agreement Acceptance prompt.

8. Type *Y* to accept the terms of the agreement and press Enter to continue.

   The Choose Install Type prompt displays.

9. Type *1* to update an existing WebFOCUS BUE installation to a new Service Pack level.

10. Press Enter.

11. Verify that the information in the Pre-Installation Summary window is correct, and press Enter to continue.

    The installation begins.

    During installation, the activity window indicates which installation program tasks are being performed.

12. After the install program ends, change the file permissions for the Hyperstage Server data folder by issuing the following command:

    ```
    chmod -R 0700 ../ibi/WebFOCUS_BUE82/srv/wfs/hs/pg_data
    ```

Uninstalling WebFOCUS Business User Edition

To uninstall WebFOCUS BUE, run the uninstall program using the following command:

../ibi/WebFOCUS_BUE82/Uninstall/Uninstall

Configuring for Email Distribution

An email server is required for email distribution and notifications. The following procedures provide the steps for configuring the supported mail servers.

Procedure:  How to Configure the Mail Server

1. From the Administration menu, select Administration Console.
2. Click the ReportCaster tab.
3. Click the Configuration option on the ribbon.
4. Select the Email Distribution folder.
5. Type the name of your mail server in the Mail Server text box.

In addition, if your mail server uses a secure connection or requires authentication, select the appropriate options and type the required credentials. You need to save your configuration changes and restart ReportCaster to make the changes effective.

If you use Google as your email server, see How to Configure Google as the Email Server on page 35.

If you use Yahoo as your email server, see How to Configure Yahoo as the Email Server on page 36.
Procedure:  How to Configure Google as the Email Server

1. Type the name of the Google SMTP Server in the Mail Server text box, as shown in the following image.

2. Select the This Server Requires a Secure SSL Connection check box.
3. Do not select the This Server Requires a Secure TLS Connection check box.
4. Select the This Server Requires Authentication check box.
5. Click the button to open the SMTP User ID/Password dialog box.
6. Type your Google account name.
7. Type the password for this account.
8. Confirm the password for this account.
9. Click OK to close the dialog box.
10. Click Save in the Manage Configuration group on the ribbon.
11. Click Restart in the Manage Configuration group on the ribbon.
Procedure: How to Configure Yahoo as the Email Server

1. Type the name of the Yahoo SMTP Server in the Mail Server text box, as shown in the following image.

2. Select the This Server Requires a Secure SSL Connection check box.
3. Select the This Server Requires a Secure TLS Connection check box.
4. Select the This Server Requires Authentication check box.
5. Click the button to open the SMTP User ID/Password dialog box.
6. Type your Yahoo account name.
7. Type the password for this account.
8. Confirm the password for this account.
9. Click OK to close the dialog box.
10. Click Save in the Manage Configuration group on the ribbon.
11. Click Restart in the Manage Configuration group on the ribbon.
Navigating the Environment

This topic introduces the WebFOCUS Business User Edition environment. It describes how to navigate the WebFOCUS Business User Edition (BUE) portal, the Administration Console, and InfoAssist+.

It is also important to understand that Manager users, Developers, Advanced users, and Basic users have different access to environment options. That access is determined by the group of users to which you are assigned.

Navigating the WebFOCUS Business User Edition Portal

When you access the WebFOCUS Business User Edition (BUE), using the Sign-in page or browser URL, you are presented with the BUE Portal. From the portal, depending on your user role, you can create and edit content, view content that other users published or shared, create and edit personal pages, manage users, configure the system, upload files to the repository, connect to data and edit data, and access interactive help and instructional materials.

The main components of the BUE Portal include a Getting Started Page, Home Page, Resources tree, and Menu bar.

Getting Started Page

The Getting Started page, shown in the following image, is the first page that you see when you sign in to WebFOCUS BUE with the login and password that you created during the installation.
The Getting Started page provides access to resources that get you started with the software. You can access the Information Center, a series of videos, and the Upload wizard and Connect to Data wizard features.

Only Manager users can access this page.

**Home Page**

The Home page, which is shown in the following image, is the first page that you see when you sign in as a Basic User, Advanced User, Developer, or Group Administrator.

The Welcome page has three sections that you can interact with:

- Menu bar
- Resources tree
- Quick Links tab

The content in these sections varies, depending on your user type.

**Menu Bar**

The Menu bar is located in the upper-right section of the screen, inside the top banner. The following image shows the Menu bar that appears when you are signed in as a Manager.
The Menu bar gives you access to the following options:

- Change your password (click your username).

- Tools:
  - View the status of deferred reports, and manage them.
  - Stop your outstanding interactive requests that are running.
  - Access Session Viewer, where you can visualize the exploratory analysis of the current web session.
  - Access the ReportCaster Status, where you view the status of your scheduled jobs and log reports.

- Administration:
  - Access the Security Center, where you define users and groups and grant access permissions.
  - Access the Administration Console, where you configure, administer, and monitor the components of the WebFOCUS application.
  - Access the Reporting Server Console, where you can view and manage the server environment.
  - View and administer the private resources for groups and users.
  - Switch between Normal mode (seeing your own content) and Manager mode (managing other user content).

- Open the Resources tree on the right side of the window, so you can manage content on Personal Pages.

- Access the online Help, Information Center, a library of Help topics, self-service videos, Community, Information Builders Home page, as well as information about the WebFOCUS Business User Edition application, version, and available licenses.

- Sign out
Resources Tree

The Resources tree, located on the left side of the Home page, contains your available resources, such as domains, folders, and content. It also contains functionality that allows you to save content as a favorite, or perform a Change Management import or export. The following image shows the Resources tree that appears when you are signed in to WebFOCUS Business User Edition.

The resources are secured using the security model, that is folder-based, similar to that of desktop operating systems. The resources differ for every user. For example, the Basic User sees only public content.

The Resources tree contains the following nodes:

- **Domains.** Lists the domains and folders that you have created. Yellow folders are published folders. Gray folders are unpublished.

- **Favorites.** Lists the items that you have designated as Favorites.

- **Change Management.** Lists the Import and Export facilities.
  - **Import.** Enables users to move a change package into an acceptance test.
  - **Export.** Enables a developer to move changes made to application files, to the user acceptance test environment.

Node Context Menu Options

Each node in the Resources tree has a shortcut menu. The available options include:

- **View.** This option is only available for the Domains node, and includes:
  - **Display By Title.** Displays folders by title. The default display.
  - **Display By Name.** Displays folders by name.
- **New.** This option is only available to managers, and includes:
  - **Domain.** Creates a new domain.

- **Refresh.** Refreshes the tree. The option is available for all nodes.

- **Paste.** Pastes the item under the applicable node.

- **Clear Favorites.** Clears the Favorites list. This option is only available for the Favorites node.

### Quick Links

The Quick Links on the Home page, include links for uploading or connecting to data, creating content, managing domains and users, and configuring your system. It also shows the name of the domain that is currently highlighted in the Resources tree. Whenever you navigate to a different domain, the Quick Links refresh to reflect the new active directory.

The available Quick Links also change depending on the user. Each user only sees the options that they have privileges to access. The following image shows an example of the Quick Links that are available for a Manager.

![Quick Links Image]

### Understanding Domain Content

A domain node is the highest level of folder organization in the Resources tree. All of the domains that a user is authorized to access are displayed in the tree. Domains contain all of the components and content that you can create.
Selecting a Domain

A list of the domain folders, populated from the WebFOCUS Repository, appear in the Resources tree. The items you can access, and the options available to you, are permitted by the Manager of your environment. When the contents of a folder change, such as when you create and save a new report or a report is published, the Resources tree automatically refreshes. You can also use the Refresh button in the toolbar to update the Domain contents.

Identifying Types of Content in the Resources Tree

A domain can contain a wide range of items, including reports, charts, visualizations, documents, dashboards, Internet hyperlinks, schedules, and distribution lists.

These items are located in folders. Both the items and the folder may be private, published, or shared. If you are permitted to create your own reports, you also have the My Content folder. My Content may contain the Custom Reports, Shared Reports, and folders for each My Report report you created.

- **Published content.** Domain content that is published is considered authoritative and has usually undergone quality assurance and testing before being published for the user community.

- **Private content.** This content can be in the following forms:
  - **My Content.** Personal content created by a user. This content remains private to a user unless the user chooses to share it with others or unless an administrative user has the ability to manage private content for that user.
  - **Other private content.** Domain content which is not published. It is accessible only to its owner, which may be a specific user or a group.

When you create a folder, it is private content. Private content appears as a gray folder in the tree. If you share a folder, the folder includes a link icon and is available either to all users, specific groups, or users permitted to access the folder location. If you publish the folder, it appears as a yellow folder in the Resources tree and is available to all users.
Identifying Content in the Resources Tree

The icons located next to each item represent the item type. In the following table, the first column lists the icons, and the second column describes what they represent.

<table>
<thead>
<tr>
<th>Icon</th>
<th>Identifies</th>
</tr>
</thead>
<tbody>
<tr>
<td><img src="image" alt="Folder icon" /></td>
<td>Folder. Allows users to organize their private or published application content.</td>
</tr>
<tr>
<td><img src="image" alt="My Content folder icon" /></td>
<td>My Content folder. Provides the user with a location to create private reports, output, and schedules. This is created when the parent folder has the Auto create My Reports folder property selected and the user is permitted to create private content in a My Content folder. The private content within this folder cannot be published.</td>
</tr>
<tr>
<td><img src="image" alt="Report procedure icon" /></td>
<td>Report procedure. Contains the core language commands to tell the Reporting Server how to create the report.</td>
</tr>
<tr>
<td><img src="image" alt="Visualization icon" /></td>
<td>Visualization. Represents your data graphically, and is comprised of one or more visuals. Visuals can be charts, maps, or grids.</td>
</tr>
<tr>
<td><img src="image" alt="Chart procedure icon" /></td>
<td>Chart procedure. Contains the core language commands to tell the Reporting Server how to create the chart.</td>
</tr>
<tr>
<td><img src="image" alt="Document or dashboard icon" /></td>
<td>Document or dashboard. Customized document or dashboard that contains more than one item.</td>
</tr>
<tr>
<td><img src="image" alt="Schedule icon" /></td>
<td>Schedule. Specifies when to run a report procedure, how to distribute the report (Email, FTP, Managed Reporting, Printer), and the destination to which the report will be distributed. This is available when licensed for the feature that creates schedules.</td>
</tr>
<tr>
<td><img src="image" alt="Distribution List icon" /></td>
<td>Distribution List. Used with a ReportCaster schedule (Email, FTP, or Printer) to specify the email addresses, directory locations, or printers to distribute.</td>
</tr>
<tr>
<td><img src="image" alt="Microsoft Office Excel Worksheet" /></td>
<td>Microsoft® Office Excel Worksheet</td>
</tr>
<tr>
<td><img src="image" alt="Adobe Acrobat PDF file" /></td>
<td>Adobe® Acrobat PDF file</td>
</tr>
</tbody>
</table>
The following topics describe the shortcut menu options for each type of item.

Options for Folders and Items

When you right-click an item, the options displayed in the shortcut menu are determined by the selected item type, and the tools and features you are permitted to access.

Reference: Options for Folders

The following options are available when you right-click a folder:

New

Provides access to the following options:

Report

Opens InfoAssist+, where you can create a report.

Chart

Enables you to create a chart in InfoAssist+.

Document

Enables you to create a document in InfoAssist+.

Visualization

Opens InfoAssist+, where you can create visualizations.

<table>
<thead>
<tr>
<th>Icon</th>
<th>Identifies</th>
</tr>
</thead>
<tbody>
<tr>
<td>GIF image file</td>
<td></td>
</tr>
<tr>
<td>HTML file</td>
<td></td>
</tr>
<tr>
<td>JPG image file</td>
<td></td>
</tr>
<tr>
<td>PNG image file</td>
<td></td>
</tr>
<tr>
<td>SVG image file</td>
<td></td>
</tr>
<tr>
<td>Webpage or a URL to run a report</td>
<td></td>
</tr>
</tbody>
</table>
**Shortcut**
Creates a shortcut to a Repository Resource or a Master File.

**URL**
Launches the Create URL dialog box, where you can create a link to a webpage.

**Distribution List**
Launches the Distribution List tool, where you can create distribution lists.

**Folder**
Creates a new folder.

**Duplicate**
Makes a copy of the item with an underscore and number appended to the title, for example, duplicating Sales_Report creates Sales_Report_1 in the same location. The number is incremented each time a duplicate is created.

**Cut, Copy, and Paste**
Cuts, copies, or pastes the folder and its contents.

**Delete**
Deletes the folder and its contents.

**Change Title**
Launches a dialog box, where you can change the title of a folder. The Title is the value that displays in the tree and does not change the folder Name value.

**Refresh**
Refreshes the content of the folder.

**Upload**
Enables you to upload a data file, document, or image.

**Metadata**
Enables you to create or edit a synonym.

**Publish/Unpublish**
Allows or suppresses public access to the content.

**Show/Hide**
Shows or hides the item.
Security

Provides access to the following option:

Owner

Allows you to set the resource owner, either Published (no specific owner), or a specific group or user.

Properties

Shows the properties of the folder.

Note: The options available for a folder are also available for other types of items.

Reference: Options for Content

Like folders, content, such as report, chart, dashboard, and visualization, have options that include the Duplicate, Cut, Copy, Delete, Change Title, Publish/Unpublish, Show/Hide, Security, and Properties options.

Note: Documents and dashboards have the same options as report and chart procedures with the exception of Publish/Unpublish.

Report and chart procedures also include the following right-click options:

Run

Runs the report procedure or schedule.

Run Deferred

Submits a report procedure or a schedule for deferred execution. This option is not available for visualizations.

Run With SQL Trace

Runs a report and includes an SQL trace of the report results. This option is not available for visualizations.

Schedule

Schedules a report procedure. Scheduling options include Email, Printer, and Repository. This option is not available for visualizations.

Edit

Edits an item with the tool that was used to create it.
**Add to Favorites**

Adds the item to the Favorites folder.

**Note:** The options available for content are also available for other item types.

---

**Reference:** Options for Schedules

Like folders, Schedule options include the Duplicate, Cut, Copy, Delete, Change Title, Security, and Properties options.

Like content, Schedule options include the Edit and Run options.

Schedules also include the following right-click option:

**View Log**

Launches the Schedule Log Options dialog box from which you can select whether to view the most recent log report for the schedule or specify a time range for which to obtain log reports.

---

**Reference:** Options for Distribution Lists

Like folders, Distribution List options include the Duplicate, Cut, Copy, Delete, Change Title, Publish/Unpublish, Show/Hide, Security, and Properties options.

Like content, Distribution List options include the Edit option. The Edit option invokes the Distribution List tools.

---

**Reference:** Options for URLs

Like folders, URL options include the Duplicate, Cut, Copy, Delete, Change Title, Publish/Unpublish, Show/Hide, Show/Hide, Share/Unshare, Share with, Security, and Properties options.

Like content, URL options include the Edit, and Add to Favorites options.

URLs also include the following right-click option:

**View**

Enables you to launch the URL link.

---

**Reference:** Options for Excel Workbooks, PDF, and Image Files

Like folders, these options include the Duplicate, Cut, Copy, Delete, Change Title, Publish/Unpublish, Show/Hide, Security, and Properties options.
These files also include the following right-click option:

**View**

Enables you to download a copy of the file to your browser, which will launch the File Download dialog box to allow you to open or save the file. If you choose open, the file will open in its corresponding application.

**Reference: Options for Favorites**

These files include the following right-click option:

**Remove Favorite**

Removes the Favorite from the list.

**Viewing Folder and Item Properties**

Authorized users can select the Properties option to review information about a folder or item, including when it was created, last modified, title, name, and settings that control the Reporting Server and applications it will access. There are also settings that control the functionality available to users when accessing the folder or running or scheduling an item.
The following image displays the Properties dialog box for an item.

The Main Properties tab includes the following settings:

- **Language.** Provides a list of languages that you can select.

- **View All.** Opens the Language Properties dialog box, where you can select a language.

- **Title.** Displays the value in the tree, so users use to identify the content within the folder.

- **Folder/File Name.** Displays a unique reference to the folder or item within the folder. Select the Change Name check box to change the name of the folder or item.

- **Summary.** Provides a detailed explanation with additional information about the folder or item.

- **Parent Folder.** Shows the previous folder in the folder path of the WebFOCUS repository.
- **Full Path.** Displays full path of the folder or item in the WebFOCUS repository.
- **Created On.** Identifies the date the folder or item was created.
- **Created By.** Identifies the user who created the folder or item.
- **Last Modified On.** Shows the date the folder or item was last modified.
- **Last Accessed On.** Shows the date the folder or item was last opened.
- **Last Accessed By.** Identifies the user who last opened the folder or item.
- **Properties.** Shows a string of name value pairs that identify the properties of the folder or item.
- **Size.** Displays N/A bytes for folders. For items, displays the size in bytes.
- **Run.** Displays N/A, as this property is not applicable to folders. For items, displays Immediate.
- **Sort Order.** Specifies the order to list the folder in the tree or list items within a folder.
- **Status.** Indicates whether the folder or item is Published or Private. Private will also display the owner information.

Authorized users can view or edit the access rules, effective policy, or sharing permissions by clicking **Security**.
The Details tab, shown in the following image, displays the components of the item in a tree structure to allow a user to review the request information prior to running or opening the item in a tool. The tree structure displays the request components, such as folders, Master Files, Data Elements, Sorts, Conditions, Expressions, Output Formats, and Joins, which can be opened to show the fields referenced.
The Advanced tab, shown in the following image, allows you to set default height and width values for the item, when it is displayed inside a portal at run time.

Navigating the Administration Console

The Administration Console contains four tabs and a menu bar that help you navigate to its settings and other features.

These tabs organize administration activities into the following categories:

- **Configuration.** Configures Reporting Server connections, Application Settings, Custom Settings, NLS Settings, Redirection Settings, the Dynamic Language Switch, and InfoAssist+ Properties.
- **Security.** Configures general security settings for Internal and External Authentication.
- **ReportCaster.** Opens the ReportCaster Console where you can configure ReportCaster, restart the Distribution Server, configure environment parameters, and turn traces on and off. The Administration Console authenticates to ReportCaster with the value of the user ID, IBIMR_RC_SVCUSER. If this authentication fails, users are prompted for their credentials.
- **Diagnostics.** Displays component installation and configuration details, turns session logging on or off, and enables Managers to view or delete log files.

You can view traces with the Session Viewer, which is accessible from the Tools option on the Menu bar in the Portal.
Options on the menu bar connect you to such basic tasks as reviewing WebFOCUS BUE and third-party licensing information, clearing the cache, closing the Administration Console, or opening Help.

To update or review an Administration Console setting, click a tab, and then click the folder or page icon from the main menu on your selected tab. The main window refreshes and the individual settings assigned to your selected page become available.

**Navigating the Configuration Tab**

The Configuration tab contains settings and features that describe Reporting Server connections and other application settings, which are listed and described in the following table.

<table>
<thead>
<tr>
<th>Folder [Page]</th>
<th>Available Functionality</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Reporting Servers</strong></td>
<td>The Reporting Servers subfolders contain the tools that manage all connections from the client to remote servers. Using the following sub-folders, you can:</td>
</tr>
<tr>
<td></td>
<td>- <strong>Server Connections.</strong> Add and change Remote Services settings. In the Business User Edition, this feature is limited to the main reporting server, EDASERVE.</td>
</tr>
<tr>
<td></td>
<td>- <strong>Alternate Server Mappings.</strong> Configure alternate mappings to individual Remote Servers. This feature is not available in the Business User Edition.</td>
</tr>
<tr>
<td><strong>Configuration</strong></td>
<td>Pages in the Application Settings folder of the Configuration tab manage settings for the WebFOCUS BUE application. Pages in this folder include settings for the following functional areas:</td>
</tr>
<tr>
<td><strong>[Application Settings]</strong></td>
<td>- Change Management</td>
</tr>
<tr>
<td>Folder [Page]</td>
<td>Available Functionality</td>
</tr>
<tr>
<td>-------------------------------------</td>
<td>-------------------------------------------------------------------------------------------------------------------------------------------------------</td>
</tr>
</tbody>
</table>
| **Configuration** [Custom Settings] | The Custom Settings page of the Configuration tab contains a text-based input field where you can define advanced customization settings for the Client. Using this page, you can:  
  - Customize Client settings.  
  - Create a Client site profile.  
  - Create a Client universal profile. |
| **Configuration** [Dynamic Language Switch] | The Dynamic Language Switch page of the Configuration tab contains a list of languages that can be included in this feature.  
In the Business User Edition, Dynamic Language Switch settings are stored in the ibimultilanguage.js file located in the `drive:/ibi/WebFOCUS_BUE82/WebFOCUS/ibi_html/javaassist/intl` directory. |
| **Configuration** [Redirection Settings] | The Redirection Settings page of the Configuration tab contains settings that manage the redirection of report output. |
| **Configuration** [InfoAssist+ Properties] | The InfoAssist+ Properties page of the Configuration tab contains properties that configure reporting options in the InfoAssist+ reporting tool. |
Navigating the Security Tab

The Security tab contains internal and external security settings, which are listed and described in the following table.

<table>
<thead>
<tr>
<th>Folder [Page]</th>
<th>Available Functionality</th>
</tr>
</thead>
<tbody>
<tr>
<td>Security Configuration [Internal]</td>
<td>The Internal page of the Security tab contains login and password settings for authentication and authorization managed within WebFOCUS BUE.</td>
</tr>
<tr>
<td>Security Configuration [External]</td>
<td>The External page of the Security tab contains settings that define the method and location of authentication and authorization activities managed by third-party applications outside of WebFOCUS BUE.</td>
</tr>
</tbody>
</table>

Navigating the ReportCaster Tab

When you click the ReportCaster tab, the ReportCaster Server Status page opens, by default. Features on that page identify the current status of ReportCaster Server operations.
Navigating the Diagnostics Tab

The Diagnostics tab contains settings and features that describe system performance and activities, which are listed and described in the following table.

<table>
<thead>
<tr>
<th>Folder [Page]</th>
<th>Available Functionality</th>
</tr>
</thead>
<tbody>
<tr>
<td>Diagnostics</td>
<td>The Diagnostics section of the Administration Console contains the following functional areas:</td>
</tr>
<tr>
<td></td>
<td>- <strong>Client Verification.</strong> Displays your directory permissions and the status of your ability to perform common WebFOCUS and WebFOCUS Client operations.</td>
</tr>
<tr>
<td></td>
<td>- <strong>HTTP Request Info.</strong> Displays information about HTTP request headers.</td>
</tr>
<tr>
<td></td>
<td>- <strong>JVM Property Info.</strong> Displays information about your Java VM environment.</td>
</tr>
<tr>
<td></td>
<td>- <strong>Session Monitor.</strong> Displays session monitor events and links to detailed traces.</td>
</tr>
<tr>
<td></td>
<td>- <strong>Log Files.</strong> Displays links to WebFOCUS log files.</td>
</tr>
</tbody>
</table>

Reviewing Version Information

The About WebFOCUS page displays information about the release you are using and the optional components installed with it, as shown in the following image.

![About WebFOCUS Image](image-url)
You can use the information on this page to identify your current product release and service pack when corresponding with the Information Builders Customer Support team.

When you click About WebFOCUS, the following information appears in the main window:

**Product Release.** Release number, for example, 8.2.

**Service Pack.** Service pack number, for example, 0.0.

**Package Name.** Installation file package name, for example, wb022316a.

**Release ID.** Product release number, for example, 8200.

**Build/GEN Number.** Specific product build number, for example, 15.

**Build/GEN Date.** Date and time the build number was generated, for example, February 23, 2016 10:28:10 PM EST.

**Application Server.** Application Server, for example, Apache Tomcat/8.0.21.

This version of the About WebFOCUS page, that opens from the Diagnostics tab, is only available to those users whose privileges allow them to open and review the Administration Console.

However, the information on this page is also available to those users whose privileges allow them to view the About WebFOCUS Business Intelligence window. To open this other window, in the BUE Portal, on the Menu bar, click Help, and then click About.

**Reviewing Client Verification**

The Client Verification page displays the current status of client configuration and application settings. When you open this page, the client automatically conducts the test required to verify that configuration and application settings are open and available.

Settings marked pass are available for use. Settings marked fail are not available for use.

The automated verification process includes checking web server aliases and directory permissions for each type of client communication mode (CGI, WFServlet, or ISAPI).

The Client verification tools, by default, place the verification logs in the `drive:\ibi\WebFOCUS_BUE82\WebFOCUS\logs` directory. These tools test read, write, and remove permissions for the logs directory. They also test read and write permissions for the `drive:\ibi\WebFOCUS_BUE82\WebFOCUS\config` directory.
To test a Reporting Server connection and the current status of the Graph or Table functionality it can deliver, you must open the Configuration tab, and right-click the icon for the Reporting Server you wish to test. All three tests are available on the shortcut menu assigned to each server icon.

**HTTP Request Headers and JVM Property Information**

The Diagnostics tab also contains information about HTTP request headers and your Java VM environment.

- Settings on the HTTP Request Info page display information about the HTTP or HTTPS headers returned to your browser. This is useful for troubleshooting and configuring HTTP headers, especially if you integrate web or application server security with WebFOCUS BUE, or if your web or application server uses virtual hosts (HTTP headers).

- Settings on the JVM Property Info page display information about your Java VM environment. This is useful for troubleshooting and configuring the Java environment for WebFOCUS BUE web applications and for resolving memory or resource issues.

**Navigating the InfoAssist+ Interface**

InfoAssist+ provides an intelligent, flexible layout for creating reports, charts, visualizations, and documents.

The application window provides intuitive menus and toolbars, a versatile ribbon that provides access to specialized groups for different functional areas of report design, a taskbar for selecting output, and a status bar for directing output.

The application window also provides a resources area for selecting and sorting data, and a multi-faceted results area that can display report design, a preview of report output, or actual report output.
InfoAssist+ Application Window

The components of the InfoAssist+ Application window are shown in the following image.

The main interface components are explained as follows:

1. **Application button.** Provides access to the Application menu of procedure-related commands.

2. **Quick Access Toolbar.** Displays frequently-used commands, such as New, Open, Save, Undo, Redo, View code, Run, and Preview, in a toolbar that remains visible. For more information, see *Quick Access Toolbar* on page 63.

3. **Ribbon.** Displays the commands you need to create reports, charts, visualizations, and documents. It also displays the Help menu. For details, see *Ribbon* on page 64.

4. **Help.** Provides access to the online technical content for InfoAssist+ in a new browser window.

5. **Resources panel.** Displays the Data pane, Query pane, and Filter pane.

6. **Canvas.** Displays the results of your report. In Live Preview mode, the canvas displays a preview of the file as it is developed.
Depending on the type of file that you are developing, the canvas may display differently. For example, when creating a document, the canvas includes rulers around the development area. This is to assist you in placing the components on to the document.

7. **Navigation taskbar.** Displays groups and icons that provide different views and quick access to all active reports and report output. For details, see *Using the Navigation Taskbar* on page 74.

8. **Status bar.** Provides an output format button that you click to see the selected format and an output target button that you click to view the selected option for displaying new output windows or tabs. For more information, see *Using the Status Bar* on page 75.

**Application Main Menu**

In the upper-left corner of the InfoAssist+ interface, click the IA button to open the Application main menu.

You can run the following commands from the Application main menu:

- **New.** Opens the InfoAssist+ splash screen, where you can create a new report, chart, visualization, or document. The exact functionality of the New command depends on your current InfoAssist+ session.

  When you open a new session of InfoAssist+ and then click New, a new report is created. You are prompted to choose a data source.

- **Open.** Opens an existing report, chart, visualization, or document.

- **Save.** Saves a report, chart, visualization, or document.

- **Save As.** Saves a report, chart, visualization, or document with a new name.

- **Run.** Runs a report, chart, visualization, or document.

- **Run Deferred.** Submits a report, chart, or document for processing in the background while you continue to work on other tasks.

- **Close.** Closes the currently active report, chart, visualization, or document.
Recent Items. Displays recent reports, charts, visualizations, and documents and those items that have been pinned to the menu. The Recent Items area of the InfoAssist+ Application main menu is shown in the following image.

Pinned reports, charts, visualizations, and documents are represented by a blue pin icon. Pinned items appear at the top of the list in alphabetical order.

Recent reports, charts, visualizations, and documents are represented by a sideways blue pin icon. Recent items appear below the separator bar in the order in which they were created, with the most recently created item at the top.

You can pin important reports, charts, visualizations, and documents to the top of the Recent Reports section of the Application main menu for quick and easy access. To promote a recent report to pinned report, click the sideways blue pin icon. The icon turns upright and the report is moved to the pinned report area of the Recent Items window, where it stays until it is unpinned.

To demote a pinned report, click the blue pin icon. The icon turns sideways and the report is moved below the separator bar.
A shortcut menu is available when right-clicking a recent item, as shown in the following image.

The options in the menu are:

- **Open.** Opens the selected report, chart, visualization, or document.

- **Pin to list.** Pins or unpins a recent report, chart, visualization, or document to the pinned reports list above the separator bar.

- **Remove from list.** Unpins a pinned report, chart, visualization, or document from the pinned reports list.

- **Clear unpinned list.** Clears all unpinned reports, charts, visualization, or documents from the Recent Items list.

- **Options.** Opens the Options window to customize your user preferences.

- **Exit.** Exits the application.

**Reference:** **Open Dialog Box**

The Open dialog box displays when you launch InfoAssist+. It also displays when you join and blend data. You can use this dialog box to do the following:

- Select data sources for creating reports, charts, visualizations, and documents.
Select data sources for joining and blending data.

Configure data adapters for connecting to an existing database and creating synonyms.

Upload user data.

The Open dialog box contains the following options:

**Connect to Data**

Opens the Connect to Data wizard, where you can configure a Data Adapter to connect to an existing database and create synonyms.

**Upload Data**

Opens the Upload wizard, where you can upload user data from a machine to which you have access. This data can be used with WebFOCUS reporting.

**Open**

Opens the selected Master File.

**Quick Access Toolbar**

The Quick Access Toolbar provides access to the most commonly used functions. It is located to the right of the Application main menu button and is always visible no matter which options are selected.

**Undo and Redo.** The Undo icon undoes your last action. The Redo icon repeats your last action.

The Undo icon is enabled (blue) when there is an action to undo. Otherwise, the icon is unavailable (gray). The Redo icon is enabled (blue) when there is an action to redo. Otherwise, the icon is unavailable (gray).

For example, if you add a database field to a report, the Undo icon turns blue. You can now click the Undo icon to remove the database field from the report. The Undo icon turns gray, and the Redo icon turns blue. To restore the field to the report, click the blue Redo icon.

You can also press Ctrl+Z to undo an action, or Ctrl+Y to redo an action.

You can undo and redo up to 25 actions per session. InfoAssist+ maintains the undo and redo list of actions even when you switch between reports.

When a dialog box is open in the application window, you cannot use the Undo and Redo icons. However, when you click OK and close the dialog box, the icons become available for use. With a single click of Undo, you can undo all the actions that you performed in the dialog box, and you can reinstate them with a single click of Redo.
**View code.** View the underlying code for the report.

**Run.** Click the Run button to run a report, chart, visualization, or document immediately. Click the down arrow to open the Run menu, which contains the following additional options:

- **Preview.** Runs the report, chart, or document in the selected format with the limited number of records as set in the Design group on the Home tab.

- **SQL Trace.** Returns the SQL commands for the request.

- **SQL Preview Trace.** Returns the SQL commands for the Live Preview run.

**Ribbon**

The ribbon is a rectangular area of distinct groups of buttons that spans the top of the InfoAssist+ application window.

The ribbon is contextual and changes depending on the type of file that you are developing. For example, in Chart mode, the ribbon is made up of nine tabs, whereas when working in Visualization mode, the ribbon consists of five tabs. Each tab contains a subset of InfoAssist+ functionality organized in logically-related groups of controls and commands graphically represented by distinctive icons.

**Working With the Ribbon**

The ribbon contains two types of arrow-based buttons. The first type of button opens a menu when you click it. The Orientation button is an example of this type of button. Clicking the Orientation button opens a menu of options, as shown in the following image.

![Orientation Button](image)
The second type of button is a split button. Clicking the left side of the split button performs a default action. Clicking the down arrow, on the right side of the button, opens a menu of options. The Header & Footer button is an example of a split button. It is shown in the following image.

![Header & Footer button](image)

Clicking the Header & Footer button on the left opens the Header & Footer dialog box. Clicking the down arrow on the right opens a menu of options.

Some options open dialog boxes of additional commands and option lists.

The ribbon displays all controls and commands using different sized icons and groups, depending on the size of the monitor and application window.

When you reduce the size of the application window, some groups are collapsed into single icons as determined by the amount of available space.

When a group is collapsed into a single icon, the individual icons are removed from view, but are still available. Clicking a collapsed group icon restores the group to its normal full size and displays all of the individual icons.

When expanding a collapsed group, the ribbon collapses a neighboring group to make enough room to expand the selected group.

When an icon, button, or option in a menu or dialog box appears dimmed, that functionality is not available for that report as it currently exists. Some functionality is available for reports only, charts only, visualizations only, or documents only.

In some situations, selecting one or more options makes other options incompatible with the previously selected ones. As a result, the incompatible options are dimmed and unavailable for selection. InfoAssist+ automatically makes incompatible options unavailable as you create and modify a report.

**Note:** If you do not have access to a particular option, contact your administrator.
**Home Tab**

The Home tab contains the most commonly used commands and options, which you can use when developing reports, charts, documents, or visualizations. The following list highlights the features on the Home tab for each mode.

- For reports, the Format, Design, Filter, and Report groups offer options for changing the output format of your report, as well as styling it.

- For charts, the Format Design, Filter, and Report groups enable you to change the theme or your chart or add a header and footer.

- For documents, options are enabled in the Format and Design groups only. Available options for documents include changing the data source for the document and changing the output format.

- For visualizations, the Clipboard, Data, Visual, and Storyboard groups enable you to perform some of the more basic functions, such as copy and paste. You also use the Home tab to change your visual type.

**Related Information for Reports, Charts, and Documents:**

- Using Filters to Customize the Display of Data

**Related Information for Visualizations:**

- Building Visualizations

- Using Storyboards

- Joins

**Insert Tab**

The Insert tab contains options to add reports, charts, existing reports, text, images, and active form controls (for active reports only) to a canvas in Document mode.

**Note:** The Insert tab is only available in Document mode.

**Related Information for Documents:**

- Building a Document
**Format Tab**

The Format tab provides options for formatting your report, chart, document, or visualization. Depending on the mode you are using, you can perform tasks such as selecting a chart type, enabling Auto Linking, or adding navigational aspects to a report.

The following list highlights the features on the Format tab for each mode.

- For reports, the Format tab provides access to the Destination, Navigation, Features, and Auto Linking groups. These options enable you to perform many functions related to reports, including Auto Drill or any other report navigation feature.

- For charts, the Format tab provides access to the Destination, Chart Types, Features, Labels, Interactive, and Navigation groups. These options enable you to perform a variety of charting tasks, including changing the chart type and adding interactive options.

- For documents, the Format tab enables you to change to report or chart mode. You can also access InfoMini.

- For visualizations, the Format tab provides access to the Report, Features, Label, and Interactive groups. These options enable you to format your visualization. Also included are grid commands, as well as various features and label commands.

**Related Information for Reports, Charts, and Documents:**

- Customizing Reports
- Formatting a Series
- Formatting Data Labels
- Formatting a Legend
- Style and Customize a Report
- Style and Customize a Chart

**Related Information for Visualizations:**

- Building Visualizations
- Customizing Charts and Visualizations

**Data Tab**

The Data tab contains data manipulation and data display options. For example, you can access Join functionality and work with Defines and Computes. The Data tab is available in the report, chart, and document mode. It is not available in visualization mode.
The following list highlights the features on the Data tab for each available mode.

- For reports, the Data tab provides access to the Calculation, Join, Filter, Display, and Data Source groups. When working with reports, you can join data sources or create Defines and Computes. You can also filter data.

- For charts, the Data tab provides access to the Calculation, Join, Filter, Display, and Data Source groups. When working with charts, these options enable you to join data sources, create a Define or Compute, and filter data.

- For documents, the Data tab provides access to the Calculation, Join, Filter, Display, and Data Source groups. When working with a document, you can create a define or join data sources. You can also add or switch data sources.

**Related Information for Reports, Charts, and Documents:**

- Joins

- Using Filters to Customize the Display of Data

**Slicers Tab**

The Slicers tab provides the ability to create and edit slicers. Slicers are dynamic filters that you can use with reports, charts, and documents.

**Note:** The Slicers tab is unavailable in visualization mode.

The features on the Slicers tab are the same for reports, charts, and documents. You can perform the following functions with the slicer functionality:

- Add slicers to your report, chart, or document to create dynamic filters
- Set a record limit for the display of your data
- Create groups of slicers to filter your data
- Add fields to existing slicers
- Clear slicers to clear all selected values from existing slicers

**Related Information for Reports, Charts, and Documents:**

- Creating Slicers

**Note:** The slicer capabilities are only available in the full version of InfoAssist+.
Layout Tab

The Layout tab provides access to page display and layout options. These include page orientation and AutoFit, which is a feature that limits the width of columns in a report to be no wider than the largest value in each column.

The Layout tab is available in report, chart, and document mode.

**Note:** The Layout tab is unavailable in visualization mode.

The following list highlights the features on the Layout tab for each available mode.

- For reports, the Layout tab provides access to the Page Setup and Report groups. These options allow you to change the size or orientation of your report. You can also add page numbers.

- For charts, the Layout tab provides access to the Page Setup and Size & Arrange groups. These options allow you to change the orientation or size of your chart. You can also set a height and width for your chart, and enable the AutoFit functionality.

- For documents, Layout tab provides access to the Page Setup and Size & Arrange groups. You can change the size of your document and adjust its orientation. You can also lock the height and width aspect ratio of your document.

**Related Information for Reports, Charts, and Documents:**

- Customizing Reports

View Tab

The View tab provides access to reporting options, including design and display options. Some of the options on the View tab control how information is displayed, whether it be in structured view or list view. The View tab is available in all modes of InfoAssist+.

The following list highlights the features on the View tab for each mode.

- For reports, the View tab provides access to the Design, Show/Hide, Data Panel, Query panel, Output Window and Report groups. When creating your report, you can change the way your data displays or switch to another mode, such as document.

- For charts, the View tab provides access to the Design, Show/Hide, Data Panel, Query panel, Output Window and Report groups. When creating your chart, you can change the output location for the chart or switch to another report or chart.
For documents, the View tab provides access to the Design, Show/Hide, Data Panel, Query panel, Output Window and Report groups. When working with your document, you may want to change the display of data in the Data pane or Query pane.

For visualizations, the View tab provides access to the Show/Hide and Data Panel groups. When creating your visualization, you can use these options to show or hide the resources panel. You can also change the display of your data to either logical, list or structured.

**Related Information for Reports, Charts, and Documents:**

- Using the Query Pane and Filter Pane on the Canvas on page 72

**Field Tab**

The Field tab is enabled in the ribbon when you select a data source field. The options available in the Field tab are specific to the data type that is selected. The options available for numeric fields are different from the options available for non-numeric and date fields. The Field tab provides access to the Filter, Sort, Break, Style, Format, Display, and Links groups.

The following list highlights the features on the Field tab for each mode.

- For reports, the Field tab provides options for filtering and styling your report. It also provides you with access to the Traffic Lights and Within functionality, making your reports more robust and customized.

- For charts, the Field tab enables you to hide a particular field or group values in your chart. You can also use the filter options to limit the display of information in your chart.

- For documents, the Field tab provides options for filtering, as well as Traffic Light functionality. You can also hide fields and add aggregations.

- For visualizations, the View tab provides access to the Show/Hide and Data Panel groups. When creating your visualization, you can use these options to show or hide the resources panel. You can also change the display of your data to either logical, list or structured.

**Related Information for Reports, Charts, and Documents:**

- Apply Traffic Light Conditional Styling to a Report (By Constant)
- Apply Traffic Light Conditional Styling to a Report (By Field)
- Changing a Field Format
**Series Tab**

The Series tab provides access to chart options through the Select, Style, Properties, Line, and Pie groups. The Series tab is available in document, chart, and visualization mode. It is not available in report mode.

The following list highlights the features on the Series tab for each available mode.

- For charts, the Series tab enables you to add such features as a trendline or data labels to your chart. If multiple series are specified, you can select a series and specify options specific to that series.

- For documents, the Series tab displays once you have specified fields within your document or embedded chart. You can use the options on the Series tab to add markers, smoothlines, or trendlines to your data.

- For visualizations, the Series tab enables you to switch between series, style the selected series, or add any other property or line features, as required.

**Related Information for Reports, Charts, and Documents:**

- Formatting a Series
- Formatting Data Labels

**Related Information for Visualizations:**

- Formatting Axis Labels

**Understanding the Canvas**

The canvas displays a preview of the report being created or modified on the canvas when you are in the default Live Preview. To select Live Preview, go to Home tab, and in the Design group, click Live Preview, or on the View tab, in the Design group, click Live Preview. The canvas is always fully maximized and cannot be minimized, cascaded, or tiled. However, a blank canvas opens when there is no report.

The canvas displays either live data or sample data.

- To display live data, on the Home tab, in the Design group, click Data from Source (default).
  
  When you select Data from Source, a live preview of the report being built is refreshed on the canvas as you add, remove, and style data source fields in the report.

- To display sample data, on the Home tab, in the Design group, click Use Sample Data.

  When you select Use Sample Data, the canvas displays sample data based on the field type, with the same formatting and styling used to display live data.
When you execute a report, the canvas displays the Output window. If the Output is minimized, or if there is no report to preview, the canvas is blank. To change the canvas view, you can select Query Design view or Live Preview from the Design group of the View tab or Home tab.

When working with a report in Live Preview, you can rearrange the columns of the report by dragging them to the left or right, depending on your display preference. If the column is numeric, you are presented with the option to Drop as Sum or Drop as Sort.

**Note:** If you select *Drop as Sort*, the values are listed individually and they are sorted. If you select *Drop as Sum*, the values are summed for that particular row. The default is Drop as Sum.

When placing the column in a new location, a red indicator bar displays, indicating the location of placement for the moved column. This allows you to see where the column will be placed before you actually perform the operation.

**Note:** Column sort order can also be rearranged by dragging the fields in the Query field containers of the Query pane to reorder them.

If you create a filter, then the filter appears in the Filter pane.

**Using the Query Pane and Filter Pane on the Canvas**

If you click Query on the Home tab, in the Design group, the Query and Filter panes expand in to the canvas.

This provides a larger area for displaying the Query and Filter panes. This feature is useful when you are designing a report with multiple filters or numerous fields.

Depending on whether you are creating a report or a chart, the Query pane displays selected data source fields using different types of Query field containers.

**Related Information:**

- Using Filters to Customize the Display of Data
- Using Field Containers on page 81

**Understanding Output Options**

When you run a report, the output appears, either in a tab on the canvas, or in a new browser window. You can create and display output in several different ways, depending on the following options. You can select these options on the View tab, in the Output Window group:

- Cascade
Output window and tab options are also available in the status bar, and output window display options are also available in the Navigation taskbar.

**Note:** When you run a report, tab focus is not on the output window and pressing the Tab key does not move the selection. To move the Tab focus out of the output window, press F6.

**Reference:** **Output Target Options**

The following are output target options that you can select.

- **Single Tab.** When you click *Single Tab* and run a report, a new output window is created on the canvas, a report instance is created, and an output tab is placed on the Navigation taskbar. As you modify a report, the same output window is refreshed each time the report is run. This option, which is the default, is ideal when you are working with just one report.

- **New Tab.** When you click *New Tab*, each time you run a report, a new output window is created on the canvas. A new report instance is also created and preserved by the addition of a new output tab on the Navigation taskbar. Each output tab maintains the output of the report that generated the corresponding output window. Selecting an output tab on the Navigation taskbar loads the associated output instance into the output window.

- **Single Window.** When you click *Single Window* and run a report, a new browser window is opened and populated with the report output. As you modify the report, the same browser window is refreshed each time the report is run. If the browser window is closed and the report is run, a new browser window is opened again and is refreshed for each subsequent run. The output is not displayed on the canvas, and an output tab is not added to the Navigation taskbar.

- **New Window.** When you click *New Window*, each time you run a report, a new browser window is opened and populated with the report output. The output is not displayed on the canvas, and an output tab is not added to the Navigation Taskbar.
Reference: Output View Options

The following are output view options (Arrange) that you can select.

- **Cascade.** When you click Cascade, if multiple output windows exist, they are cascaded diagonally across the canvas. This option does not affect open browser windows when you select New Window or Single Window.

- **Tile Horizontally.** When you click Tile Horizontally, if multiple output windows exist, they are tiled horizontally, one above another, across the canvas. This option does not affect open browser windows when you select New Window or Single Window.

- **Tile Vertically.** When you click Tile Vertically, if multiple output windows exist, they are tiled vertically, side by side, across the canvas. This option does not affect open browser windows when you select New Window or Single Window.

- **Switch Output.** When you click Switch Output, a drop-down menu opens, where you can select any active report to view the output. The selected report is loaded into the output window or browser window, depending on the selected output window or tab option.

Reference: Output Format Options

The Output window can display report output in the following formats: HTML, HTML5, active report, and PDF.

*Note:* Excel and PowerPoint formats open in their native programs in a window external to InfoAssist+

Using the Navigation Taskbar

The Navigation taskbar provides quick access to all active output windows and to the report design that generated the output. You can return to the last report that you edited in the Query pane by clicking Display Design View on the taskbar. The Navigation taskbar is always visible. It is located near the bottom of the application window, just above the status bar.

Each of the active output windows displays a tab on the Navigation taskbar. Selecting the tab displays that output window on the canvas. If you save a report with a unique name each time you modify it, when the report is executed and a new output window is generated, the unique name appears as a tab on the taskbar. If you continue to modify and execute a report without saving it with a unique name, a number in parentheses is appended to the original, saved report name to differentiate it among the multiple output windows.
The ability to select report output from the Navigation taskbar depends on the output window option selected from the status bar or from the Output Window group of the View tab. For more information, see Using the Status Bar on page 75, or Understanding Output Options on page 72.

Each report tab on the Navigation taskbar has a shortcut menu with the following options:

- Restore
- Minimize
- Maximize
- Close
- Auto Resize

Restore, Minimize, Maximize, and Close are standard options available in any browser window or software application. Minimize, Maximize (if the window is not maximized), or Restore (if the window is maximized), and Close can also be found in the top-right corner of the output window.

The Auto Resize option enables automatic resizing of an output window as needed when you add or remove fields.

The Window Options menu at the far left of the Navigation taskbar provides options for displaying all active output windows on the canvas. The display options that you can select are Cascade, Tile Horizontally, Tile Vertically, Restore All, Minimize All, Maximize All, or Close All. The name of each active output window appears at the bottom of the menu.

The Window Options menu options are directly linked to the options available in the Output Window group of the View tab.

**Using the Status Bar**

The status bar displays the status of the last selected action, a reports button that shows the number of open reports, an output format button that shows the selected format, as well as a list of the available formats, and an output target button that shows the selected option for displaying new output windows or tabs.

When you click the reports button, a menu opens, with options for selecting any of the open reports. Each report is listed by name and an icon which represents the report type (report, chart, visualization, document). The report you select becomes active.

When you click the output format button, a menu opens, with options for selecting a different output format. For a complete list of options, see Understanding Output Options on page 72.
When you click the output target button, a menu opens, with options for Single Tab (default), New Tab, Single Window, and New Window. For more information, see Understanding Output Options on page 72.

**Understanding the Resources Panel**

The Resources panel is comprised of the Data pane, the Filter pane, and the Query pane. It is located on the left side of the InfoAssist+ interface and is visible by default. You can customize how the Resources panel displays by using the options on the Home tab and View tab. For example, on the View tab, in the Design group, click Query to display only the Query and Filter panes.

The Data pane, which contains all the fields from the selected data sources, is always displayed. You can manually adjust the size of the Resources panel. To do so, move the mouse pointer over the border. When the pointer changes to a two-way arrow, drag the border.

**Reference:** Field Image List

In the Resources panel, each field has an image associated with it. The following table displays each image and describes what it represents.

<table>
<thead>
<tr>
<th>Note: This list of icons changes based on the type of database that is in use.</th>
</tr>
</thead>
</table>

**Reference:** Filter Pane

The Filter pane displays all filters that have been created for the selected report.

For more information on filtering, see Field Tab on page 70 and Data Tab on page 67.

<table>
<thead>
<tr>
<th>Note: The Filter pane displays all created filters, both active (included) and inactive (excluded).</th>
</tr>
</thead>
</table>

**Using the Data Pane**

The Data pane contains the data fields that are used to construct reports, charts, or visualizations. The default structure of data in the Data pane displays your data by field type, for example, measure field or dimension field. You can explore this structure using the sample retail database that is included with InfoAssist+. The structure of this sample database, which is a cube database, includes measure groups, measure fields, dimension hierarchies, dimension fields, and attributes.
The fields in the database structure are displayed in Logical view, by default. You can use the commands in the View tab to change how your data fields are organized in the Data pane. These commands display the data fields in a Logical, List, or Structured view. All three views provide options for displaying each data source field as a Title, Description, Field, or Alias. The List view also includes options to show the Alias, Format, and Reference of each field.

Field list search functionality is also available in the Data pane, which you can use to search for specific fields within a tree or list. When conducting a search in the Tree view, the search functionality searches only the attribute that is displayed.

When searching in List view, all attributes are searched at once.

**Note:** There are additional options on which you can search, including Name, Title, Alias, Format, Segment, Filename, Description, and Reference.

As you enter search criteria, InfoAssist+ begins the search process. When you enter just a few letters, the list of records that is returned is typically long. As your search criteria gets more specific, the list of returned fields narrows.

If you are conducting a search that you wish to cancel, click the X icon in the field list search tool to abort the search.

**Note:** The X icon displays only when you have search criteria specified in the Search fields box.
The following is an example of the default Logical view, displaying the Title of each field.

![Data Pane Example](image)

### Using the Data Pane to Add Fields to a Report

There are several ways that you can add data source fields to a report. You can drag, double-click, or right-click data source fields in the Data pane to add them to a Query field container or the Filter pane.

After you add data source fields to a Query field container, you can change the order of the fields by dragging and dropping one field above or below another field.

**Drag.** This method provides the most control. You can drag data source fields from the Data pane to the appropriate Query field container or Filter pane.

For a larger work area in which to drop data source fields in the appropriate Query field container, make sure that Query Design view is selected, and then, on the View tab, in the Query Panel group, click Areas 2x2 or Areas 1x4.
You can select Query Design view on the Home tab, in the Design group, by clicking Query or on the View tab, in the Design group by clicking Query. That selection expands the Query and Filter panes.

**Multi-Select.** You can multi-select data source fields that you want to add to a report in Live Preview, Query Design view, and Document mode. To select multiple data source fields to add to a report, click the appropriate fields while holding the Ctrl key on the keyboard. You can drag fields onto the canvas, or add them to the Query field container.

**Double-Click.** To automatically add a field to the appropriate Query field container in the Query pane, you can double-click a data source field in the Data pane.

- When you double-click a measure field in the Data pane, it is automatically added to the Sum Query field container.
- When you double-click a dimension field in the Data pane, it is added to the By (Row Label) Query field container for a report, or to the X-axis Query field container for a chart.

You cannot automatically add a field to the Across (Column Label) Query field container for a report, or to the Legend (Series) and Multi-graph Query field containers for a chart.

**Right-Click.** You can right-click a field in the Data pane to add it to the Filter area or a Query field container in the Query pane. For reports, the available shortcut menu options are as follows:

- **Across.** For dimension fields.
- **Add to Query.** Opens a menu of available Query field containers, to which you can add your data.
- **Create Group.** Allows you to create a group of elements based on the field data type that you select.
- **Include as Category Axis.** For dimension fields.
- **Include as Coordinated.** Only available in Document mode.
- **Include as Legends Series.** For dimension fields.
- **Filter.** For all types of fields.
- **Slicers.** For all types of fields.
- **Sort.** Adds the field to the Sort field container. This is for all types of fields.
- **Sum.** For measure fields.
A measure is a numeric value, such as Gross Profit or Cost of Goods Sold, that you may want to aggregate. All numeric values that can be summed are measures. Numeric fields that cannot be summed, such as product number and miles per gallon, are not treated as measures. Instead, they may be used in the same way as dimension fields to analyze measures. It is up to you to understand your data and determine whether each numeric field can be summed. Related measures can be organized into measure groups. For example, Gross Profit and Cost of Goods Sold can be part of a Sales measure group.

A dimension is a way to categorize data. You can use a dimension to analyze and compare measures. Generally, any field that is not a measure, usually an alphanumeric field such as product, is a dimension. Dimensions can be organized into hierarchies to define the relationships between the fields in the hierarchies. For example, a Geography hierarchy can contain the Continent, Country, State, and City dimensions. You can also define dimension fields that are not part of a dimension hierarchy.

Using the Query Pane and Filter Pane

The Query and Filter panes appear below the Data pane, except when you select Query Design view, which expands the size of the Query and Filter panes. There are different Query field containers for reports and charts.

**Note:** If you have more than one item in either Sum, By, or Across Query field containers (for reports) or Measure (Sum) or X-axis Query field containers (for charts), you can drag them up or down in the Query pane to rearrange the order in which they display in your report or chart. When you drag fields to rearrange them, an indicator line displays, providing guidance as to where the field will be placed. The color of this line is determined by the theme. Once you have performed the rearrangement, the Live Preview refreshes based on the newly indicated order.

**Reports.** For all reports, the Query field containers in the Query pane include Sum, By, and Across.

- Use the Sum field container to aggregate or display numeric measure fields. Its context menu provides options to Sum (default), Print, Count, or List the fields in the report.

- Use the By Query field container to vertically sort dimension fields to produce row labels in the report output. Dimension fields are normally non-numeric or date fields.

- Use the Across Query field container to horizontally sort dimension fields to produce column labels in the report output.
Using Field Containers

Field containers are used to hold fields that you select based on the function that you want it to perform. For example, in chart and visualization mode, you can add a field to the Color field container, which will color your data based on the selected field.

For reports, the available field containers are different than those presented for charts and visualizations. This section reviews all of the field containers, providing you with a reference point when working with field containers.

Field Containers for Reports

The following field containers display when creating reports.

**Across**

Enables you to display column headings across the top of the report for the measure or dimension that is placed in this field container.

**By**

Enables you to specify sort fields for your report.

**Note:** You can rearrange the display order of your By sorts by dragging them into the desired order in the Query pane.

**Sum**

Displays numeric totals for numeric (measure) fields that are added to this field container.

Field Containers for Charts and Visualizations

The following field containers display when creating charts and visualizations.

**Animate**

Enables you to animate time progression using a slider control. As you move the control along the slider bar, an animation effect results. The slider control has a Play button that allows you to play and pause the animation. When you click Play, the Pause option is activated, enabling you to pause the progression and analyze your data. Slider controls are limited to one sort field and should be time or sequence related, such as month or year. This field container displays for many different chart types.
**By**

Use this field container to differentiate data types in a field that contains multiple categorical values. For example, when creating a gauge chart, the field that you specify in this field container becomes a By field, by which all values are displayed as a separate chart.

**Category**

Enables you to display data categorically in a chart. This field container displays for Tag Cloud charts, which are available in the Other charts category.

**Category Axis**

Use this field container to specify a field that contains categorical data. These categories display on the categorical portion of a 3D bar chart. The other axis, Series Axis, is plotted against the categorical data.

**Close**

Enables you to specify a numeric field to indicate the closing value of a stock. Other required values include: Open, High, and Low. This field container displays for Stock charts, which are available in the Other charts category.

**Color**

Enables the application of different colors based on the underlying data set for the field in this field container. When you place a numeric field in the Color field container, the legend displays as a heat scale. When you place an alphanumeric or a date field (non-measure) in the Color field container, the legend displays as colored markers. To change how the legend displays, right-click the Color field container and click **Color BY**.

**Columns**

Enables you to specify a field to display column data in a matrix chart in a visual. The use of measure fields is supported. Column data is displayed at the top of the visual, along the X axis. This field container is available for charts and visualizations.

**Detail**

Use this field container to add detail to your visual by adding a data field to it. For example, if you add Sale,Quarter to the Detail field container in your Scatter plot, the points on the plot are quadrupled, one for each quarter. In addition, the field that you specify in the Detail field container also displays on the hover menu for each point in the plot.

**Geolocation**

Enables you to specify a Geolocation field for use in a map.
Note: Geolocation fields are listed in the Data pane with a Geolocation icon 🗺.

**Grouping**

Enables you to specify a field by which to present your data in categories or groups. For example, this data field controls how a treemap is grouped.

**High**

Enables you to specify a numeric field to indicate the high value of a stock. Other required values include: Open, Low, and Close. This field container displays for Stock charts, which are available in the Other charts category.

**Horizontal Axis**

Displays the data for the selected along the X axis. This field container is available for charts and visualizations.

Note: You can specify up to three fields on the horizontal axis.

**Legend (Series)**

Enables you to add a field to specify for the legend of the chart. This field container displays for a number of charts that are available in the Other chart category.

**Low**

Enables you to specify a numeric field to indicate the low value of a stock. Other required values include: Open, High, and Close. This field container displays for Stock charts, which are available in the Other charts category.

**Lower Limit**

Enables you to specify a numeric (measure) field by which to establish a lower limit. This field container displays for Vertical Box Plot charts, which are available in the Other chart category.

**Lower quartile**

Enables you to specify a numeric (measure) field by which to establish a lower quartile. This field container displays for Vertical Box Plot charts, which are available in the Other chart category.
Measure

Use this field container to specify a measure that will serve as the basis for a pie chart. The Measure metric is used with the Color field container for pie charts to create sections based on your field selections. It is also used with Gauge charts.

Measure (Sum)

Enables you to specify a numeric (measure field) by which to sum data. This field container displays for a number of charts that are available in the Other chart category.

Median

Enables you to specify a numeric (measure) field by which to establish an median. This field container displays for Vertical Box Plot charts, which are available in the Other chart category.

Multi-graph

Enables the creation of multiple graphs based on the field that you place in this field container. This field container displays for many different chart types, including Spectral Heatmaps, which are available from the Other dialog box.

Open

Enables you to specify a numeric field to indicate the opening value of a stock. Other required values include: High, Low, and Close. This field container displays for Stock charts, which are available in the Other charts category.

Rows

Enables you to specify a field to display row data in a matrix chart in a visual. The use of measure fields is supported. Row data is displayed on the left side of the visual, along the Y axis. This field container is available for charts and visualizations.

Series Axis

Use this field container to specify a series to plot against the data presented on the Categorical Axis. This field container displays for 3D bar charts.

Size

Controls the size of markers or other data points.

Size (Sum)

Enables you to specify a numeric (measure) field, which will control the size of the data presented in a chart. This field container displays for Tag Cloud charts, which are available in the Other charts category.
Slices

Enables you to specify a field whose data values will dictate the size of the slices in a chart. This field container is available for Funnel charts, which are available in the Other chart category.

Tooltip

When you place a field in this field container, InfoAssist+ enables you to view additional information in the tooltip for a chart or visual.

Upper limit

Enables you to specify a numeric (measure) field by which to establish an upper limit. This field container displays for Vertical Box Plot charts, which are available in the Other chart category.

Upper quartile

Enables you to specify a numeric (measure) field by which to establish an upper quartile. This field container displays for Vertical Box Plot charts, which are available in the Other chart category.

Vertical Axis

Displays the data for the selected field along the Y axis. This field container is available for charts and visualizations.

X Axis

Enables the specification of a field on the X Axis of certain chart types. For example, XY Polar. This field container displays for a number of charts that are available in the Other chart category.

Y1 Measure (Sum)

Enables you to specify a measure (numeric) field for the Y Axis in a Pareto and certain line charts, which can be accessed from the Other chart category.

Y2 Measure

Use this field container to indicate a measure to serve as the basis for second Y axis. This field is used in various line charts, which can be accessed from the Other chart category.

Using Shortcut Menu Options in the Query Pane

In the Query pane, you can right-click any field and select from a list of available options that are displayed in the menu that appears. The options that you can select vary, depending on the type of Query field container in which the field is located and the type of report that you are creating.
You can also rename the content type in the Query pane. You can right-click the component and click Rename to change the title.

This allows you to customize the title in the Query pane. In addition, when working in Excel format, the name that you provide is used as the worksheet name in the workbook that is generated at run-time.

**Note:** If you are working with a report or chart in HTML format, you can also access Sum, Print, List, and Count aggregations from the shortcut menu on the report or chart component.

- Right-Click Field Options in the Query and Filter Panes on page 86

**Reference:** Right-Click Field Options in the Query and Filter Panes

The following table lists and describes all the right-click field options available in the Query and Filter panes for a selected field.

<table>
<thead>
<tr>
<th>Option</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td># of Columns</td>
<td>Opens the Number of Columns dialog box, where you can indicate the number of columns in which you wish to display multiple graphs.</td>
</tr>
<tr>
<td>Aggregation Functions</td>
<td>Provides a menu for selecting options to assign an aggregation type value to a selected numeric field in a report.</td>
</tr>
<tr>
<td>Break</td>
<td>Provides a menu of options to enable page breaks and subtotals, and resetting page numbers.</td>
</tr>
<tr>
<td>Create Group</td>
<td>Allows you to create a group of elements based on the field data type that you select. Once you define a new group, a higher-level field is created that contains the selected elements.</td>
</tr>
<tr>
<td></td>
<td>For more information, see How to Create a Dynamic Group on page 89.</td>
</tr>
<tr>
<td>Option</td>
<td>Description</td>
</tr>
<tr>
<td>--------------</td>
<td>--------------------------------------------------------------------------------------------------------------------------------------------</td>
</tr>
<tr>
<td>Change Title</td>
<td>Opens the Edit Title dialog box, where you can change the title of the selected field by typing the new title in the Enter Title field.</td>
</tr>
<tr>
<td>Note: When changing the title of a column heading, you can place a comma between words in the Enter Title field to create a multi-line header.</td>
<td></td>
</tr>
<tr>
<td>Data Bars</td>
<td>Provides a menu for enabling the data bar representation functionality. Selecting On adds a data visualization column to the right of a selected numeric field. The column displays values in each row using horizontal bars that extend from left to right in varying lengths, depending on the corresponding data values.</td>
</tr>
<tr>
<td>Delete</td>
<td>Deletes the selected field.</td>
</tr>
<tr>
<td>Note: In the Query and Filter panes, you can select and delete multiple data fields at one time. Using the CTRL key, select two or more data fields, right-mouse click, and then click Delete.</td>
<td></td>
</tr>
<tr>
<td>Drill Down</td>
<td>Opens the Drill Down dialog box, where you can create multiple drilldown links on a data field to external procedures or websites.</td>
</tr>
<tr>
<td>Edit Format</td>
<td>Opens the Field Format Options dialog box, where you can edit the field type and display options.</td>
</tr>
<tr>
<td>Filter Values</td>
<td>Opens the Filter dialog box for creating WHERE statements, which enable you to select only the data that you want and to exclude all unwanted data.</td>
</tr>
<tr>
<td>Missing</td>
<td>Allows you to show or hide fields with no value.</td>
</tr>
</tbody>
</table>

1. WebFOCUS Business User Edition
<table>
<thead>
<tr>
<th><strong>Option</strong></th>
<th><strong>Description</strong></th>
</tr>
</thead>
<tbody>
<tr>
<td>Sort</td>
<td>Provides access to the Sort, Rank, and Limit menus. The Sort menu allows you to sort your data either in ascending or descending order. The Limit menu allows you to specify the number of unique values displayed for a sort group that has been added. The Rank menu allows you to insert a rank column immediately to the left if a Sort By field is selected and adds a rank column to the left of the Sort By field if a Measure field is selected. Ranking a Measure field results in two copies of the field, the original Measure field and the Sort By field that is created during ranking.</td>
</tr>
<tr>
<td>Sub Footer</td>
<td>Opens the Sub Header &amp; Sub Footer dialog box where you can edit and style your footers.</td>
</tr>
<tr>
<td>Sub Header</td>
<td>Opens the Sub Header &amp; Sub Footer dialog box where you can edit and style your headers.</td>
</tr>
<tr>
<td>Traffic Light Conditions</td>
<td>Opens the Traffic Light Condition dialog box, where you can add new conditional styling or modify existing conditional styling by applying traffic light (and other) colors to a selected field in the report output when the field meets specified criteria.</td>
</tr>
<tr>
<td>Visibility</td>
<td>Provides a menu for controlling the visibility of the selected field. Clicking <em>Hide</em> removes the selected field from the report output. Clicking <em>Show</em> (default) displays the selected field in the report output.</td>
</tr>
</tbody>
</table>

All of the shortcut menu options that are available in the Query and Filter panes are also available in the Field tab. For more information, see *Field Tab* on page 70.

**Dynamic Grouping**

Dynamic grouping allows you to create groups of elements based on the field data type that you select. For example, in the *wf_retail_lite* database, there are a number of brands of televisions. Using the dynamic grouping functionality, you can create groups based on the popularity of a particular brand. The first group might include top sellers such as LG and Sony. The second group might contain the remaining brands (Panasonic, GPX, Supersonic, Tivax, and Audiovox). This would allow you to group top sellers into one group, and the remaining brands into another group.
**Note:** The Create Group option is only available for dimension fields of non-numeric format or attribute.

You can also specify multiple, unique groupings in the same session. For example, you might want to group the data to indicate groups or products, or specific regions.

**Note:** If you want to exclude a specific data element from your analysis, you can use the filter functionality.

The grouping that you specify is applied and this new group then replaces the original field that you selected in the Query pane. The name that you specify when creating the group is reflected in the Query pane.

**Note:** You can edit the group once it has been created by right-clicking on the higher-level field and clicking *Edit Group*.

---

**Procedure: How to Create a Dynamic Group**

1. From the Data pane, add one or more data fields to your report or chart.

   **Note:** You can use the dynamic grouping functionality on non-numeric dimension fields only.

2. In the Query pane, right-click the data field for which you want to apply dynamic grouping.

   **Note:** The Create Group option is also available in the Data pane shortcut menu.

3. Click *Create Group*.

   The Create a Group dialog box displays.

4. In the Field text box, optionally type a name for the new group.
5. Select the data values that you want to group. Use CTRL + click to select more than one value, as shown in the following image.

6. Click Group.

**Note:** To ungroup values, click a group and then click *Ungroup.*
7. Optionally, create additional groups, as shown in the following image.

8. Click OK.
Navigating the Environment

Your grouped data will display in the Data pane when your report, chart, or visualization refreshes, as shown in the following image.
