Customizing Content

After you create your content, you can use the WebFOCUS Business User Edition's vast array of features and styling options to customize your content.

In this chapter:

- ☐ Customizing Reports
 - ☐ Customizing Charts and Visualizations
 - ☐ Using Storyboards
 - ☐ Animating Visualizations
 - ☐ Using Filters to Customize the Display of Data
 - ☐ Using Auto Drill
 - ☐ Using the Auto Linking Feature to Link Content
 - ☐ Using Multi Drill
 - ☐ Adding Parameters for Data Selection at Run Time
 - ☐ Working With Slicers
 - ☐ Changing a Field Format
 - ☐ Dynamic Grouping
 - ☐ Customizing Domain Pages
-

Customizing Reports

You can customize reports using the various options on the Layout tab and Field tab.

- ☐ **Cell Padding.** Opens the Cell Padding dialog box, where you can set specific values to control the amount of space inserted between rows and columns in a report. For more information, see [How to Use Cell Padding in a Report](#) on page 19.
- ☐ **AutoFit.** Limits the width of columns in a report to be no wider than the largest value in each column. When additional fields are added, the report automatically grows at design time. AutoFit Column is selected, by default.
- ☐ **Page Break.** Starts a new page when the primary sort field changes. Clicking the drop-down icon enables you to select *Reset Page Numbers*, which allows you to reset page numbers on a page break to start at 1.
- ☐ **Line Break.** Inserts a line in the report output when the primary sort field changes.
- ☐ **Sub Header.** Opens a dialog box where you can type text to add a subheading just below the column titles in the report output when the primary sort field changes.

- ☐ **Sub Footer.** Opens a dialog box where you can type text to add a subfooting at the end of the data on each page of the report output when the primary sort field changes.
- ☐ **Subtotal.** Inserts a line, total text (TOTAL FIELD Value), and subtotals for all numeric fields when the primary sort field changes.

The drop-down menu on the *Field* tab, in the *Format* group provides three field-type options for the selected column, which are Alphanumeric, Integer, and Decimal. Selecting the fourth option, More options, opens the Field Format Options dialog box, which provides further formatting options for the selected field. For more information, see [Changing a Field Format](#) on page 127.

You can also apply floating and non-floating currency, percent signs, and commas. You can increase and decrease decimal places by clicking the appropriate buttons under the drop-down menu.

The Currency button is a split button that turns the currency symbol on or off. Click the *Currency* button to turn on the default floating currency option. Click the *Currency* button a second time to turn off the floating currency option.

To turn on the non-floating currency option, open the drop-down menu and select *Non floating currency*. To turn off the non-floating currency option, click the *Currency* button.

The following options on the Field tab, in the Display group:

- ☐ **Hide Field.** Allows you to hide a selected field.
- ☐ **Hide Missing.** Allows you to hide fields that have no value.
- ☐ **Aggregation.** Opens a drop-down menu of the following options:
 - ☐ None (default)
 - ☐ Sum
 - ☐ Average
 - ☐ Count
 - ☐ Count Distinct
 - ☐ Percent of Count
 - ☐ Distinct Values
 - ☐ First Value
 - ☐ Last Value

- ☐ Maximum
- ☐ Minimum
- ☐ Total
- ☐ Percent
- ☐ Row Percent
- ☐ Median
- ☐ Average Square

Sum is the default aggregation type value for all numeric fields added to the Measure Query field container in the Query pane. Changing the Measure Query field container from Sum to Print, Count, or List overrides all assigned aggregation type values. For more information related to charts, see [How to Display Aggregations on Measure Data](#) on page 38.

- ☐ **Traffic Lights.** Opens the Traffic Light Condition dialog box. From this dialog box you can do the following:
 - ☐ add new conditional styling by applying traffic light (and other) colors to a selected field in the output when the field meets specified criteria
 - ☐ modify existing conditional styling
 - ☐ enable conditional drill-down

For more information related to reports, see [Styling Reports](#) on page 10. For more information related to charts, see [Traffic Light Condition Dialog Box](#) on page 29.

- ☐ **Data Bars.** (Reports only.) Adds a data visualization column to the right of a selected numeric field. The column displays values in each row using horizontal bars that extend from left to right in varying lengths, depending on the corresponding data values.
- ☐ **Within.** Allows you to use specific aggregation tasks at different report levels. You can use the Within phrase to manipulate display field values as they are aggregated within a sort group rather than a report column.
- ☐ **Column(s).** Allows you to indicate the number of columns in which you wish to display multiple graphs. The value can be between 1 and 512. The default is 1. This option is also available from the Query pane shortcut menu for a Multi-graph component.

Styling Reports

You can apply custom styling to specific areas of a report. When creating a report, you can perform the following styling customization.

- ☐ Global styling for the entire report.
- ☐ Style data and column titles.
- ☐ Style headings and footings. For more information, see [How to Style Headings and Footings in a Report](#) on page 14.
- ☐ Style the rows of data with alternating colors. For more information, see [How to Style Rows of Data With Alternating Colors in a Report](#) on page 15.
- ☐ Apply traffic light conditional styling to data. For more information, see [How to Apply Traffic Light Conditional Styling to a Report \(By Constant\)](#) on page 16 and [How to Apply Traffic Light Conditional Styling to a Report \(By Field\)](#) on page 17.
- ☐ Increase or decrease the amount of space inserted between rows and columns. For more information, see [How to Use Cell Padding in a Report](#) on page 19.

Procedure: How to Apply Styling to an Entire Report

1. Create a report, or open an existing report.
2. On the *Home* tab, in the *Report* group, click *Style*.
The Report Style dialog box opens.
3. Select any of the following styling options that are available in the Style group.
 - ☐ **Font.** Opens a drop-down list, which you can use to change the font.
 - ☐ **Font size.** Opens a drop-down list, which you can use to change the font size value.
 - ☐ **Bold.** Applies bold font formatting to the selected text.
 - ☐ **Italic.** Applies italic font formatting to the selected text
 - ☐ **Underline.** Underlines the selected text.
 - ☐ **Justify Left.** Aligns the text to the left of the canvas.
 - ☐ **Justify Center.** Aligns the text to the center of the canvas.
 - ☐ **Justify Right.** Aligns the text to the right of the canvas.
 - ☐ **Font color.** Opens the Color dialog box, where you can select the font color.

- ☐ **Background color.** Opens the Color dialog box, where you can select the background color for the report.

Note: If you have chosen to specify a color, you must click OK to return to the Report Style dialog box.

- ☐ **Currency Symbol.** Opens a drop-down menu, from which you can choose a currency symbol. Options are US dollar, British Pound, Japanese Yen, Euro, New Israeli Shekel.
- ☐ **Reset to Quick Styles from Template.** Resets all settings to the default settings from the template.

Note: Reset only works while the Report Style dialog box is open. Once you click OK, all changes are committed. To undo global styling after it has been committed, you must use the Undo command on the Quick Access Toolbar.

Preview. Displays the text as you have formatted it.

4. Click OK. The report is styled accordingly.

***Procedure:* How to Perform Field-Level Styling in a Report**

You can style data, column titles, or both, in the report output for the selected data source field.

1. Create a report.
2. In the Query pane, select a data source field.

The Field tab appears on the ribbon.

3. In the Style group, click one of the following:

- ☐ **Data Style.** Styles only the data for the selected data source field.
- ☐ **Title Style.** Styles only the column title for the selected data source field.
- ☐ **Data + Title.** Styles both the data and the column title for the selected data source field.

4. Select any of the following styling options that are available in the Style group.

- ☐ **Font.** Opens a drop-down list, which you can use to change the font.
- ☐ **Font size.** Opens a drop-down list, which you can use to change the font size value.
- ☐ **Font color.** Opens the Color dialog box, where you can select the font color.
- ☐ **Reset to Quick Styles from Template.** Resets all settings to the default settings from the template.

Note: Reset only works while the Report Style dialog box is open. Once you click *OK*, all changes are committed. To undo global styling after it has been committed, you must use the Undo command on the Quick Access Toolbar.

- ☐ **Bold.** Applies bold font formatting to the selected text.
- ☐ **Italic.** Applies italic font formatting to the selected text
- ☐ **Underline.** Underlines the selected text.
- ☐ **Justify Left.** Aligns the text to the left of the canvas.
- ☐ **Justify Center.** Aligns the text to the center of the canvas.
- ☐ **Justify Right.** Aligns the text to the right of the canvas.
- ☐ **Background color.** Click the button to open the Color dialog box, where you can select the background color for the report.

Note: When working with font or background colors, you must click *OK* on the Color dialog box to return to the Report Style dialog box.

5. Click *OK*. The report is styled accordingly.

***Procedure:* How to Add Headings and Footings to a Report**

You can make a report more meaningful by adding headings and footings. Headings and footings supply context and key information about a report, such as its purpose and audience. Headings and footings also provide structure, helping you navigate to the detail sought. They enhance visual appeal.

In this procedure, you will add and style a report heading and page heading. The procedure uses sample values, but you can supply values that apply to your own, reports.

Headings and Footings are available in Query Design view, Live Preview, and Document view.

1. Create a report.
2. On the *Home* tab, in the *Report* group, click the *Header & Footer* button.

The Header & Footer dialog box opens.

3. Click the tab for the heading or footing element that you want to add.

For a report, you can add a report heading, page heading, page footing, or report footing. By default, the Report Header tab is selected. In this procedure, accept the default.

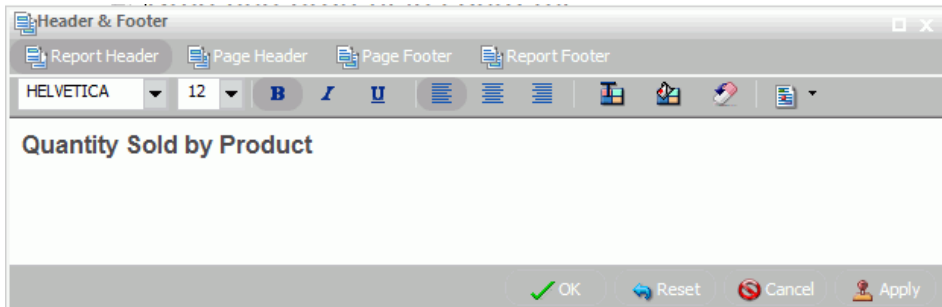

4. Click inside the design area of the dialog box, and type the text for the heading.

For example, the text for a sample report heading might be Quantity Sold by Product.

5. Using the styling ribbon, apply styling to the report heading text.

For example, click *HELVETICA* from the Font drop-down list. From the Font size drop-down list, click *12*.

The sample report heading with the selected styling values is shown in the following image.

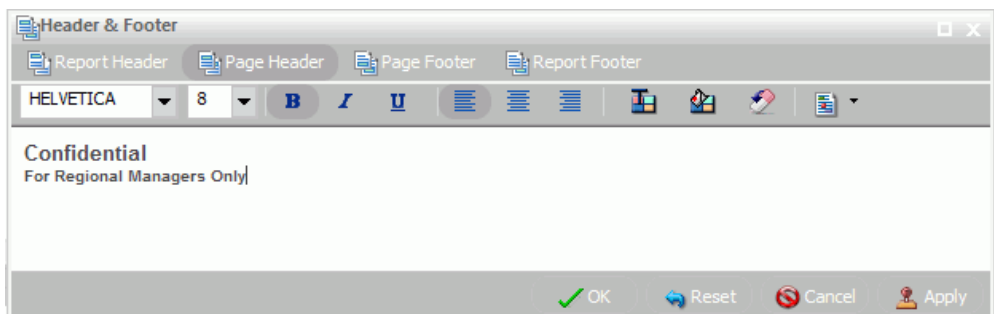

6. Click *Apply* to save the changes you have made so far, without closing the dialog box.

7. To add a page heading, click the *Page Header* tab.

In this procedure, you are going to add one of the supplied quick text options.

8. Click the last icon  (*Insert preformatted text content for headers/footers*) on the right of the styling ribbon, and click *Confidential* in the list.
9. Change the font and font size. For example, change the font to *HELVETICA* and the size to *10*.

You can add your own text before or after the supplied text, for example, For Regional Managers Only.

10. Click *OK* to save the report heading and page heading and close the Header & Footer dialog box.

The report heading and page heading that you added and styled are shown in Live Preview in the following image.

Quantity Sold by Product	
Confidential For Regional Managers Only	
Product Category	Quantity Sold
Accessories	511,667
Camcorder	455,244
Computers	351,777
Media Player	771,934
Stereo Systems	1,114,332
Televisions	105,188
Video Production	199,749

11. To make changes, to either the report, or page heading, right-click the heading and click *Edit*. You can also double-click on the header to open the Header & Footer dialog box.

***Procedure:* How to Style Headings and Footings in a Report**

You can style headings and footings in the report output for the selected heading or footing field.

1. Create a report.
2. With the report opened in Live Preview, select the heading or footing text that you want to style.
3. On the *Home* tab, in the *Report* group, click *Header & Footer*.

The Header & Footer dialog box opens.

4. Select any of the following styling options that are available in the Style dialog box.

- ☐ **Font.** Opens a drop-down list, which you can use to change the font.
- ☐ **Font size.** Opens a drop-down list, which you can use to change the font size value.
- ☐ **Bold.** Applies bold font formatting to the selected text.

- ☐ **Italic.** Applies italic font formatting to the selected text
- ☐ **Underline.** Underlines the selected text.
- ☐ **Justify Left.** Aligns the text to the left of the canvas.
- ☐ **Justify Center.** Aligns the text to the center of the canvas.
- ☐ **Justify Right.** Aligns the text to the right of the canvas.
- ☐ **Font color.** Opens the Color dialog box, where you can select the font color.
- ☐ **Background color.** Opens the Color dialog box, where you can select the background color for the report.
- ☐ **Reset to Quick Styles from Template.** Resets all settings to the default settings from the template.

Note: Reset only works while the Report Style dialog box is open. Once you click *OK*, all changes are committed. To undo global styling after it has been committed, you must use the Undo command on the Quick Access Toolbar.

5. Click *OK*. The report is styled accordingly.

***Procedure:* How to Style Rows of Data With Alternating Colors in a Report**

You can style rows of data in a report with alternating colors.

1. Create a report.
2. Open the report in Live Preview.
3. On the *Home* tab, in the *Report* group, click *Banded*.

The Color dialog box opens.

4. Select a color.
5. Click *OK*.

The selected color provides an alternating color scheme for the report. The report output displays alternating rows of data, using a white background for one row and a background of the selected color for the next row. This pattern continues throughout the report, as shown in the following image of Banded report output.

Product Category	Quantity Sold
Accessories	511,667
Camcorder	455,244
Computers	351,777
Media Player	771,934
Stereo Systems	1,114,332
Televisions	105,188
Video Production	199,749

Procedure: How to Apply Traffic Light Conditional Styling to a Report (By Constant)

You can apply traffic light conditional styling to data for a selected measure field. By default the report displays the values that satisfy the first condition in green, and the values that satisfy the second condition in red.

1. Open a report in Live Preview.
2. Open the Traffic Light Condition dialog box in one of the following ways:
 - ☐ **Ribbon:** Select a field on the report, and then on the *Field* tab, in the *Display* group, click *Traffic Lights*.
 - ☐ **Shortcut Menu:** Right-click a field on the report, point to *More*, and then click *Traffic Light Conditions*.

The Traffic Light Condition dialog box opens.

3. From the Relational Operators drop-down menu below the field name, click a relational operator. For example, Equal to.
4. In the field to the right of the Relational Operators drop-down menu, click the down arrow for the Type drop-down menu.

The Type menu opens.

5. In the Type drop-down list, click *Constant*.
6. Enter a value in the Value field.

or

- a. From the Get Values drop-down menu, select one of the following values: All, First, Last, Minimum, Maximum, or From File. The value that you select appears in the Get Values field.
- b. Select the value in the Get Values field. The value that you selected appears in the Value field.

7. Click *OK*.

The value that you selected appears in the field to the right of the Relational Operators drop-down menu.

8. Click the *Style* button.

The *Style* menu opens.

9. From the *Style* menu, click the *Font Color* or *Background Color* button.

The *Color* dialog box opens.

10. Select a color.

11. Click *OK*.

The color appears in the *Preview* box.

12. Click *Apply* to apply the colors to the report.

13. Click the *Drill Down* button.

The *Drill Down* dialog box opens.

14. In the *Drill Down* dialog box, use the radio buttons to specify the action you wish to perform. For example, drill down to a report or webpage, create an auto link target, or refresh a BI portal.

15. Click *OK* to close the dialog box.

16. In the *Traffic Light Condition* window, click the *New* button to set traffic light conditions for additional fields.

***Procedure:* How to Apply Traffic Light Conditional Styling to a Report (By Field)**

You can apply traffic light conditional styling to data for a selected measure field. By default the report displays the values that satisfy the first condition in green, and the values that satisfy the second condition in red.

1. Open a report in *Live Preview*.

2. Open the Traffic Light Condition dialog box in one of the following ways:

- ☐ **Ribbon:** Select a field on the report, and then on the *Field* tab, in the *Display* group, click *Traffic Lights*.
- ☐ **Shortcut Menu:** Right-click a field on the report, point to *More*, and then click *Traffic Light Conditions*.

The Traffic Light Condition dialog box opens.

3. From the drop-down menu below the field name, select a relational operator. For example, Equal to.
4. In the field to the right of the Relational Operators drop-down menu, click the arrow for the Type drop-down menu.

The Type dialog box opens.

5. In the Type drop-down list, select *Field*.

The Type dialog box displays a list of the data fields that you can choose from.

6. Select a data field from the list.
7. Click *OK*.

The field that you selected appears in the field to the right of the Relational Operators drop-down menu.

8. Click the *Style* button.

The Style menu opens.

9. From the Style menu, click the *Color* button.

The Color dialog box opens.

10. Select a color.

The color appears in the Preview box.

11. Click *OK*.

12. Click the *Drill Down* button.

The Drill Down dialog opens.

13. In the Drill Down dialog, specify each of the following:

- ☐ Drill down to a report or a webpage
- ☐ URL of the webpage
- ☐ An alternate comment

- ☐ Target (New Window, Same Window)
- ☐ Parameters that you want to use (Name, Value)

14. Click *OK*.

15. Click the *New* button to set traffic light conditions for additional fields.

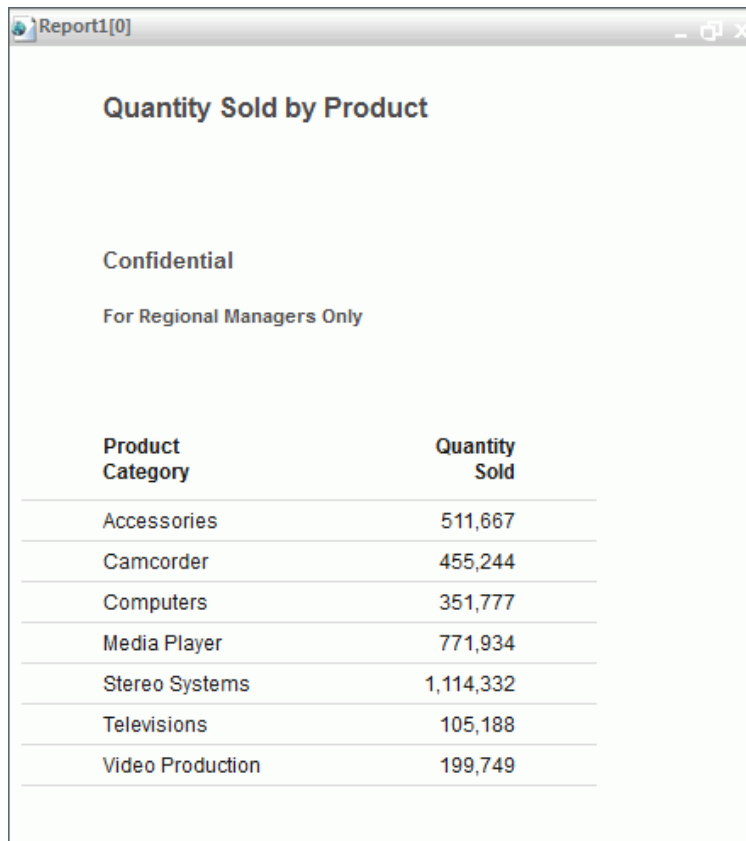

Procedure: **How to Use Cell Padding in a Report**

You can customize the amount of space inserted between rows and columns in a report.

1. Open a report in Live Preview.
2. On the *Layout* tab, in the *Report* group, click *Cell Padding*, and then click *Custom*.
The Cell Padding dialog box opens.
3. Type the cell padding values that you want in the Top, Bottom, Left, and Right fields.
4. Click *OK*.

The report reflects the cell padding that you set.

The following image shows a report with custom cell padding.

The screenshot shows a report window titled "Report1[0]". The report content includes a title "Quantity Sold by Product", a confidentiality notice "Confidential For Regional Managers Only", and a table with two columns: "Product Category" and "Quantity Sold". The table lists seven product categories with their respective quantities sold.

Product Category	Quantity Sold
Accessories	511,667
Camcorder	455,244
Computers	351,777
Media Player	771,934
Stereo Systems	1,114,332
Televisions	105,188
Video Production	199,749

Report Style Dialog Box

The Report Style dialog box provides options to style your report, as described below.

- ☐ **Font.** Use the drop-down menu to change the font.
- ☐ **Font size.** Use the drop-down menu to change the numeric value for the font size.
- ☐ **Font style.** Click the appropriate button (bold, italic, underline) to style the selected text.
- ☐ **Text alignment.** Click the appropriate button (left, center, right) to align the selected text.
- ☐ **Font color.** Click the button to open the Color dialog box, where you can select the font color. For more information, see [Color Dialog Box](#) on page 21.

☐ **Background.** Click the button to open the Color dialog box, where you can select the background color for the report.

☐ **Currency Symbol.** Click the button to access the following currency symbols US Dollar, British Pound, Japanese Yen, Euro, New Israeli Shekel.

Note: The New Israeli Shekel currency symbol can be displayed with the following settings only:

☐ Server codepage = 1255, 65001, 424, or 65002.

☐ Client codepage = 1255 or 65001.

☐ Application server encoding = Cp1255 or UTF8.

☐ Font name = Lucida Sans Unicode or Arial Unicode MS.

☐ **Reset to Quick Styles from Template.** Click the button to reset all settings to the default settings from the template.

Note: Reset only works while the Report Style dialog box is open. Once you click OK, all changes are committed. To undo global styling after it has been committed, you must use the Undo command on the Quick Access Toolbar.

Color Dialog Box

The Color dialog box provides options for working with color in your report.

The Color dialog box options are:

☐ **Standard Color Swatches.** Provides a set of 48 predefined colors from which to choose on the left side of the dialog box. Your selection appears in the Selected Color field.

☐ **Custom Color Palette.** Provides a palette on the right side of the dialog box to define a custom color. Your selection appears in the Selected Color field.

☐ **Luminosity bar.** Drag the slider to change the luminosity (relative lightness or darkness) of a color. The corresponding numerical value appears in Lum.

☐ **Hue.** Indicates the hue value of your selected color. You can enter a value, or increase or decrease the hue value by using the up and down arrows, respectively.

☐ **Sat.** Indicates the saturation value of your selected color. You can enter a value, or increase or decrease the saturation value by using the up and down arrows, respectively.

- ☐ **Lum.** Indicates the luminosity (lightness or darkness) of your selected color. You can enter a value, or increase or decrease the luminosity value by using the up and down arrows, respectively.
- ☐ **Red.** Represents the numeric value of red (0 to 255).
- ☐ **Green.** Represents the numeric value of green (0 to 255).
- ☐ **Blue.** Represents the numeric value of blue (0 to 255).
- ☐ **Selected Color.** Displays the color that you selected.
- ☐ **Transparent.** Makes the color transparent. This is only available for background colors.

Report Group

The Report group on the Home tab contains commands to enhance a report.

- ☐ **Theme.** Opens a dialog box where you can select a theme to style your report. You can use the default style sheet by clicking the *Use Default Stylesheet* button.

You can also select a document styling theme or an application theme to style all reports created. Use the Environment and Styling section of the Options window, which is accessible by clicking *Options* in the Application main menu.

Note: If you switch themes when working in Report mode, all custom styling is removed from the procedure.

- ☐ **Style.** Opens a Report Style dialog box for applying global styling to the entire report. For more information about the Report Style dialog box, see [Report Style Dialog Box](#) on page 20. For more information about styling reports, see [Styling Reports](#) on page 10.
- ☐ **Banded.** Opens a Color dialog box for choosing a color that provides an alternating color scheme for the report. The report output displays alternating rows of data, using a white background for one row and a background of the selected color for the next row. This pattern continues throughout the report. For more information about the Color dialog box, see [Color Dialog Box](#) on page 21. For more information about banded styling, see [How to Style Rows of Data With Alternating Colors in a Report](#) on page 15.
- ☐ **Header & Footer.** Opens the Header & Footer dialog box, from which you can add and style headings and footings.
 - ☐ For a report, you can add and style report headings, page headings, page footings, and report footings. In the dialog box, the tab for Report Header is active by default.

- ☐ For a chart, you can add and style page headings and page footings. Page Header is active by default.
- ☐ You can drag fields from the Data pane into the Header & Footer dialog box.

Another way to access the Header & Footer dialog box is to click the down arrow next to the Header & Footer button. It opens a drop-down menu from which you can select the heading or footing that you want to work with (Report Header, Page Header, Page Footer, Report Footer). After you make your selection, the Header & Footer dialog box opens, and the heading or footing that you selected is active.

From the Header & Footer dialog box, you can add and style the active heading or footing, or choose a different heading and footing to work with by selecting the applicable tab. You can switch among tabs, but InfoAssist+ does not save changes made on the tabs until you click Apply or OK. If you click Apply, the Header & Footer dialog box remains open. If you click OK, the dialog box closes.

You can style a selected heading or footing using the options on the styling toolbar. From left to right, you can customize the font type, font size, and font style (bold, italic, or underline). You can justify text (left, center, or right), select the font color and background color, and restore styling settings to their default value from the template.

You can also add page footings to your reports or charts. From the Header & Footer dialog box, select Page Footer. When working with reports, you may use the Additional alignment

options icon , to specify whether you want to align the footer relative to the data (default) or relative to the page. The Align Relative to Data option places the footer directly below the data, and the Align Relative to Page option positions the footer at the bottom of the page. When working with charts, only the default page footer alignment option is supported.

Note: The Align Relative to Page option works with reports that use positioned formats (for example, PDF, PS, DHTML, PPT, and PPTX).

You can also insert *quick text* into a heading or footing. Quick text is supplied for you. It includes information that is typically useful in identifying a report or chart. From the preformatted text drop-down menu, you can select:

- ☐ Draft
- ☐ Page X of Y
- ☐ Confidential
- ☐ Date (multiple formats)

- ☐ Time (multiple formats)
- ☐ Created by (followed by a name)

For charts, an icon  on the far right of the styling ribbon is enabled. This icon provides two options for controlling the way in which the page heading and page footing are rendered. The default option, Create Header and Footer as text, renders the heading and footing as text elements that are separate from the chart image. The option, Embed Header and Footer in the chart, renders the heading and footing text as part of the chart image.

Once you have added a heading or footing to a report or chart, you can double-click it on the canvas in design mode to reopen the Header & Footer dialog box. You can also right-click an existing heading or footing in design mode and click *Edit* from the menu to open the dialog box.

For more information on adding and styling headings and footings, see [How to Add Headings and Footings to a Report](#) on page 12.

- ☐ **Column Totals.** (Reports only) Adds a grand total row to the bottom of the report to sum numeric data in each column.
- ☐ **Row Totals.** (Reports only) Adds a grand total column to the right side of the report to sum numeric data in each row.

Report Features

The options on the Format tab, in the Features group, while in Report mode, allow you to add pop-up titles to columns, stack measures, and more.

- ☐ **Title Popup.** Displays pop-up titles when the mouse pointer hovers over a column title in the report output.
- ☐ **Accordion.** Creates expandable views of data for each vertical sort field. This option displays data values only for the first vertical sort field when you first view the output. You can manually expand your view to expose the data values of lower-level sort fields.

Note: You cannot use the Table of Contents with the Accordion feature.

- ☐ **Repeat Sort Value.** Displays all repeated sort values instead of blanks in the output after the first instance of a new sort value, which is the default behavior.
- ☐ **Stack Measures.** Displays all numeric measure field names in a column of the report output with the corresponding numeric data values.

- ☐ **active report options.** Opens the active report options dialog box where you can configure your active report options such as menu items, graph engine, and colors.

The following table lists the output for which each feature is available. Yes means the output is available for the feature. No means that the output is not available for the feature.

	HTML	HTML5	active report	PDF	Excel	PowerPoint
Title Popup	yes	no	no	no	no	no
Accordion	yes	no	yes	no	no	no
Repeat Sort Values	yes	yes	yes	yes	yes	yes
Stack Measures	yes	no	no	no	no	no
active report options	no	no	yes	no	no	no

Customizing Charts and Visualizations

Once you have created a visualization or chart, you can customize and style your content. For example, you can add axis titles or a header. The customization options vary depending on the type of chart or visual you are developing.

Chart Features

The options on the Format tab, in the Features group allow you to add effects and different functionality to your charts.

- ☐ **3D Effect.** Sets the three-dimensional view to on or off. The 3D Effect feature is disabled for 3D, stock, gauge, gauge thermometer, Pareto, spectral map, and funnel chart types. By default, 3D effect is off for all chart types.

Note: When working with charts in HTML5 format, the 3D Effect option is not supported.

- ☐ **Rotate.** Toggles between a vertical display or horizontal display of a chart. For more information, see [How to Rotate a Chart](#) on page 93. The Rotate feature is disabled for pie, scatter, 3D, stock, gauge, gauge thermometer, Pareto, spectral map, and funnel chart types.

- ☐ **Reference.** Opens a drop-down menu that provides the Add Reference Line to Y-Axis and Add Reference Line to X-Axis options. Selecting one of these options opens the appropriate Reference Line dialog box, where you can set the specific X-axis or Y-axis value, type the text that you want, and position the reference line on a chart. For more information, see [How to Display a Static Reference Line](#) on page 93. The Reference feature is disabled for pie, 3D, stock, gauge, gauge thermometer, Pareto, spectral map, and funnel chart types.
- ☐ **Annotate.** Opens a drop-down menu that provides the Add an annotation option. Selecting this option opens the Annotation dialog box, where you can type the text that you want and position the annotation on a chart.
- ☐ **Grid.** Opens a drop-down menu allowing you to expand options for Horizontal or Vertical Gridlines. Both selections allow you to enable or disable Major and Minor Gridlines. Clicking *More Options* opens the Format Grid Lines dialog box. For more information, see [Formatting Gridlines](#) on page 53.
- ☐ **Frame & Background.** Opens the Frame & Background dialog box where you can edit the background style and frames for charts. The dialog contains different options depending on the chart type selected. For more information, see [Formatting a Frame and a Background](#) on page 72.
- ☐ **Narrative.** Adds narration to your chart. This option must be enabled by an administrator.
- ☐ **Gauges.** Opens the Gauge dialog box where you can edit your gauge chart. This button is only available when a gauge chart type is selected. For more information, see [How to Style a Gauge Needle](#) on page 89.
- ☐ **active report Options.** Opens the active report options dialog box where you can configure your active report options, such as menu items, graph engine, and colors. This button is available when the output type is set to active report.

Note: Annotate is not available in HTML5.

Labeling Charts

You can add labels to charts and visualizations using the Labels group on the Format tab.

- ☐ **Axes.** Opens a drop-down menu, where you can enable, stagger, and rotate horizontal and vertical axis labels. You can also edit the axis labels by clicking *More Horizontal Axis Options* or *More Vertical Axis Options*. For more information, see [Formatting Axis Labels](#) on page 63.

- ❑ **Legend.** Opens a drop-down menu, where you can select the *Show Legend* option to display the legend on the chart, or clear your selection to hide the legend, change the default legend position, and change the default legend orientation. For more information, see [Format Legend Dialog Box](#) on page 48.

Accessing Chart Formatting Tools

Your presentation of data on a chart or visualization is successful when it communicates to your audience the message that you intend. InfoAssist+ helps you meet the needs of your audience and convey your message by providing numerous chart features. For example, you can adjust the appearance of a chart, add layers of information, or customize the labels that identify the data on the chart.

Using Live Preview

In Live Preview, the canvas on the right of the window provides a preview of the content that you can interact with. The preview is context sensitive, meaning that depending on what portion you select different options become available.

In Live Preview, when you hover the mouse over a graph element (for example, legend, axis label, title), the bounding area is highlighted with a dotted line.

In Live Preview, when you select a graph element (for example, legend, axis label, title), the bounding area is highlighted with a solid line.

Once you select a chart element, you can access all available design options on the ribbon, or you can right-click an element to open a shortcut menu of frequently-used design options. Once you have selected your design option from the ribbon or the menu, InfoAssist+ instantly applies it to the chart element, so that you see the result immediately.

Shortcut menus are enabled for charts that are generated with either sample data, or live data from your data source.

The following sections describe the chart elements and the ribbon options that you can work with to design your charts in Live Preview.

Related Information:

- ❑ [Using Field Containers](#)

Formatting a Series

A series is a measure field that is included in a chart or visualization. You can format a series in a variety of ways. For example, you can change the color of a series, add a trendline to a series, or change the appearance of markers on a series.

You can access the full set of formatting options on the *Series* tab and *Field* tab. For more information, see *Series Tab* and *Field Tab*.

You can also access a subset of frequently-used options by right-clicking a series element on a chart to open a menu of those options.

Tip: The options that you see on the menu depend on the type of chart that you are creating. For example, the *Series Type* option would not appear on the menu for a pie chart, but it would appear for a bar, line, and area chart.

Associated Dialog Boxes

Whether you access series options from the ribbon or the shortcut menu, you are presented with a dialog box of options. The following dialog boxes are commonly used for formatting a series:

- ☐ **Format Series**
- ☐ **Edit Title**
- ☐ **Traffic Light Condition**

For Instructions on how to open these dialog boxes, see the procedures in [Using Series Properties](#) on page 33.

Format Series Dialog Box

The *Format Series* dialog box contains options to format the fill and border of each series on a chart. To access this dialog box, on the *Series* tab, in the *Style* group, click *Style*.

The *Format Series* dialog box contains the following tabs:

- ☐ **Fill**
- ☐ **Border**

Use the *Fill* tab to modify the color of a chart series.

The *Fill* tab contains the following options:

- ☐ **No fill.** Select this option to remove the color from the series.
- ☐ **Solid fill.** Select this option to display the *Color* and *Transparency* options.
 - ☐ **Color.** Click this icon to open the *Color* dialog box, where you can select a color for the series.
 - ☐ **Transparency.** Move the slider to make the bands opaque (0%) or transparent (100%). The default is 0%.

- ☐ **Gradient fill.** Select this option to display the direction of the gradient, the color pattern of the gradient, and the degrees of transparency for the two colors that make up the gradient. A gradient is a smooth color transition or blending of one color to another. The number of colors to use in a gradient is defined by the *stop* or *pin* elements.
- ☐ **Direction.** Select from this drop-down menu to set the direction of the gradient fill. For example, Gradient right or Gradient left.

Use the Border tab to specify a border for a chart series.

Note: When you create a bubble chart and attempt to apply a border using the Style options on the Series tab, the border does not display.

The Border tab contains the following options:

- ☐ **Show Border Color.** Select this option to show a border color around each series.
- ☐ **Border Color.** Click this icon to open the Color dialog box, where you can select a color for the border.

Edit Title Dialog Box

To edit the title of a series, right-click a series on the canvas, and click *Change Title*. The Enter Title dialog box contains a text field in which you can type the title for a series on a chart. Click *OK* and the title appears on the chart.

Traffic Light Condition Dialog Box

The Traffic Light Condition dialog box contains fields for adding new conditional styling or modifying existing conditional styling by applying a traffic light color to the selected field.

The Traffic Light Condition dialog box contains the following fields.

- ☐ **Relational Operators.** Select from this drop-down menu to set the relational operator. For example, Equal to.
- ☐ **Type/Value.** Click this unlabeled field to open a dialog box that contains the following fields:
 - ☐ **Type.** Opens a drop-down menu of the following values Constant and Field. Select *Constant* to enter a constant value. Select *Field* to open a visual display of the fields in your data source.
 - ☐ **Value:** Enables you to specify a value based on the Type that you select.

Note: If you are creating a Traffic Light condition on a full date field, the Value field will have a calendar icon adjacent to it. You can use this icon to select a date using a calendar control.

- ☐ **Get Values.** Select a value option from this drop-down list. For example, All or First.

The Traffic Light Condition dialog box contains the following buttons:

- ☐ **Selected Condition.** Click this icon to select a condition to work on.
- ☐ **New.** Creates a new rule.
- ☐ **Delete.** Deletes a rule.
- ☐ **Color.** Opens the Color dialog box.
- ☐ **Drill Down.** Opens the Drill Down dialog box, where you can drill down to a webpage or a URL. Specify the following:
 - ☐ URL of the webpage or location of the report
 - ☐ A description
 - ☐ Target (New Window, Same Window, a value that you enter)
 - ☐ Parameters that you want to use (Name, Value)

Series Elements Shortcut Menu

When you right-click a series, a menu of options opens. The menu contains options that are available on the Field and Series tabs.

The menu options are described in the following table. The table provides links to the sections of this document in which those options are also discussed.

Option	Description
Filter Values	Enables you to create or modify a WHERE statement, using the Filter dialog box. With a WHERE statement, you select only the data that you want to display, and exclude unwanted data. For information on filtering your data, see <i>Data Tab</i> and <i>Field Tab</i> .

Option	Description
Sort	Enables you to sort the series in either ascending or descending order.
Visibility	<p>Controls the display of the selected series (field) on a chart. The value Hide suppresses the display of the series, and the default value Show displays the series.</p> <p>For instructions, see How to Hide a Field in a Series on page 37.</p>
Change Title	Enables you to edit the title of the selected series. In the Edit Title dialog box, type the new title in the Enter Title field, and click OK.
Series Type	Changes the chart type of the selected series to bar, line, or area. The option None (default) returns the series to the chart type that was in effect before you changed it. This option applies to bar, line, and area chart types only.
Series Color	Enables you to specify the color of the selected series, using the Color dialog box. For more information, see Color Dialog Box on page 21.
More Style Options	Opens the Format Series dialog box. For more information, see Format Series Dialog Box on page 28.
Data Labels	<p>Controls the display of data labels (values) on the selected series. The default value Hide suppresses the display of labels, and the value Show displays labels.</p> <p>This option does not apply to the gauge chart type.</p> <p>For instructions, see How to Show and Hide Data Labels on page 47.</p>

Option	Description
Color Mode	<p>Controls how color is applied to a series (measure field) on a chart. The possible settings are By Series (default) and By Group. For example, assume that there is only one series on a sample bar chart. The By Series setting applies the same color to all the bars in the series. The By Group setting applies a different color to each bar.</p> <p>For instructions, see How to Control the Color Mode on page 41.</p>
Add Trendline	<p>Draws a line on a chart to indicate a statistical trend.</p> <p>This option does not apply to the pie, funnel, 3D, gauge, or stock chart type.</p> <p>For an example of a chart with a trendline, see How to Add a Trendline on page 34.</p>
Drill Down	<p>Opens the Drill Down dialog box, where you can configure a hyperlink or a drill-down procedure for the selected field. Clicking that field in the report output, at run-time, redirects you to the URL you specified or executes the indicated procedure.</p>
More	<p>Contains the Aggregation Functions, Traffic Light Conditions, and Missing options.</p> <p>Aggregation Functions assign an aggregation value to a numeric measure field in a report. For instructions, see How to Display Aggregations on Measure Data on page 38.</p> <p>Traffic Light Conditions enables you to specify the color of numeric measure fields in the output, depending on conditions that you set. You can use the Traffic Light Condition dialog box to specify the conditions and colors.</p> <p>For instructions, see How to Apply Traffic Light Conditions With Drill-Down to a Numeric Measure Field (By Constant) on page 38 and How to Apply Traffic Light Conditions With Drill-Down to a Numeric Measure Field (By Field) on page 39.</p> <p>The Missing option allows you to show or hide fields with no value.</p>

Option	Description
Delete	Removes the selected series from the report and updates the Live Preview accordingly.

Using Series Properties

The following sections contain procedures for customizing a series.

Procedure: How to Select a Series

1. Create a chart or visualization.
2. On the *Series* tab, in the *Select* group drop-down menu, select the Series that you want to customize.

The Series appears in the drop-down menu field.

Procedure: How to Format the Fill and Border of a Series

1. Create a chart or visualization.
2. Open the Format Series dialog box in one of the following ways:
 - ☐ **Ribbon:** On the *Series* tab, in the *Style* group, click *Style*.
 - ☐ **Shortcut Menu:** Right-click a series on the chart, and click *More Style Options*.

The Format Series dialog box opens.

3. Use the fill and border options to format the series.
For more information, see [Format Series Dialog Box](#) on page 28.
4. Click *OK* to close the dialog box.
The Format Series dialog box closes. The series fill and border are formatted accordingly.
5. Click *Run* to generate the report.

Enhancing Series Using the Series Tab

The Properties group contains commands for enhancing charts, such as changing the type or adding a trendline, for the selected series.

Procedure: How to Change the Type of a Series

1. Create a bar, line, or area chart.

2. Access the list of series types in one of the following ways:

❑ **Ribbon:** On the *Series* tab, in the *Properties* group, open the *Type* drop-down menu.

❑ **Shortcut Menu:** Right-click a series on the chart, and point to *Series Type*.

3. Select the type that you want the series to become.

The chart contains the new series type.

Procedure: How to Add a Trendline

A trendline is a line that is drawn over the plot area of a chart or visual to show the pattern of data points. The pattern reveals a statistical trend. In particular, the slope of the trendline, which is calculated by subtracting and dividing two different x, y coordinate values, is a value that indicates the rate at which the y value of a line rises or falls as the x value increases. Once the slope of your chart or visual is determined, you can further extrapolate your results and gain further insight into your data.

Note: The mathematical equation for the selected trendline option is only available in chart mode. It is not available in visualization mode.

1. Create a chart or visualization.

2. Access the menu of trendline types in one of the following ways:

❑ **Ribbon:** On the *Series* tab, in the *Properties* group, open the *Trendline* drop-down menu.

❑ **Shortcut Menu:** Right-click a series on the chart or visual, and point to *Add Trendline*.

3. Select the type of trendline that you want to display.

The trendline appears on the canvas.

4. Optionally, to display the mathematical equation for the selected trendline option, on the *Series* tab, in the *Properties* group, click *Equation*.

Formatting Charts Using the Series Tab

The *Series* tab contains options for formatting charts.

Procedure: How to Apply Smooth Line Effect to a Line Chart

1. Create a line chart.

2. Select a series on the line chart.

3. On the *Series* tab, in the *Line* group, click *Smooth Line*.

The Smooth Line effect is applied to the series.

Procedure: How to Hide a Series Line Between Markers

Lines appear between markers by default.

To hide a series line between a marker:

1. Create a line chart.
2. Select a series on the line chart.
3. On the *Series* tab, in the *Series* group drop-down menu, select the series that you want to hide.
4. In the *Line* Group, click *Connect Lines*.

The series line between the markers disappears.

To make the series line reappear, click *Connect Lines* again.

Procedure: How to Change the Appearance of a Marker

Markers are used to display points of data on a line chart. They are also used in the legend to identify the data that is on the chart. The different marker shapes distinguish one series from another.

1. Create a line chart.
2. Select a series on the line chart.
3. On the *Series* tab, in the *Line* group, click *Marker* to open a drop-down menu of options.
4. From the Marker drop-down menu, select the marker shape. For example, Diamond or Hourglass.

The markers are formatted.

The following image shows a triangle marker for gross profit data and a star marker for revenue data.

Procedure: How to Expand Pie Slices

1. Create a pie chart.
2. On the *Series* tab, in the *Select* group, from the drop-down menu, select one of the following:

- ☐ *All Series* expands all slices out from the center of the pie.
- ☐ A specific series expands that particular slice out from the center of the pie.

3. In the *Pie* group, click *Expand*.

The pie expands accordingly.

Procedure: How to Hide a Pie Slice

1. Create a pie chart.
2. On the *Series* tab, in the *Select* group, from the drop-down menu, select the series that you want to hide. Then, in the *Pie* group, click *Hide*.

The slice is hidden.

Procedure: How to Filter Values in a Series

1. Create a chart.
2. Select a series on the chart.
3. Open the Filter dialog box in one of the following ways:

☐ **Ribbon:** On the *Field* tab, in the *Filter* group, click *Filter*.

☐ **Shortcut Menu:** Right-click a series, and click *Filter Values*.

The Filter dialog box opens.

4. Select values for values and prompts.
5. Click *OK* to close the dialog box.

The series values are filtered.

Procedure: How to Sort the Fields in a Series

1. Create a chart.
2. Select a series.
3. Sort the series in one of the following ways:

☐ **Ribbon:** On the *Field* tab, in the *Sort* group, click *Up* to sort the series values from smallest to largest, or click *Down* to sort the series values from largest to smallest.

☐ **Shortcut Menu:** Right click a series on the chart, and point to *Sort*, and then *Sort* again. Click *Ascending* to sort the series values from smallest to largest, or click *Descending* to sort the series values from largest to smallest. Select *Limit* to open a list of values to display for a sort group.

The chart appears with the series sorted accordingly.

Procedure: How to Hide a Field in a Series

1. Create a chart or visualization.
2. Hide a field in a series in one of the following ways:

☐ Select the field in the Query pane.

☐ Right-click the field in the chart.

☐ **Ribbon:** Select the field in the Query pane or by right-clicking it in the chart. On the *Field* tab, in the *Display* group, click *Hide Field*. Click *Hide Field* again to make the series reappear.

- ❑ **Shortcut Menu:** Right-click a series in the Query pane, or in the chart, point to *Visibility*, and then click *Hide*. Right-click the same series, point to *Visibility*, and then click *Show* to make the series reappear.

The field is hidden.

Procedure: How to Display Aggregations on Measure Data

You can display numeric measure data using a variety of aggregation values.

1. Create a chart or visualization.
2. Open the list of Aggregation options in one of the following ways:

- ❑ **Ribbon:** On the *Field* tab, in the *Display* group, click *Aggregation*.

- ❑ **Shortcut Menu:** Right-click a series, point to *More*, and then *Aggregation Functions*.

3. Select an aggregation function.

The aggregation function is applied to the series.

Note: If you change the Measure (Sum) Query field container in the Query pane from Sum to Print, Count, or List, the change overrides all assigned aggregation values.

Procedure: How to Apply Traffic Light Conditions With Drill-Down to a Numeric Measure Field (By Constant)

1. Create a chart or visualization.
2. Open the Traffic Light Condition dialog box in one of the following ways:

- ❑ **Ribbon:** In the Query pane, select a field, and then on the *Field* tab, in the *Display* group, click *Traffic Lights*.

- ❑ **Shortcut Menu:** Right-click a series on the chart, point to *More*, and then click *Traffic Light Conditions*.

The Traffic Light Condition dialog box opens. For more information, see [Traffic Light Condition Dialog Box](#) on page 29.

3. From the Relational Operators drop-down menu below the field name, select a relational operator. For example, Equal to.
4. In the field to the right of the Relational Operators drop-down menu, click the down arrow for the Type drop-down menu.

The Type dialog box opens.

5. In the Type dialog box, select *Constant*.
6. Enter a value in the Value field, or
 - a. From the Get Values drop-down menu, select one of the following values All, First, Last, Minimum, Maximum, From File. The value that you select appears in the Get Values field.
 - b. Select the value in the Get Values field. The value that you selected appears in the Value field.
7. Click *OK*.
The value that you selected appears in the field to the right of the operator drop-down menu.
8. Click the *Color* button.
The Color dialog box opens.
9. Select a color.
10. Click *OK*.
The color appears in the Preview box.
11. Click *OK*.
12. Click the *Drill Down* button.
The Drill Down dialog box opens.
13. In the Drill Down dialog box, specify each of the following:
 - ☐ Drill down to a report or a webpage
 - ☐ URL of the webpage
 - ☐ An alternate comment
 - ☐ Target (New Window, Same Window)
 - ☐ Parameters that you want to use (Name, Value)
14. Click *OK* to close the dialog box.
15. Click the *New* button to set traffic light conditions for additional fields.

Procedure: How to Apply Traffic Light Conditions With Drill-Down to a Numeric Measure Field (By Field)

1. Create a chart or visualization.

2. Open the Traffic Light Condition dialog box in one of the following ways:

- ☐ **Ribbon:** In the Query pane, select a field, and then on the *Field* tab, in the *Display* group, click *Traffic Lights*.
- ☐ **Shortcut Menu:** Right-click a series on your chart, point to *More*, and then click *Traffic Light Conditions*.

The Traffic Light Condition dialog box opens. For more information, see [Traffic Light Condition Dialog Box](#) on page 29.

3. From the Relational Operators drop-down menu below the field name, select a relational operator. For example, Greater than.
4. In the field to the right of the operator drop-down menu, click the arrow for the Type drop-down menu.

The Type dialog box opens.

5. In the Type dialog box, select *Field*.

The Type dialog box displays the Dimensions, and Measures and Properties of your data. You can display the data in the following ways:

- ☐ View fields in business order. Select from the following options: Title, Description, Name, or Alias.
- ☐ View fields in a sortable grid. Select from the following options: Name, Title, Alias, Format, Segment, Filename, Description, or Reference.
- ☐ View the hierarchical structure of the data. Select from the following options: Title, Description, Name, or Alias.

6. Select a field.
7. Click *OK*.

The field that you selected appears in the field to the right of the operator drop-down menu.

8. Click the *Color* button.

The Color dialog box opens.

9. Select a color.

The color appears in the Preview box.

10. Click *OK*.
11. Click the Drill Down button.

The Drill Down dialog box opens.

12. In the Drill Down dialog box, specify each of the following:
 - ☐ Drill down to a report or a webpage
 - ☐ URL of the webpage
 - ☐ An alternate comment
 - ☐ Target (New Window, Same Window)
 - ☐ Parameters that you want to use (Name, Value)
13. Click *OK* to close the dialog box.
14. Click the *New* button to set traffic light conditions for additional fields.

Procedure: How to Change the Title of a Series

1. Create a chart or visualization.
 2. Open the Edit Title dialog box in one of the following ways:
 - ☐ **Shortcut Menu:** Right-click a series on the chart, and click *Change Title*.
 - ☐ **Query Pane:** Right-click a series, and click *Change Title*.

The Edit Title dialog box opens.
 3. In the Enter Title field, type the new name for the series.
 4. Click *OK* to close the dialog box.
- The series has a new title.

Procedure: How to Control the Color Mode

When you create a single-series chart, all series groups appear in the same color. To use a different color for each group, set the color mode to *By Group*.

1. Create a chart or visualization.
2. Right-click a series on the chart, point to *Color Mode*, and then click *By Group*.

A different color is applied to each group in the series. To return to the default display of the series in one color, right-click the series, point to *Color Mode*, and then click *By Series*.
3. Click *Run* to generate the report.

Procedure: How to Delete a Series

1. Create a chart or visualization.

2. Right-click a series on the chart, and click *Delete*.

The series is deleted.

Formatting Data Labels

Data labels highlight important data points on a chart. They identify exact numbers. You can customize data labels in a variety of ways to make them stand out more clearly on the chart. For example, you can change the position, angle, color, or size of data labels.

Associated Dialog Boxes

Whether you access data label options from the ribbon or the shortcut menu, you are presented with a dialog box of options. The following dialog boxes are commonly used for formatting data labels:

☐ Format Labels

☐ Style

☐ Line Style

For instructions on how to open these dialog boxes, see the procedures in [Using Data Labels Properties](#) on page 47.

Format Labels Dialog Box

The Format Labels dialog box contains options for editing data labels. The Format Labels dialog box offers different options depending on the chart type that you are using. Bar, line, and area charts share the same tabs.

The Format Labels dialog box contains the following tabs:

☐ General Options

☐ Advanced

☐ Pie Title (for pie charts only)

☐ Pie Labels (for pie charts only)

☐ Funnel Labels (for funnel and pyramid charts)

General Options Tab

Use the General Options tab to add data labels to a chart and set their position, angle, and radius.

The General Options tab contains the following options:

- ☐ **Show Data Labels.** Select this option to show data labels on a chart. Clear this option to suppress data labels.
- ☐ **Position.** Select an option from this drop-down menu to determine where the data label will be positioned. The options are:
 - ☐ Above
 - ☐ Below top edge
 - ☐ Center
 - ☐ Base
 - ☐ Center back
- ☐ **Format Labels.** Select from this drop-down menu of preset formats that can be applied to the labels. Some of the options include Use Pattern, Currency General, and Date Full.
- ☐ **Custom Format.** Enter a standard number format pattern for the data label. This option is only available when you select the *Use Pattern* option from the Format Labels drop-down menu.

The following table describes the characters that you can use in a custom format.

Character	Description
#	Is a digit.
0 (zero)	Shows as absent.
. (period)	Is a placeholder for decimal separator.
, (comma)	Is a placeholder for grouping separator.
; (semicolon)	Separates formats.
- (dash)	Is the default negative prefix.
% (percent)	Divides by 100 and shows as a percentage.
x	Determines that any other characters can be used in the prefix or suffix.

Character	Description
' (apostrophe)	Is used to quote special characters in a prefix or suffix.

- ☐ **Style Labels.** Click this icon to open the Style dialog box, where you can style text. For more information, see [Style Dialog Box](#) on page 46.
- ☐ **Show Cumulative Sums.** Select this option to have the data text labels show cumulative sums. Clear this option to have data text labels show individual sums. This option is available for stacked charts.
- ☐ **Show Stacked Total.** Select this option to display stacked totals. Data position should be set to *Center* to display a stacked total. This option is available for stacked charts.

Advanced Tab

Use the Advanced tab to modify additional data labels properties.

The Advanced tab contains the following options:

- ☐ **Show Zero Labels.** Select this option to display zero values in a chart. Clear this option to display all data values except zero.
- ☐ **Apply color to negative data labels.** Select this option to style negative data labels separately from positive data labels.
- ☐ **Color.** Click this icon to open the Color dialog box, where you can select a color for the negative number.

Pie Title Tab

Use the Pie Title tab to create and style a pie title.

The Pie Title tab contains the following options:

- ☐ **Show Pie Title.** Clear this option to suppress a pie title. Select this option to display a pie title. This is the default option.
- ☐ **Style Title.** Click this icon to open the Style dialog box, where you can style pie title text.

Pie Labels Tab

Use the Pie Labels tab to customize your pie data labels.

The Pie Labels tab contains the following options:

- ☐ **Label Position.** Select from this drop-down menu an option to control the display of feeler lines and labels on a pie chart.

- ☐ **Label Display.** Select from this drop-down menu an option to control the format of labels displayed next to feelers on a pie chart.
- ☐ **Format Labels.** Select from this drop-down menu of preset formats that can be applied to labels.
- ☐ **Custom Format.** Select this option to use a custom format from a list of preset formats. See the following table for a list and description of the characters that you can use in a custom format.
- ☐ **Style Labels.** Click this button to open the Style dialog box, where you can style text.

Ring Label

- ☐ **Show Ring Label.** Select this option to control the display of the total label on a pie ring chart.
- ☐ **Format Labels.** Select from this drop-down menu of preset formats that can be applied to labels.
- ☐ **Custom Format.** Enter a standard number format pattern for the data label. This option is only available when you select the *Use Pattern* option from the Format Labels drop-down menu.
- ☐ **Style Labels.** Click this button to open the Style dialog box, where you can style text.

Feeler Line

- ☐ **Line Style.** Click this button to open the Line Style dialog box, where you can edit the color, weight, and style of the feeler line.

Funnel Labels Tab

Use the Funnel Labels tab to customize the labels on a funnel or a pyramid chart.

The Funnel Labels tab contains the following options:

- ☐ **Label Position.** Select an option from this drop-down menu to control the display of feeler lines and labels on a funnel chart.
- ☐ **Format Labels.** Select from this drop-down menu of preset formats that can be applied to labels.
- ☐ **Custom Format.** Select this option to use a custom format. See the table in the previous section for a list and description of the characters that you can use in a custom format.
- ☐ **Style Labels.** Click this button to open the Style dialog box, where you can style text.

- ☐ **Style Value.** Opens the Style dialog box, where you can style the value.

Feeler Line

- ☐ **Show Feeler Lines.** (Default) Clear this option to suppress feeler lines. Select this option to display feeler lines.
- ☐ **Line Style.** Click this button to open the Line Style dialog box, where you can edit the color, weight, and style of the feeler line.

Note: While some style options, such as Show Pie Title and Show Feeler Lines, are enabled by default, a stylesheet applied to the chart may contain different settings that will override these default settings.

Style Dialog Box

The Style dialog box contains options to style the data labels.

The Style dialog box contains the following options:

- ☐ **Font.** Use the drop-down menu to change the font.
- ☐ **Font size.** Use the drop-down menu to change the numeric value for the font size.
- ☐ **Font style.** Click the appropriate button (bold, italic, underline) to style the selected text.
- ☐ **Text alignment.** Click the appropriate button (left, center, right) to align the selected text.
- ☐ **Font color.** Click the button to open the Color dialog box, where you can select the font color.
- ☐ **Reset to Quick Styles from Template.** Click the button to reset all settings to the default settings from the template.

Note: Reset only works while the Style dialog box is open. Once you click *OK*, all changes are committed. To undo global styling after it has been committed, you must use the *Undo* command on the Quick Access Toolbar.

Line Style Dialog Box

The Line Style dialog box contains options to style lines on a chart.

The Line Style dialog box contains the following options:

- ☐ **Color.** Click this button to open the Color dialog box, where you can select the color for the line.

- ☐ **Weight.** Click this button to open a drop-down menu of line weight options.
- ☐ **Style.** Click this button to open a drop-down menu of line style options.
- ☐ **Reset.** Click this button to reset the line to the default options.

Data Labels Elements Shortcut Menu

When you right-click a data label on a bar, line, or area chart, a menu of the following options opens:

- ☐ **Data Labels.** Point to this option to toggle between Show and Hide.
- ☐ **More Label Options.** Click this option to open the Format Labels dialog box.

The shortcut menu contains options that are available on the Series tab.

Using Data Labels Properties

The following sections contain procedures for customizing data labels.

Procedure: How to Show and Hide Data Labels

1. Create a chart or visualization.
2. You can access the option to show data labels in one of the following ways:
 - ☐ **Ribbon:** On the *Series* tab, in the *Properties* group, click *Data Labels*, and from the drop-down menu, click *More Data Label Options*. The Format Labels dialog box opens. On the General Options tab, select the *Show Data Labels* check box, and click *OK* to close the dialog box. You can use this dialog box to format and style the data labels. For more information, see [Format Labels Dialog Box](#) on page 42. To hide data labels, clear this option.
 - ☐ **Shortcut Menu:** Right-click a series on the chart, point to *Data Labels*, and then click *Show*. To hide data labels, right-click a series on the chart, point to *Data Labels*, and then click *Hide*.

The data labels appear, and are formatted and styled accordingly.

The following image shows a chart with data labels.

Procedure: How to Change the Position of Data Labels

1. On the *Series* tab, in the *Properties* group, click *Data Labels*.
2. On the menu, select the position for the data labels.

The data labels are positioned accordingly.

Formatting a Legend

A legend contains information that is necessary to accurately interpret the data on a chart. By default, a chart displays either a vertical axis title if there is a single measure field, or a legend if there are multiple measure fields.

Format Legend Dialog Box

Whether you access legend options from the ribbon or the shortcut menu, you are presented with the Format Legend dialog box of options. For instructions on how to open this dialog box, see [Using Legend Properties](#) on page 51.

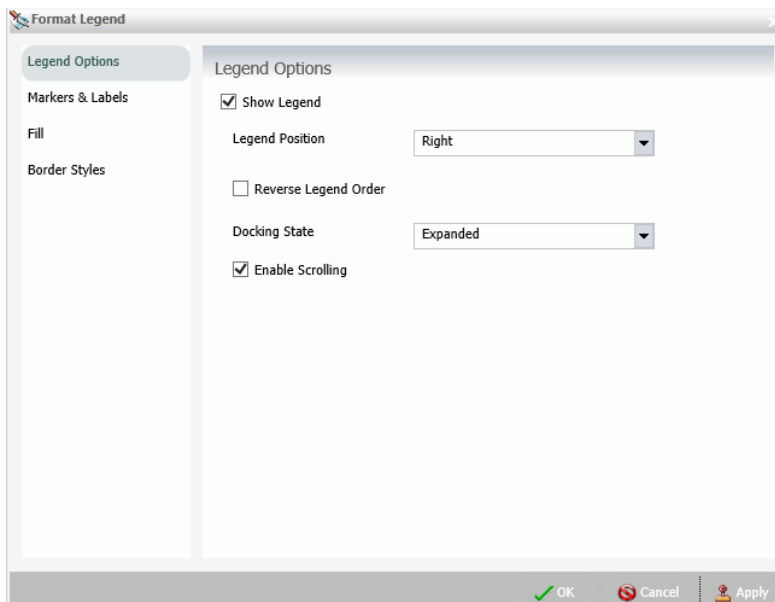

The Format Legend dialog box contains options for formatting a legend on a chart or visualization. It contains the following tabs:

- ☐ Legend Options
- ☐ Markers & Labels
- ☐ Fill
- ☐ Border Styles

For instructions on how to open this dialog box, see the procedures in [Using Legend Properties](#) on page 51.

Use the Legend Options tab to customize the appearance of a legend on a chart or visualization.

The Legend Options tab is shown in the following image.

The Legend Options tab contains the following options.

- ☐ **Show Legend.** When selected, a legend displays on a chart or visualization. Clear this option to suppress a legend on a chart or visualization.
- ☐ **Legend Position.** Opens a drop-down menu of options to position the legend. For example, top or left.

- ☐ **Reverse Legend Order.** Specifies that the legend be drawn in reverse order. Clear this option to specify that the legend be drawn in normal order.
- ☐ **Docking State.** This option dictates how the legend is docked. It is set to Expanded, by default, but you can set it to Collapsed, which will show that the legend is available (using the grey arrow). This option saves real estate in your chart by collapsing the categorical text labels in the legend while preserving the legend label colors. This is particularly useful when items in your legend have long labels and you wish to truncate them for the purposes of display. If you set this option to None, the ability to expand or collapse the legend is removed and the grey arrow no longer displays.
- ☐ **Enable Scrolling.** Select this check box to enable scrolling in your legend. This is particularly useful when you have numerous entries in your legend. This check box is selected, by default. To disable scrolling in your legend, clear the *Enable Scrolling* check box. All legend options display in columns, and a scroll bar does not display.

Use the Markers & Labels tab to customize the appearance of markers and labels on legends.

The Markers & Labels tab contains the following options:

- ☐ **Style Labels.** Opens the Style dialog box, where you can style text.
- ☐ **Marker Position.** Opens a drop-down menu of options to set the position of text relative to the legend marker. For example, Left of Text or Above Text.

Use the Fill tab to modify the color of the legend area. For more information, see [Format Series Dialog Box](#) on page 28.

Use the Border Styles tab to place a border around a legend. For more information, see [Format Series Dialog Box](#) on page 28.

The Border Styles tab contains the following options:

- ☐ **Show Border.** Select this option to place a border around a legend.
- ☐ **Color.** With the Show Border option selected, you can click this button to open the Color dialog box, where you can select a color for the border.

Legend Elements Shortcut Menu

When you right-click a legend on a chart, a menu of options opens. The menu contains options that are available on the Format tab.

The shortcut menu options are described in the following table. The table provides links to the sections of this document in which those options are also discussed.

Option	Description
Show legend	<p>Controls the display of the legend. InfoAssist+ displays the legend by default. When you clear this option, InfoAssist+ suppresses the legend. For instructions, see Using Legend Properties on page 51.</p> <p>The background shortcut menu has an option to restore the legend after it has been suppressed.</p>
Legend Position	Controls the placement of the legend on the chart. For instructions see, Using Legend Properties on page 51.
Legend Area Color	<p>Enables you to specify the color of the legend background area using the Color dialog box.</p> <p>This option is available only when you right-click the area around the legend. For instructions see, Using Legend Properties on page 51.</p>
Legend Border Color	<p>Enables you to specify the color of the border around the legend background area using the Color dialog box.</p> <p>This option is available only when you right-click the area around the legend. For instructions see, Using Legend Properties on page 51.</p>
More Legend Options	Opens the Format Legend dialog box.

Using Legend Properties

The following sections contain procedures for customizing legend. The procedures are organized by the tab and group in which their associated options appear on the ribbon.

Procedure: How to Hide a Legend

1. Create a chart or visualization with multiple measure fields.
2. Clear the *Show legend* option in one of the following ways:
 - ☐ **Ribbon:** On the *Format* tab, in the *Labels* group, click *Legend*, then click *Show legend* to clear the option.
 - ☐ **Shortcut Menu:** Right-click the legend, and clear the *Show legend* option.

The legend is hidden.

Procedure: How to Position a Legend

1. Create a chart or visualization with multiple measure fields.
2. Open the menu of label position options in one of the following ways:
 - ❑ **Ribbon:** On the *Format* tab, in the *Labels* group, click *Legend*, then point to *Legend Position*.
 - ❑ **Shortcut Menu:** Right-click the legend, and point to *Legend Position*.
3. Select a position for the legend. For example, *Auto* or *Right*.

Procedure: How to Specify the Color of a Legend Border

1. Create a chart or visualization with multiple measure fields.
2. Open the *Format Legends* dialog box in one of the following ways:
 - ❑ **Ribbon:** On the *Format* tab, in the *Labels* group, click *Legend*, then click *More Legend Options*.
 - ❑ **Shortcut Menu:** Right-click the legend, and click *More Legend Options*.

The *Format Legends* dialog box opens. For more information, see [Format Legend Dialog Box](#) on page 48.

3. On the *Border Styles* tab, select the option to *Show Border*.
4. Click the *Color* icon to open the *Color* dialog box, where you can specify the color of the legend border.
5. Click *OK* to close the *Color* dialog box.
6. Click *OK* to close the *Format Legend* dialog box.

The legend border is formatted accordingly.

The following image is an example of a bar chart with a styled legend.

Formatting Gridlines

Gridlines are used on a chart as a reference to help you understand the quantities and values of your data and decode information on the axis. There are four types of gridlines that you can display and edit on your chart. They are:

- ☐ Horizontal major gridlines
- ☐ Horizontal minor gridlines
- ☐ Vertical major gridlines
- ☐ Vertical minor gridlines

Major gridlines enhance the display of values, while minor gridlines supplement major gridlines. If a plot point falls in between major gridlines, you can use minor gridlines for more precise interpretation of the data.

- ☐ Vertical gridlines in a vertical chart run on the X axis.
- ☐ Horizontal gridlines in a vertical chart run on the Y axis.
- ☐ Horizontal major gridlines enhance the display of values, compared to the Y-axis scale alone. They are enabled by default on many charts. They do not apply to the pie, 3D, gauge, spectral map, or funnel chart type.

- ☐ Horizontal minor gridlines are disabled by default. They do not apply to the pie, 3D, gauge, spectral map, or funnel chart type.
- ☐ Vertical major gridlines enhance the display of values, compared to the X-axis scale alone. They are enabled by default. They do not apply to the pie, 3D, gauge, spectral map, or funnel chart type.
- ☐ Vertical minor gridlines are disabled by default. They do not apply to the pie, 3D, gauge, spectral map, or funnel chart type.

Note: The orientation of a chart determines the available gridline options.

Format Grid Lines Dialog Box

You can format horizontal and vertical gridlines, color bands, and frames on a chart using the options in the Format Grid Lines dialog box. For instructions on how to open this dialog box, see the procedures in [Using Gridline Properties](#) on page 57.

Color bands come in a pair, with each band uniquely colored. They appear in a continually repeating pattern behind a series on a chart. The contrast of colors is designed to make the chart easier to read.

Alternate formatting can be used to apply different colors to sections, called regions, of an axis.

The Format Grid Lines dialog box contains the following tabs:

- ☐ Major Grid Lines
- ☐ Minor Grid Lines
- ☐ Color Bands
- ☐ Frames

Use the Major Grid Lines tab to format the major gridlines on the chart.

The Major Grid Lines tab contains the following options:

- ☐ **Show Grid Lines.** Select this option to display major gridlines on a chart if minor gridlines are the default for the chart.
- ☐ **Line Style.** Click this icon to open the Line Style dialog box, where you can edit the color, weight, and style of the gridline.
- ☐ **Show Ticks.** Select this check box to enable or disable the tick mark functionality.

- ☐ **Tick Style.** Select from this drop-down menu of tick styles (Inside, Outside, Spanning).
- ☐ **Line Style.** Click this icon to open the Line Style dialog box, where you can edit the color, weight, and style of the gridline.

Use the Minor Grid Lines tab to format the minor gridlines on your chart.

The Minor Grid Lines tab contains the following options:

- ☐ **Show Grid Lines.** Select this option to display minor gridlines on a chart. By default, this option is enabled.
- ☐ **Line Style.** Click this icon to open the Line Style dialog box, where you can edit the color, weight, and style of the gridline.
- ☐ **Grid count.** Set the number of minor gridlines that will appear between major gridlines.
- ☐ **Show Ticks.** Select this check box to enable or disable the tick mark functionality.
- ☐ **Tick Style.** Select from this drop-down menu of tick styles (Inside, Outside, Spanning).
- ☐ **Line Style.** Click this icon to open the Line Style dialog box, where you can edit the color, weight, and style of the gridline.

Use the Color Bands tab to format the color bands on your chart.

The Color Bands tab contains the following options:

- ☐ **Band 1.** Select this option to add Band 1 to a chart.
 - ☐ **Color.** Click this icon to open the Color dialog box, where you can edit the color of Band 1.
 - ☐ **Transparency.** Move the slider to make Band 1 opaque (0%) or transparent (100%). The default is 0%.
 - ☐ **%.** Enter or select the percentage of the transparency of Band 1.
- ☐ **Band 2.** Select this option to add Band 2 to a chart.
 - ☐ **Color.** Click this icon to open the Color dialog box, where you can edit the color of Band 2.
 - ☐ **Transparency.** Move the slider to make the Band 2 opaque (0%) or transparent (100%). The default is 0%.
 - ☐ **%.** Enter or select the percentage of the transparency of Band 2.

Use the Quadrant Lines tab to control the placement and style of the quadrant lines in your scatter and bubble chart.

The Quadrant Lines tab contains the following options:

- ☐ **Show Quadrant Line.** Select this option to show the quadrant line. Clear this option to suppress the quadrant line.
- ☐ **Value.** Enter a value to control where the quadrant line will be placed on the X axis.
- ☐ **Line Style.** Click this icon to open the Line Style dialog box, where you can edit the color, weight, and style of the quadrant line.

Use the Frames tab to enable or disable frame regions, and to set the location and style of the frame text.

The Frames tab contains the following options:

- ☐ **Show Frame Regions.** Select this option to show a frame region. Clear this option to suppress a frame region.
- ☐ **Region.** Select from this drop-down list, the region that you want to format.
- ☐ **Add.** Click this button to add a region.
- ☐ **Remove.** Click this button to remove a region.
- ☐ **Location.** Enter the location of the region.
- ☐ **Color.** Click this icon to open the Color dialog box, where you can edit the color of the frame.
- ☐ **Border Color.** Click this icon to open the Color dialog box, where you can edit the color of the frame border.
- ☐ **Text.** Enter the text that you want to appear on the frame.
- ☐ **Style Text.** Click this icon to style the frame text.

For instructions on how to open this dialog box, see the procedures in [Using Gridline Properties](#) on page 57.

Gridline Elements Shortcut Menu

When you right-click a gridline on a chart, a menu of options opens. The options for the gridline elements are described in the following table.

Element	Option	Description
Horizontal Major Gridlines	Delete	Removes the gridline from the chart and updates the Live Preview accordingly.
Horizontal Minor Gridlines		
Vertical Major Gridlines	Set Line Color	Enables you to specify the color of the gridline, using the Color dialog box. For more information, see Color Dialog Box on page 21.
Vertical Minor Gridlines		
	More Grid Lines Options	Opens the Format Gridlines dialog box.

Using Gridline Properties

The following sections contain procedures for customizing gridlines.

Procedure: How to Display Horizontal Major Gridlines

If your chart does not display gridlines by default, use this procedure to generate gridlines.

1. Create a chart or visualization.
2. On the *Format* tab, in the *Features* group, open the *Grid* drop-down menu, point to *Horizontal Gridlines*, and then click *Major Gridlines*.

Horizontal major gridlines are added to the chart.

Procedure: How to Display Horizontal Minor Gridlines

1. Create a chart or visualization.
2. Access the option to show gridlines in one of the following ways:
 - ☐ **Ribbon:** On the *Format* tab, in the *Features* group, open the *Grid* drop-down menu. On the *Grid* drop-down menu, point to *Horizontal Gridlines*, and then click *Minor Gridlines*.
 - ☐ **Shortcut Menu:** Right-click the gridlines on the chart, and click *More Grid Lines Options*. The *Format Horizontal Grid Lines* dialog box opens. On the *Minor Grid Lines* tab, select *Show Grid Lines*.

Horizontal minor gridlines are added to the chart.

Procedure: How to Display Vertical Major Gridlines

1. Create a chart or visualization.
2. Access the option to show gridlines in one of the following ways:
 - ❑ **Ribbon:** On the *Format* tab, in the *Features* group, open the *Grid* drop-down menu. On the *Grid* drop-down menu, point to *Vertical Gridlines*, and then click *Major Gridlines*.
 - ❑ **Shortcut Menu:** Right-click the gridlines on the chart, and click *More Grid Lines Options*. The *Format Vertical Grid Lines* dialog box opens. On the *Major Grid Lines* tab, select *Show Major Grid Lines*.

Vertical major gridlines are added to the chart.

Procedure: How to Display Vertical Minor Gridlines

1. Create a chart or visualization.
2. Access the option to show gridlines in one of the following ways:
 - ❑ **Ribbon:** On the *Format* tab, in the *Features* group, open the *Grid* drop-down menu. On the *Grid* drop-down menu, point to *Vertical Gridlines*, and then click *Minor Gridlines*.
 - ❑ **Shortcut Menu:** Right-click the gridlines on the chart, and click *More Grid Lines Options*. The *Format Vertical Grid Lines* dialog box opens. On the *Minor Grid Lines* tab, select *Show Minor Grid Lines*.

Vertical minor gridlines are added to the chart.

Procedure: How to Set the Color, Weight, and Style of a Gridline

1. Open the *Format Grid Lines* dialog box in one of the following ways:
 - ❑ **Ribbon:** On the *Format* tab, in the *Features* group, open the *Grid* drop-down menu, point to the gridline type that you want to format, and click *More Grid Lines Options*.
 - ❑ **Shortcut Menu:** Right-click a gridline, and click *More Grid Lines Options*.The *Format Grid Lines* dialog box opens.
2. Click the *Line Style* icon.
The *Line Style* dialog box opens.
3. Set the color, weight, and style of the gridline.
4. Click *OK* to close the *Line Style* dialog box.
5. Click *OK* again to close the *Format Grid Lines* dialog box.

The gridline is formatted accordingly.

The following image shows a line chart with styling applied to the gridlines.

Procedure: How to Set Ticks

Ticks are short lines which are perpendicular to a gridline. They are used to tick off specific increments along the gridline.

1. Create a chart or visualization with gridlines.
2. Open the Format Grid Lines dialog box in one of the following ways:
 - ☐ **Ribbon:** On the *Format* tab, in the *Features* group, open the Grid drop-down menu, point to the gridline type that you want to format, and click *More Grid Lines Options*.
 - ☐ **Shortcut Menu:** Right-click a gridline, and click *More Grid Lines Options*.

The Format Grid Lines dialog box opens.

3. From the Tick Style drop-down menu select a tick style option. The options are:
 - ☐ Inside
 - ☐ Outside
 - ☐ Spanning

4. Click the *Line Style* icon to open the Line Style dialog box, where you can edit the color, weight, and style of the gridline.
5. Click *OK* to close the Line Style dialog box.
6. Click *OK* again to close the Format Grid Lines dialog box.

The tick marks are formatted accordingly.

The following image shows a chart with tick marks spanning both the vertical axis and horizontal axis.

Procedure: How to Set Color Bands

1. Create a chart or visualization with gridlines.
2. Open the Format Grid Lines dialog box in one of the following ways:
 - ☐ **Ribbon:** On the *Format* tab, in the *Features* group, open the Grid drop-down menu, point to the gridlines that you want to format, and click *More Grid Lines Options*.
 - ☐ **Shortcut Menu:** Right-click a gridline, and click *More Grid Lines Options*.

The Format Grid Lines dialog box opens.

3. On the Color Bands tab, click the *Color* icon to open the Color dialog box, where you can set the color of the color bands.

4. Use the transparency slider, or the percentage box, to type or select the percentage of the transparency that you want to apply to the color.
5. Click *OK* to close the Color dialog box.
6. Click *OK* again to close the Format Grid Lines dialog box.

The following image shows a chart with color bands along the horizontal gridline.

Procedure: How to Delete a Gridline

1. Create a chart or visualization with gridlines.
2. Select a gridline.
3. Delete the gridline in one of the following ways:
 - ☐ **Ribbon:** On the *Format* tab, in the *Features* group, open the *Grid* drop-down menu. From the menu, point to the gridline that you want to format, and click *More Grid Lines* to open the Format Grid Lines dialog box. On the tab for the gridline that you want to delete, clear the *Show Grid Lines* option, and click *OK*.
 - ☐ **Shortcut Menu:** Right-click the gridline, and from the menu, select *Delete*.

The gridline is deleted from the chart.

Procedure: How to Display Quadrant Lines

Use the options on the Quadrant Lines tab to control the placement and style of the quadrant lines in your scatter and bubble chart.

1. Create a scatter chart.
2. On the *Format* tab, in the *Features* group, click *Grid*.
3. On the drop-down menu, point to either Horizontal Gridlines or Vertical Gridlines, and then click *More Grid Lines Options*.

The Format Grid Lines dialog box opens.

4. On the Quadrant Lines tab, select *Show Quadrant Line*.

The quadrant line displays on the chart.

5. Click *OK* to close the Format Grid Lines dialog box.

Procedure: How to Add Frames to Regions on a Chart

1. Create a chart or visualization.
2. On the *Format* tab, in the *Features* group, click *Grid*.
3. On the drop-down menu, point to either Horizontal Gridlines or Vertical Gridlines, and then click *More Grid Lines Options*.

The Format Grid Lines dialog box opens.

4. On the Frames tab, select the *Show Frame Regions* check box.
5. Click *Apply*.

Colored frames are added to the chart, using the default styling options. Optionally, you may use the color and border color options to change these.

The following image shows a bar chart with colored frames around each region.

Formatting Axis Labels

Vertical and horizontal axes are based on the orientation of the graph. For example, in a vertical graph, the horizontal axis refers to the X axis and the vertical axis refers to the Y axis. In a horizontal graph, the horizontal axis refers to the Y axis and the vertical axis refers to the X axis. This is important to consider, since options could change depending on the orientation of the graph.

A chart can contain the following types of axis labels:

- ☐ Horizontal axis labels represent the X axis. They do not apply to pie, funnel, or gauge charts.
- ☐ Vertical axis labels represent the Y1 axis in a single axis chart. They represent a numeric scale, usually located on the left side of a vertical chart.

- ☐ Secondary horizontal and vertical labels can only be used when dual axes charts are selected.

Format Axis Dialog Box

Whether you access axis options from the ribbon, or the shortcut menu, you are presented with the Format Axis dialog box of options for formatting for both vertical and horizontal axes. The Format Axis dialog box contains the following tabs:

- ☐ General
- ☐ Scale
- ☐ Title
- ☐ Labels
- ☐ Advanced

Reference: Format Vertical Axis Dialog Box

You use the Format Vertical Axis dialog box to specify formatting options for the vertical axis in your chart.

Use the Scale tab to modify scale properties.

The Scale tab contains the following options:

- ☐ **Automatic Minimum.** Supplies the minimum value on the Y-axis scale automatically. To use manual scaling, clear this option. You can then set the minimum value by entering a number into the Value text box.
 - ☐ **Value.** Type the minimum value in this text box if you have not selected Automatic Minimum.
- ☐ **Automatic Maximum.** Supplies the maximum value on the Y-axis scale automatically. To use manual scaling, clear this option. You can then set the maximum value by entering a number into the Value text box.
 - ☐ **Value.** Type the maximum value in this text box if you have not selected Automatic Maximum.

- ☐ **Automatic Grid Step.** Calculates the number of major grid steps automatically. To use manual scaling, clear this option. You can then set the value by typing the number into the Value text box.
- ☐ **Value.** Type the value in this text box if you have not selected Automatic Grid Step.
- ☐ **Logarithmic Scale.** Controls whether or not the Y-axis scale progresses logarithmically instead of linearly. This option is disabled by default. When selected, the logarithmic base is set to 10.0, but can be changed by entering another value.
- ☐ **Log scale base.** Type the base value to be shown on the logarithmic scale.
- ☐ **Include zero on scale.** Controls whether or not a zero (0) value appears on the scale. This option is enabled by default.

Use the Title tab to show or hide the axis title, and create and style the title for the axis.

The Title tab contains the following options:

- ☐ **Show title.** Select this check box to show the axis title (default) or clear the check box to hide the axis title.
- ☐ **Text.** Type a title for the axis in the Text field.
- ☐ **Style text.** Opens the Style dialog box, where you can style the text.

Use the Labels tab to format the layout of the axis labels.

The Labels tab contains the following options:

- ☐ **Show Labels.** Displays labels next to the axis. This is enabled by default. Clear this option to suppress labels.
- ☐ **Axis side.** Contains a list of position options for the labels on the axis. The options are Left (default), Right, or Both.
- ☐ **Style labels.** Opens the Style dialog box, where you can style text.
- ☐ **Format Labels.** Contains a list of preset formats that can be applied to the labels.
- ☐ **Custom Format.** Allows you to use a custom format. This option is activated when *Use Pattern /100* and *Use Pattern* are selected as the format labels.

The Format Labels drop-down menu provides a list of preset formats that you can apply to labels. When you select a custom format, it must be defined using a custom format pattern. See the following table for a list and description of the characters that you can use in a custom format.

Character	Description
#	Is a digit.
0 (zero)	Shows as absent.
. (period)	Is a placeholder for a decimal separator.
, (comma)	Is a placeholder for a grouping separator.
; (semicolon)	Separates formats.
- (dash)	Is the default negative prefix.
% (percent)	Divides by 100 and shows as a percentage.
x	Determines that any other characters can be used in the prefix or suffix.
' (apostrophe)	Is used to quote special characters in a prefix or suffix.

Use the Advanced tab to modify additional axis properties.

The Advanced tab contains the following options:

- ☐ **Exclude Minimum Label.** Excludes the label with the lowest axis value from the chart.
- ☐ **Exclude Maximum Label.** Excludes the label with the highest axis value from the chart.
- ☐ **Descending Axis.** Draws the axis in descending order.
- ☐ **Show axis line.** Controls the display of the axis baseline.
 - ☐ **Line Style.** Opens the Line Style dialog box, where you can edit the color, weight, and style of the axis line.
- ☐ **Show zero line.** Controls the display of the zero line.
 - ☐ **Line Style.** Opens the Line Style dialog box, where you can edit the color, weight, and style of the zero line.
- ☐ **Custom Baseline.** Controls the display of the custom baseline.
 - ☐ **Value.** Type a value for the custom baseline.
 - ☐ **Line Style.** Opens the Line Style dialog box, where you can edit the color, weight, and style of the custom baseline.

For instructions on how to open this dialog box, see the procedures in [Using Axis Properties](#) on page 69.

Reference: Format Horizontal Axis Dialog Box

You use the Format Horizontal Axis dialog box to specify formatting options for the horizontal axis in your chart.

The General tab contains the Show axis line check box, which controls the display of the axis line. When this check box is selected, you can style the axis line.

The General tab contains the following options:

- ☐ **Show axis line.** Enables the display of the axis line.
 - ☐ **Line Style.** Opens the Line Style dialog box, where you can edit the color, weight, and style of the axis line.

Use the Title tab to create and style the title for the axis.

The Title tab contains the following options:

- ☐ **Text.** Type a title for the axis in the Text field.
- ☐ **Style.** Opens the Style dialog box, where you can style the text.

Use the Labels tab to format the layout of the axis labels.

The Labels tab contains the following options:

- ☐ **Show Labels.** Displays labels next to the axis. This is enabled by default. Clear this option to suppress labels.
 - ☐ **Axis side.** Contains a list of position options for the labels on the axis. The options are Left (default), Right, or Both.
 - ☐ **Style labels.** Opens the Style dialog box, where you can style text.
- ☐ **Stagger Labels.** Sets the labels to appear staggered.
- ☐ **Concatenate Labels.** Concatenates the labels in your chart. This is enabled by default.

Use the Advanced tab to modify additional axis properties.

The Advanced tab contains the following options:

- ☐ **Exclude Minimum Label.** Excludes the label with the lowest axis value from the chart.
- ☐ **Exclude Maximum Label.** Excludes the label with the highest axis value from the chart.

- ☐ **Reverse Groups.** Reverses the order of the display of the groups on the horizontal axis.
For instructions on how to open this dialog box, see the procedures in [Using Axis Properties](#) on page 69.

Secondary Axes Options

Formatting options are available for secondary axes in dual-axis charts. For example, in a vertical dual-axis chart, the secondary vertical axis refers to the Y2 axis.

The Format Secondary Axis dialog box contains the following tabs for both vertical and horizontal axes:

- ☐ **General.** For more information, see the Scale tab options in [Format Axis Dialog Box](#) on page 64.
- ☐ **Title.** For more information, see the equivalent tab in [Format Axis Dialog Box](#) on page 64.
- ☐ **Labels.** For more information, see the equivalent tab in [Format Axis Dialog Box](#) on page 64.
- ☐ **Advanced.** For more information, see the equivalent tab in [Format Axis Dialog Box](#) on page 64.

Axis Elements Shortcut Menu

When you right-click an axis label or title in a chart in Live Preview, a menu of options opens. The options for the right-click axis label elements are described in the following table.

Element	Option	Description
Axis Title	Delete	Deletes the axis title from the chart and updates the Live Preview accordingly.
	Change Title	Enables you to change the axis title.
	Style Title	Enables you to apply styling to the axis title, using the Style dialog box. For more information, see Style Dialog Box on page 46.

Element	Option	Description
Horizontal Labels	Delete	Deletes labels from the chart and updates the Live Preview accordingly.
	Stagger	Controls the positioning of the labels. The On value positions the labels in a zigzag pattern. The Off default value positions the labels in a straight row.
	Rotate	Rotates the labels a specified number of degrees.
	Style Labels	Enables you to apply styling to the labels, using the Style dialog box. For more information, see Style Dialog Box on page 46.
	More Axis Options	Opens the Format Axis dialog box. For more information, see Formatting Axis Labels on page 63.
Vertical Labels	Delete	Deletes labels from the chart and updates the Live Preview accordingly.
	Rotate	Rotates the labels a specified number of degrees.
	Format Labels	Formats the labels according to the value that you specify.
	Style Labels	Enables you to apply styling to the labels, using the Style dialog box. For more information, see Style Dialog Box on page 46.
	More Axis Options	Opens the Format Axis dialog box. For more information, see Formatting Axis Labels on page 63.

Using Axis Properties

The following sections contain procedures for customizing an axis. The procedures are organized by the tab and group in which their associated options appear on the ribbon.

Axis labels appear by default.

Procedure: How to Delete Axis Labels

1. Create a chart or visualization.

2. You can delete axis labels in one of the following ways:

- ❑ **Ribbon:** On the *Format* tab, in the *Labels* group, open the *Axes* drop-down menu, point to the axis that you are working with, and clear the *Show Labels* option.
- ❑ **Shortcut Menu:** Right-click an axis label on the chart, and click *Delete*.

The axis labels are deleted from the chart.

Procedure: How to Stagger Axis Labels

Note: You can only apply a staggered effect to horizontal axis labels.

1. Create a chart or visualization with at least one axis label on display.
2. Access the *Stagger* option in one of the following ways:

- ❑ **Ribbon:** On the *Format* tab, in the *Labels* group, open the *Axes* drop-down menu, point to the axis that you are working with, and click *Stagger Labels*.
- ❑ **Shortcut Menu:** Right-click an axis label on the chart, point to *Stagger* and select *On*.

The axis labels are staggered.

Procedure: How to Rotate Axis Labels

1. Create a chart or visualization with axis labels.
2. Access the *Rotate* option in one of the following ways:

- ❑ **Ribbon:** On the *Format* tab, in the *Labels* group, open the *Axes* drop-down menu, point to the axis that you are working with, point to *Rotate Labels*, and then click the degree to which you want to rotate the axis labels.
- ❑ **Shortcut Menu:** Right-click an axis label on the chart, point to *Rotate*, and then click the degree to which you want to rotate the axis labels.

The axis labels are rotated.

Procedure: How to Format Axis Labels

1. Create a chart or visualization with an axis label.
2. Access the list of axis label options in one of the following ways:

- ❑ **Ribbon:** On the *Format* tab, in the *Labels* group, open the *Axes* drop-down menu, point to the axis that you are working with, and click *More Axis Options* to open the *Format Axis* dialog box. Open the *Labels* tab, and from the *Labels* option drop-down menu, select the formatting option that you want.

- ❑ **Shortcut Menu:** Right-click an axis label, point to *Format Labels*, and click the formatting option that you want.

The axis labels are formatted accordingly.

Procedure: How to Manually Set the Scale of an Axis

1. Create a chart or visualization.
 2. Open the *Format Axis* dialog box in one of the following ways:
 - ❑ **Ribbon:** On the *Format* tab, in the *Labels* group, open the *Axes* drop-down menu, point to the axis that you are working with, and click *More Axis Options*.
 - ❑ **Shortcut Menu:** Right-click an axis value on the chart, and click *More Axis Options*.
- The *Format Axis* dialog box opens.
3. On the *scale* tab, clear the *Automatic Minimum* option and enter your own minimum value in the *Value* text box.
 4. Clear the *Automatic Maximum* option, and enter your own maximum value in the *Value* text box.
 5. Clear the *Automatic Grid Step* option, and enter your own grid step value in the *Value* text box.
 6. Optionally, you can select the *Logarithmic Scale* option and enter the log scale base in the text field of that name. You can also clear the *Include zero on scale* option if you do not want zero to appear on the axis.
 7. Click *OK* to close the dialog box.

The axis scale is set accordingly.

Procedure: How to Add an Axis Title

1. Create a chart or visualization with an axis label.
2. Open the *Format Axis* dialog box in one of the following ways:
 - ❑ **Ribbon:** On the *Format* tab, in the *Labels* group, open the *Axes* drop-down menu, point to the axis that you are working with, and click *More Axis Options*.
 - ❑ **Shortcut Menu:** Right-click an axis label, and click *More Axis Options*.

The *Format Axis* dialog box opens.

3. On the *Title* tab, type the axis title in the *Text* field.
4. Click the *Style text* icon to open the *Style* dialog box, where you can style the text.

The axis title is styled accordingly.

Note: Right-click the axis title to delete, change, or style the axis title.

Procedure: How to Set Advanced Axis Properties

1. Create a chart or visualization with an axis label.
2. Open the Format Axis dialog box in one of the following ways:
 - ☐ **Ribbon:** On the *Format* tab, in the *Labels* group, open the *Axes* drop-down menu, point to the axis that you are working with, and click *More Axis Options*.
 - ☐ **Shortcut Menu:** Right-click an axis label, and click *More Axis Options*.

The Format Axis dialog box opens.

3. On the *Advanced* tab, set the following options:
 - ☐ Exclude Minimum Label
 - ☐ Exclude Maximum Label
 - ☐ Descending Axis
 - ☐ Show axis line
 - ☐ Show zero line
 - ☐ Custom Baseline (Value)

You can edit the color, weight, and style of all the lines that you set in the *Line Style* dialog box.

4. Click *OK*.

The axis advanced options are set accordingly.

Formatting a Frame and a Background

The frame of a chart is the area that contains the plot points. It is also the area in which horizontal and vertical gridlines are drawn.

The background of a chart is the area around the frame.

You can adjust the appearance of the frame and background to achieve different visual effects for your charts. For example, you can change the appearance of the chart frame line, or you can change the color of the background of your chart, as shown in the following image.

Frame & Background Dialog Box

Whether you access frame and background options from the ribbon, or the shortcut menu, you are presented with the Frame & Background dialog box of options for formatting the frame and background of a chart. The Frame & Background dialog contains the following tabs:

- ☐ Frame
- ☐ Frame Edge
- ☐ Background

The Frame & Background dialog box and pertinent tabs are discussed in this section for the following types of charts:

- ☐ 2D Charts and 2D Charts with 3D Effects (Frame and Frame Edge tabs)
- ☐ Pie Charts (Frame and Frame Edge tabs)
- ☐ 3D Charts (Left Wall, Right Wall, Floor, and Advanced tabs)

Note: The options in the Frame tab vary based on the chart type selected.

Use the Frame tab for 2D charts and 2D charts with 3D effects to set a frame depth angle and depth radius, select a fill for a frame, and set a shadow for a frame for these types of charts.

The Frame tab for 2D charts and 2D charts with 3D effects contains the following options:

- ☐ **Depth Angle.** Enter the angle from the front of the chart to the back where the chart risers and frames are drawn. You can set the depth angle from zero to 180 degrees, but it must be used along with Depth Radius.
- ☐ **Depth Radius.** Enter how far out the extruded frame will be extended. Small values, such as zero, produce very narrow charts. Large values, the maximum being 100, produce thicker charts.

Fill

- ☐ **No fill.** (Default). Select this option to keep the legend colorless.
- ☐ **Solid fill.** Select this option to display the Color and Transparency options.
 - ☐ **Color.** Click this icon to open the Color dialog box, where you can select a color for a frame.
 - ☐ **Transparency.** Move the slider to make the frame opaque (0%) or transparent (100%). The default is 0%.
- ☐ **Gradient fill.** Select this option to display the direction of the gradient, the color pattern of the gradient, and the degrees of transparency for the two colors that make up the gradient. A gradient is a smooth color transition or blending of one color to another. The number of colors to use in a gradient is defined by the *stop* or *pin* elements.
 - ☐ **Direction.** Select from this drop-down menu to set the direction of the gradient fill. For example, Gradient right or Gradient left.

Gradient style

- ☐ **Color Pattern.** Select the color pattern for the data series. The color pattern option on the left is an AB wash that uses two colors in the pattern color1 - color2, for example, red-green. The color pattern option on the right is an ABA wash that uses two colors in the pattern color1 - color2 - color1, for example, red-green-red.
- ☐ **First Color.** Click this icon to open the Color dialog box, where you can select a color for the first color.
- ☐ **Second Color.** Click this icon to open the Color dialog box, where you can select a color for the second color.

Shadow

- ☐ **Show Shadow.** Select this option to set a shadow.

Use the Frame Edge tab for 2D charts and 2D charts with 3D effects to set a frame depth angle and depth radius, select a fill for a frame, and set a shadow for a frame for these types of charts.

The Frame tab for 2D charts and 2D charts with 3D effects contains the following options:

- ☐ **Automatically Shade Frame Edge.** Select this option to automatically shade the frame edge. Clear this option to enable the Side Frame and Bottom Frame options.

Side Frame

- ☐ **Show Color.** Select this option to show the color of the side frame.
- ☐ **Color.** Click this icon to open the Color dialog box, where you can select a color for the side frame.
- ☐ **Show Border Color.** Select this option to show the color of the border of the side frame.
- ☐ **Border Color.** Click this icon to open the Color dialog box, where you can select a color for the border of the side frame.

Bottom Frame

- ☐ **Show Color.** Select this option to show the color of the bottom frame.
- ☐ **Color.** Click this icon to open the Color dialog box, where you can select a color for the bottom frame.
- ☐ **Show Border Color.** Select this option to show the color of the bottom frame.
- ☐ **Border Color.** Click this icon to open the Color dialog box, where you can select a color for the border of the bottom frame.

Use the Frame tab for pie charts to set pie depth and tilt, select a fill and color for a pie frame, and set a shadow for the frame.

The Frame tab for pie charts contains the following options:

- ☐ **Pie Depth.** Set the depth of the edge of a pie chart. You can select a value from zero to 100 to set the thickness of an edge.
- ☐ **Pie Tilt.** Set the tilt of the pie chart. The smaller the value you add, the flatter the pie chart appears. The larger the value you add, more of the pie edge appears.

Fill

- ☐ **No fill.** (Default). Results in no color added to the edge of the pie.
- ☐ **Solid fill.** Select this option to display the Color and Transparency options.
 - ☐ **Color.** Click this icon to open the Color dialog box, where you can select a color for the frame.
 - ☐ **Transparency.** Move the slider to make the fill opaque (0%) or transparent (100%). The default is 0%.
- ☐ **Gradient fill.** Select this option to display the direction of the gradient, the color pattern of the gradient, and the degrees of transparency for the two colors that make up the gradient. A gradient is a smooth color transition or blending of one color to another. The number of colors to use in a gradient is defined by the *stop* or *pin* elements.
- ☐ **Direction.** Select from this drop-down menu to set the direction of the gradient fill. For example, Gradient right or Gradient left.
- ☐ **Gradient Style**
 - ☐ **Color Pattern.** Select the color pattern for the data series. The color pattern option on the left is an AB wash that uses two colors in the pattern color1 - color2, for example, red-green. The color pattern option on the right is an ABA wash that uses two colors in the pattern color1 - color2 - color1, for example, red-green-red.
 - ☐ **First Color.** Click this icon to open the Color dialog box, where you can select a color for the first color.
 - ☐ **Second Color.** Click this icon to open the Color dialog box, where you can select a color for the second color.

Shadow

- ☐ **Show Shadow.** Select this option to set a shadow around the frame.

Use the Frame Edge tab for pie charts to set the edge of a pie frame.

The Frame Edge tab for pie charts contains the following options:
- ☐ **Automatically Shade Frame Edge.** Select this option to automatically shade the frame edge. Clear this option to enable the Side Frame and Bottom Frame options.
- ☐ **Show Color.** Select this option to show the color of the side frame.
- ☐ **Color.** Click this icon to open the Color dialog box, where you can select a color for side frame.

- ☐ **Show Border Color.** Select this option to show the color of the border of the side frame.
- ☐ **Border Color.** Click this icon to open the Color dialog box, where you can select a color for the border of the side frame.

Bottom Frame

- ☐ **Show Color.** Select this option to show the color of the bottom frame.
- ☐ **Color.** Click this icon to open the Color dialog box, where you can select a color for the bottom frame.
- ☐ **Show Border Color.** Select this option to show the color of the bottom frame.
- ☐ **Border Color.** Click this icon to open the Color dialog box, where you can select a color for the border of the bottom frame.

Use Wall and Floor tabs to set the walls and floor of a 3D chart.

These Wall and Floor tabs contain the following options:

- ☐ **Show Wall or Show Floor.** Select this option to show the wall or floor (depending on the tab) of the 3D chart.
- ☐ **Wall Thickness.** Specify the thickness of the wall or floor.
- ☐ **Cube Size.** Specify the cube size of the wall or floor.
- ☐ **Color.** Click this icon to open the Color dialog box, where you can select a color for the wall or floor.
- ☐ **Border Color.** Click this icon to open the Color dialog box, where you can select a color for the border of the wall or floor.
- ☐ **Show Wall (Left Wall).** Select this option to show the left wall.
- ☐ **Show Wall (Right Wall).** Select this option to show the right wall.
- ☐ **Show Floor.** Select this option to show the floor.

Use the Advanced tab for 3D charts to modify additional properties for 3D frames.

The Advanced tab contains the following options:

- ☐ **Viewing Angles.** Select from a drop-down menu of viewing angles for three-dimensional charts. For example, Standard or Group View.
- ☐ **Isometric Projection.** Select this option to ignore perspective distortion in a project graph cube from an isometric view.

- ☐ **Proportional Cube.** Select this option to define the axis size proportional to the number of series or groups.
- ☐ **Automatic shading of walls.** Select this option to shade chart walls.
- ☐ **Automatically Shade Frame Edge.** Select this option to automatically shade the frame edge.
- ☐ **3D Zoom Factor.** Enter a value in the text box to set the global scaling factor for zooming in and out in a 3D chart. Smaller values zoom out and produce a smaller display of the chart within a frame. Larger values zoom in and produce a larger display of the chart within a frame.
- ☐ **Pan Horizontally.** Enter a value in the text box to pan a 3D chart in the horizontal direction. Smaller values move the frame of the chart to the left. Larger values move the frame of the chart to the right.
- ☐ **Pan Vertically.** Enter a value in the text box to pan a 3D chart in the vertical direction. Smaller values move the frame of the chart upward. Larger values move the frame of the chart downward.

Use the Background tab to set and customize a border for a chart.

The Background tab contains the following options:

- ☐ **Show Border Color.** Select this option to show the color of the border.
- ☐ **Border Color.** Click this icon to open the Color dialog box, where you can select a color for the border.
- ☐ **Solid fill.** Select this option to display the Color and Transparency options.
 - ☐ **Color.** Click this icon to open the Color dialog box, where you can select a color for the frame.
 - ☐ **Transparency.** Move the slider to make the background opaque (0%) or transparent (100%). The default is 0%.
- ☐ **Gradient fill.** Select this option to display the direction of the gradient, the color pattern of the gradient, and the degrees of transparency for the two colors that make up the gradient. A gradient is a smooth color transition or blending of one color to another. The number of colors to use in a gradient is defined by the *stop* or *pin* elements.
- ☐ **Direction.** Select from this drop-down menu to set the direction of the gradient fill. For example, Gradient right or Radial.

Gradient Style

- ☐ **Color Pattern.** Select the color pattern for the data series. The color pattern option on the left is an AB wash that uses two colors in the pattern color1 - color2, for example, red-green. The color pattern option on the right is an ABA wash that uses two colors in the pattern color1 - color2 - color1, for example, red-green-red.
- ☐ **First Color.** Click this icon to open the Color dialog box, where you can select a color for the first color.
- ☐ **Second Color.** Click this icon to open the Color dialog box, where you can select a color for the second color.

For instructions on how to open this dialog box, see the procedures in [Using Frame and Background Properties](#) on page 80.

Frame and Background Shortcut Menu

When you right-click a chart background, a menu of options opens. The options for the background and frame elements are described in the following table.

Element	Option	Description
Background	Background Color	Enables you to specify the color of the background, using the Color dialog box. For instructions, How to Change the Color of the Background on page 81.
	Show legend	Controls the display of the legend on the background. When selected, it displays the legend. When cleared, it suppresses the display of the legend.
	More Frame and Background Options	Opens the Frame & Background dialog box. For more information, see Frame & Background Dialog Box on page 73.

Element	Option	Description
Frame	Frame Color	Enables you to specify the color of the frame, using the Color dialog box. For more information, see Color Dialog Box on page 21.
	Show 3D	Controls the depth of the frame. The value On renders the frame in 3D depth. The value Off renders the frame in one dimension.
	More Frame and Background Options	Opens the Frame & Background dialog box. For more information, see Frame & Background Dialog Box on page 73.

Using Frame and Background Properties

The following sections contain procedures for customizing frame and background properties. The options for the following procedures are found in the Features group of the Format tab.

Procedure: How to Change the Color of the Frame

The default color of the frame in a chart is determined by the Document Theme selected on the Options window. For more information, see *Changing InfoAssist+ User Preferences*.

This procedure describes how to change the color of the frame.

1. Create a chart or visualization.
2. Access the Frame & Background dialog box in one of the following ways:
 - ☐ **Ribbon:** On the *Format* tab, in the *Features* group, click *Frame & Background*.
 - ☐ **Shortcut Menu:** Right-click the chart, and click *More Frame & Background Options*.

The Frame & Background dialog box opens.

3. On the Frame tab, in the Fill area, click the *Color* icon.

Note: Solid fill must be selected for the Color icon to appear.

The Color dialog box opens. Select a new color for the frame. For more information on the Color dialog box, see [Color Dialog Box](#) on page 21. You can also set the depth angle and depth radius for the frame, as well as set a shadow for the frame.

4. Click *OK*.

The chart displays the new frame color.

Procedure: How to Change the Color of the Background

The default color of the background of a chart is determined by the Document Theme selected on the Options window. For more information, see *Changing InfoAssist+ User Preferences*.

1. Create a chart or visualization.
2. Open the Frame & Background dialog box in one of the following ways:

☐ **Ribbon:** On the *Format* tab, in the *Features* group, click *Frame & Background*.

☐ **Shortcut Menu:** Right-click the background of the chart, and click *Background Color*.

The Frame & Background dialog box opens.

3. On the Background tab, in the Fill area, click the *Color* icon.

The Color dialog box opens. Select a new color for the background. For more information on the Color dialog box, see [Color Dialog Box](#) on page 21.

4. Click *OK*.

The chart displays the new background color.

Formatting a Gauge Chart

A gauge chart is a circular chart that indicates the current position of a single data value within a given spectrum.

You can change the appearance of a gauge chart by using the gauge chart options found on the Format Gauge dialog box. To access the Format Gauge dialog box, on the *Format* tab, in the *Features* group, click *Gauges*.

Format Gauge Dialog Box

Whether you access gauge options from the ribbon, or the shortcut menu, you are presented with the Format Gauge dialog box of options for formatting a gauge chart. Such options include setting and styling a title for the gauge chart, setting tick marks, enabling and styling color bands, as well as setting advanced options, such as the gauge start and stop angle.

The Format Gauge dialog box contains the following tabs:

☐ General Options

☐ Axis Scale & Labels

- ☐ Tick Marks
- ☐ Bands
- ☐ Advanced

Use the General Options tab to set general gauge options.

The General Options tab contains the following options:

- ☐ **Gauges per row.** Enter or select how many gauges appear on each row. The default setting displays two gauge charts. A maximum of 32 gauge charts can appear on each row.

Note: The number of charts displayed per row can differ, based on the output format selected. For example, HTML format will display two charts per row, and HTML5 will display three.

Gauge Needle

- ☐ **Style.** Select a style from a drop-down menu of options to be applied to the gauge needle. For example, Pencil.
- ☐ **Color.** Click this icon to open the Color dialog box, where you can select a color for the gauge needle.

Note: If you are working with a gauge chart with more than one series, then you use the Format Series dialog box to format the color of the gauge needle and its border.

- ☐ **Border Color.** Click this icon to open the Color dialog box, where you can select a color for the gauge needle border.

Note: If you are working with a gauge chart with more than one series, then you use the Format Series dialog box to format the color of the gauge needle and its border.

Gauge Title

- ☐ **Show title.** (Default) Displays a gauge title appear for each gauge. Clear this option to suppress the title.
- ☐ **Position.** Select a position for the gauge title. Above is the default value.
- ☐ **Style.** Click this icon to open the Style dialog box, where you can style text.

Gauge value

- ☐ **Show value.** (Default) Clear this option to suppress the gauge value.
- ☐ **Style.** Click this icon to open the Style dialog box, where you can style text.

- ☐ **Format Value.** Contains a list of preset formats that can be applied.
- ☐ **Custom Format.** Allows you to use a custom format. This option is activated when *Use Pattern /100* and *Use Pattern* are selected as the format labels.

Use the Axis Scale & Labels tab to set the axis scale and label properties for the gauge needle.

The Axis Scale & Labels tab contains the following options:

Scale

- ☐ **Automatic Minimum.** (Default) Sets the engine to automatically supply the minimum value on the scale. Clear this option to manually set the minimum value by entering a number into the Value text box.
- ☐ **Value.** Enter the minimum value in this text box if you have not selected Automatic Minimum.
- ☐ **Automatic Maximum.** (Default) Sets the engine to automatically supply the maximum value on the scale. Clear this option to manually set the maximum value by entering a number into the Value text box.
- ☐ **Value.** Enter the maximum value in this text box if you have not selected Automatic Maximum.

Labels

- ☐ **Show Labels.** (Default) Displays labels next to the axis. Clear this option to suppress labels.
- ☐ **Style Labels.** Click this icon to opens the Style dialog box, where you can style text.
- ☐ **Format Labels.** Select from a drop-down menu of present formats that can be applied to the labels. When a custom format is selected, the format must be defined using a custom format pattern. For a list and description of the characters that you can use in a custom format, see the table in [Formatting Data Labels](#) on page 42.
- ☐ **Custom Format.** Text field to enter the custom format that you want to use.

The Tick Marks tab contains options to format tick marks on a gauge chart.

The Tick Marks tab contains the following options:

- ☐ **Automatic Grid Step.** (Default) Automatically calculates the number of major grid steps in a gauge chart. Clear this option to manually set the value by entering a number in the Value text box.

- ☐ **Value.** Enter the value in this text box if you have not selected Automatic Grid Step.
- ☐ **Tick Color.** Click this icon to open the Color dialog box, where you can select a color for the tick marks.
- ☐ **Tick Mark Length.** Enter a value for the relative length of major tick marks in a gauge chart. The valid range is from 0.0 to 0.5. If you set the smallest value, major tick marks do not appear.

The Bands tab contains options to format the color of the scale background on a gauge chart.

The Bands tab contains the following options:

- ☐ **Band 1.** Opens a drop-down menu of available bands.
 - ☐ **Add.** Adds the band selected from the drop-down menu of bands to the gauge chart. You can create up to five bands for a gauge chart.
 - ☐ **Remove.** Removes the band selected from the drop-down menu of bands to the gauge chart.
- ☐ **Minimum Value.** Enter a minimum value to a quality band in the gauge chart.
- ☐ **Maximum Value.** Enter a maximum value to a quality band in the gauge chart.
- ☐ **Border Color.** Opens the Color dialog box, where you can edit the color of the gauge band border.

Fill

- ☐ **No fill.** Removes fill from the quality band.
- ☐ **Solid fill.** (Default) Applies a solid color to the quality band.
- ☐ **Color.** Click this option to open the Color dialog box, where you can select the color for the quality band.
- ☐ **Transparency.** Move the slider to make the band opaque (0%) or transparent (100%). The default is 0%.

The Advanced tab contains options to set additional properties for the gauge needle.

The Advanced tab contains the following options:

- ☐ **Descending Axis.** Select this option to draw the gauge scale in descending order. When this option is cleared (default), the gauge scale is drawn in ascending order.
- ☐ **Show Zero Label.** Displays the zero label on the axis scale. Clear this option to start the gauge at another value. This option is selected by default.

- ☐ **Gauge Center by Quality.** Select this option to have the center of the gauge needle appear in the same the color as the band to which it is pointing.
- ☐ **Gauge Start Angle.** Enter a value to rotate the gauge start angle to a specified number of degrees. Values can range from 0 to 359 degrees. The default is 220 degrees.
- ☐ **Gauge Stop Angle.** Enter a value to rotate the gauge stop angle to a specified number of degrees. Values can range from 0 to 359 degrees. The default is 320 degrees. Setting a start angle to 0, and a stop angle to 180, creates a semi-circle.
- ☐ **Relative Inner Radius.** Enter a value to define the inner radius of the gauge bands and labels relative to the outer background of the gauge. Smaller values, such as 0.0, place the inner radius closer to the center of the gauge. A maximum value of 1.0, places the inner radius close to the gauge outline.
- ☐ **Relative Thickness.** Enter a value to define the relative thickness of the gauge bands. Values can range from 0.0 to 1.0.
- ☐ **Same Size Gauges.** This option applies to multi-category gauge charts. If you are working with three or more gauges per row, you can select this option to have the gauges display in the same size.

Gauge Elements Shortcut Menu

When you right-click a gauge chart, a menu containing the More Gauge Options becomes available. Select this option to open the Format Gauge dialog box. This is only available when using the HTML output format.

Using Gauge Properties

The following sections contain procedures for gauge properties. The Gauges option can be found on the *Format* tab, in the *Features* group.

Note: This option is only available when you are working with a gauge chart.

Procedure: How to Set the Number of Gauges Per Row

If you have multiple gauges on a chart, you might want to specify how many gauges appear on each row.

1. Create a gauge chart that has multiple values.
2. Open the Format Gauge dialog box in one of the following ways:
 - ☐ **Ribbon:** On the *Format* tab, in the *Features* group, click *Gauges*.

- ☐ **Shortcut Menu:** Right-click the gauge chart and select *More Gauge Options*.

The Format Gauge dialog box opens.

3. On the General options tab, in the Gauges per row field, enter or select the number of gauges that you want to appear on one row.
4. Click *OK*.

The gauges now appear on one row.

After changing the setting from the default of 2 gauges per row to 3 gauges per row, all the charts now appear on one row.

***Procedure:* How to Set the Minimum and Maximum Axis Scale Values**

1. Create a gauge chart.
2. Open the Format Gauge dialog box in one of the following ways:

- ☐ **Ribbon:** On the *Format* tab, in the *Features* group, click *Gauges*.

- ☐ **Shortcut Menu:** Right-click the gauge chart, and click *More Gauge Options*.

The Format Gauge dialog box opens.

3. On the Axis Scale & Labels tab, in the Scale area, either accept the minimum and maximum values for the scale automatically supplied by the chart engine, or enter your own in the *Value* fields.
4. Click *Apply*.

The gauge scale reflects the selections that you have made.

***Procedure:* How to Style Axis Labels**

1. Create a gauge chart.
2. Open the Style dialog box in one of the following ways:

- ☐ **Ribbon:** On the *Format* tab, in the *Features* group, click *Gauges* to open the Format Gauge dialog box. In the Format Gauge dialog box, open the Axis Scale & Labels tab. In the Labels area, click the *Style Labels* icon.

- ☐ **Shortcut Menu:** Right-click an axis label, and click *Style*.

The Style dialog box opens.

3. Select your styling options.
4. Click *OK*.

The scale labels reflect the style selections that you have made.

Procedure: How to Format Axis Labels

1. Create a gauge chart.
2. Access the menu of available format options for axis labels in one of the following ways:
 - ☐ **Ribbon:** On the *Format* tab, in the *Features* group, click *Gauges* to open the Format Gauge dialog box. In the Format Gauge dialog box, open the Axis Scale & Labels tab. In the Labels area, open the *Format Labels* drop-down menu.
 - ☐ **Shortcut Menu:** Right-click an axis label, and point to *Format*.

The menu of available format options opens.
3. Select your format option.

Note: If you select a custom format (for example, User Pattern, or Use Pattern /100), from the Format Labels menu on the Format Gauge dialog box, the Custom Format menu becomes available. When you select a custom format, it must be defined using a custom format pattern. For a list and description of the characters that you can use in a custom format, see the table in [Formatting Data Labels](#) on page 42.

4. Click *OK*.

The scale labels reflect the format selection that you have made.

Procedure: How to Rotate Axis Labels

1. Create a gauge chart.
2. Right-click an axis label.
3. On the shortcut menu, point to *Rotate*, then select the degree to which you want the labels rotated.

Procedure: How to Set Gauge Tick Marks

This procedure describes how to set the grid step, tick color, and tick length for the major and minor tick marks.

1. Create a gauge chart.
2. Open the Format Gauge dialog box in one of the following ways:
 - ☐ **Ribbon:** On the *Format* tab, in the *Features* group, click *Gauges*.
 - ☐ **Shortcut Menu:** Right-click the gauge chart and select *More Gauge Options*.

The Format Gauge dialog box opens.

3. On the *Tick Marks* tab, for the *Automatic Grid Step*, either accept the value automatically supplied by the chart engine, or enter your own, in the *Value* fields.
4. Click the *Tick Color* icon, to open the Color dialog box, where you can select a color for the tick mark.
5. For the *Tick Mark Length*, either accept the value automatically supplied by the chart engine, or enter your own, in the *Value* fields.

Procedure: How to Set Gauge Color Bands

1. Create a gauge chart.
2. Open the Format Gauge dialog box in one of the following ways:

☐ **Ribbon:** On the *Format* tab, in the *Features* group, click *Gauges*.

☐ **Shortcut Menu:** Right-click the gauge chart, and click *More Gauge Options*.

The Format Gauge dialog box opens.

3. Set the minimum and maximum value for each band that you want to appear on the gauge chart.
4. Set the color of the fill and border for each color band.

Note: The gradient fill option is not available for color bands.

5. Click *OK* to close the Format Gauge dialog box.

The bands are formatted accordingly.

Procedure: How to Match Needle Center Color to Band Color (Gauge Center by Quality)

This option matches the needle center color to the color of the band that the needle is pointing to.

1. Create a gauge chart.
2. On the *Format* tab, in the *Features* group, click *Gauges*.

The Format Gauge dialog box opens.

3. On the *Bands* tab, set the minimum and maximum value for each band that you want to appear on the gauge chart
4. Set the color of the fill and border for each color band.

Note: The gradient fill and transparency options are not available for gauge needles.

5. On the *Advanced* tab, select *Gauge Center by Quality*.

Note: This option displays in HTML, but not in HTML5.

6. Click *OK* to close the Format Gauge dialog box.

The color of the center of the gauge needle now matches the color of the band.

Procedure: How to Style a Gauge Needle

This procedure explains how to change the gauge needle from the Normal style to the Pencil style.

1. Create a gauge chart.
2. Open the Format Gauge dialog box in one of the following ways:
 - ☐ **Ribbon:** On the *Format* tab, in the *Features* group, click *Gauges*.
 - ☐ **Shortcut Menu:** Right-click the gauge chart, and click *More Gauge Options*.
3. The Format Gauges dialog box opens.
4. In the General Options tab, in the Gauge Needle section, from the Style drop-down menu, select *Pencil*.
5. Click *OK*.

The gauge needle changes to a pencil.

Procedure: How to Set Gauge Needle Colors in a Multi Series Gauge Chart

You cannot change the fill color and border color of the needles in a multi-series gauge chart through the General Options tab of the Format Gauge dialog box. You can do so through the Format Series dialog box. However, you can still use the General Options tab to change the style of the needle.

1. Create a gauge chart with more than one measure field.
2. On the *Series* tab, from the Series drop-down menu, select the series that you want to style.
3. In the Properties group, click *Style*.
The Format Series dialog box opens.
4. On the Fill tab, select the fill and color options for the gauge needle for the selected series.
5. On the Border tab, select the *Show Border Color* option, if you want the gauge needle to have a border. You can select the color for the border, as well.
6. Click *Apply*.

7. Repeat steps 2 through 5 for each series gauge needle that you want to style.
8. When you are finished, click *OK* to close the Format Series dialog box.

The color of the gauge needles and their borders changes accordingly.

Formatting Page Headings and Page Footings

Page headings and page footings supply context and key information about a chart, such as its purpose, audience, and author. Page headings and page footings also enhance visual appeal.

Procedure: How to Add a Page Heading and Page Footing to a Chart

The procedure uses sample values, but you can supply values that apply to your own charts.

This feature is available in Query Design view, Live Preview, and Document view.

1. Create a chart or visualization.
2. On the *Home* tab, in the *Report* group, click *Header & Footer*.

The Header & Footer dialog box opens.

Tip: Another way to access the Heading & Footing dialog box is to click the arrow next to the Header & Footer button. Doing so opens a drop-down menu from which you can select the heading or footing that you want to work with. After you make your selection, the Header & Footer dialog box opens, and the heading or footing that you selected is active.

3. Click the tab for the page heading or page footing, depending on which you want to add.

By default, the Page Heading tab is selected. In this procedure, accept the default to add a page heading first.

4. Click inside the design area of the dialog box, and type the text for the page heading.

For example, the text for a sample page heading might be *Customers By Occupation*.

5. Using the styling options, apply styling to the page heading text.

For example, 14 pt. bold Helvetica with center alignment.

6. Click *Apply* to save the changes that you have made, without closing the dialog box.

7. To add a page footing, click the *Page Footer* tab.

For this procedure, you are going to add one of the supplied quick text options, followed by some text of your own.

8. Click the down arrow next to the preformatted text button, and click *Created by* from the drop-down list.

9. Complete the text by typing the applicable value within the supplied text, for example, *Sales Manager*.

10. Change the styling as you want.
11. Click *OK* to save the page heading and page footing and close the Header & Footer dialog box.

The chart contains the page heading and page footing that you added and styled.

The following image shows a chart with a styled header and footer.

12. To make changes to either the page heading or page footing, return to Design view. Right-click the header or footer, and click *Edit* from the drop-down menu.

Procedure: How to Control the Rendering of a Page Heading and Page Footing

You can control the way in which a page heading and page footing are rendered on a chart at run time.

1. Create a chart or visualization.
2. Open the Header & Footer dialog box, as described in [How to Add a Page Heading and Page Footing to a Chart](#) on page 90.
3. Click the *Text options for chart* button .

A drop-down menu, with two options for rendering the page heading and page footing, opens.

Tip: Your selection for a page heading also applies to a page footing, and vice versa.

- ☐ Create Header and Footer as text renders the heading and footing as text elements that are separate from the chart image.
- ☐ Embed Header and Footer in the chart renders the heading and footing text as part of the chart image. This is the default value.

4. Click *OK* to save your selection and close the Heading & Footing dialog box.

Using Additional Formatting Features

This section describes additional formatting features that are available for charts.

Procedure: How to Set 3D Depth on a Bar Chart

You can apply a 3D-effect to a 2D-chart.

Note: If you find that the depth of the 3D effect makes it difficult to distinguish the values on the Y-axis scale, then you can turn this option off. This procedure explains how to set the 3D effect for a default vertical bar chart.

The following image shows a bar chart before the 3D effect is applied.

1. Create a 2D chart.

2. In Live Preview, apply the 3D effect in one of the following ways:

- ☐ **Ribbon:** On the *Format* tab, in the *Features* group, click *3D Effect*.
- ☐ **Shortcut Menu:** Right-click the frame of the chart, point to *Show 3D*, and click *On*.

The 3D effect is applied to the chart, as shown in the following image.

Procedure: How to Rotate a Chart

You can rotate bar, line, and area charts to change the orientation of the data.

1. Create a chart or visualization.
2. On the *Format* tab, in the *Features* group, click *Rotate*.

The chart is rotated 90 degrees clockwise.

Procedure: How to Display a Static Reference Line

Reference lines draw attention to specific data locations on a chart. You can add up to three horizontal (X axis) and three vertical (Y axis) reference lines to a chart.

Reference lines can be created using either a constant or a computed field.

Field values allow a property to be dynamic, so that the reference line can change position dynamically on the chart depending on the value of the field that is assigned to it.

Note: A reference line value should be a single value, such as 10K, for example. In the Reference line dialog box, if you select a field with multiple values, (Quantity Sold, for example), then InfoAssist+ plots the last value on the chart.

1. Create a chart or visualization.
2. On the *Format* tab, in the *Features* group, click *Reference*.
3. In the drop-down menu that opens, select one of the following:

☐ Add Reference Line to Y-Axis

☐ Add Reference Line to X-Axis

The Reference Line dialog box opens.

4. Create the reference line with a static value that you set.
 - a. Select the *Value* option.
 - b. In the *Value* text field, type the value that you want to distinguish with the reference line.
5. In the *Text* field, type the text for the reference line.
6. In the *Position* drop-down menu, select the position for the reference line on the chart. For example, *Above Center*.
7. Click the *Style* button to set the style for the reference line. For example, *Solid*.
8. Click the *Color* button to open the *Color* dialog box, where you can select a color for the reference line and the text.
9. Click the *Weight* button to select the weight of the reference line. For example, *1px - Light*.
10. Click *OK* to save the options that you have selected, and close the *Reference Line* dialog box.

The reference line is added to the chart.

Procedure: How to Display a Dynamic Reference Line

Reference lines can be created using either a constant or a computed field.

Field values allows a property to be dynamic, so that the reference line can change position dynamically on the chart depending on the value of the field that is assigned to it.

Note: A reference line value should be a single value, such as 10K, for example. In the Reference line dialog box, if you select a field with multiple values, (Quantity Sold, for example), then InfoAssist+ plots the last value on the chart.

The following procedure provides an example of how to create a dynamic reference line, where the value changes based on the date. In this example, you can track the number of estimated delivery days per shipping company, where the number of days estimated for delivery are based on whether or not the sale date is a holiday.

1. Create a COMPUTE field to calculate the Reference Line.
 - a. On the *Data* tab, in the *Calculation* group, click *Summary (Compute)*.
The Summary Field (COMPUTE) dialog box opens.
 - b. In the Field text box, enter *Reference*.
 - c. Set the format to *D12.2*.
 - d. Enter *IF WF_RETAIL_LITE.WF_RETAIL_TIME_SALES.TIME_HOL EQ 'Y' THEN 5 ELSE 2* into the expression.
 - e. Click *OK* to close the dialog box.
2. Hide the *Reference* field from the chart.
3. Add a dynamic reference line.
 - a. On the *Format* tab, in the *Features* group, click *Reference*.
 - b. From the drop-down menu, select *Add Reference Line to Y-Axis*.
The Reference Line dialog box opens.
 - c. Select the *Field* option.
 - d. From the Field drop-down menu, select *Reference*.
 - e. In the Text field, enter *Acceptable*.
 - f. From the Weight drop-down menu, select *2px - Medium*.
 - g. From the Position drop-down menu, select *Above Left*.
 - h. Optionally, you can change the color and style of the Reference line.
 - i. Click *OK* to close the Reference Line dialog box.
4. Run the chart.
Auto Prompt appears.
 - a. Select *20100101* (January 1, 2010) and click *Run* to see that five days are acceptable since the date is a holiday.
 - b. Select *20100202* (January 2, 2010) and click *Run* again to see that two days are acceptable since the date is not a holiday.
5. Click *Save*.

Procedure: How to Display Annotations

Annotations are explanatory notes or comments. You can add up to eight annotations on a chart.

1. Create a chart or visualization.
2. On the *Format* tab, in the *Features* group, click *Annotate*.
3. In the drop-down menu that opens, click *Add an annotation*.

The Annotation dialog box opens.

4. In the text input field, type the text for the annotation.
5. In the Position drop-down menu, select the position for the annotation on the chart. For example, Top Left.
6. Click *OK* to save the options that you selected, and close the Annotation dialog box.

The annotation is added to the chart.

7. Click *Run* to generate the report.

Collation in Charts

Charts that have the new attribute syntax respect collation, which provides alphabetical sorting. Collation is also used in other areas, such as filtering.

Collation is set to *CODEPAGE* by the WebFOCUS Business User Edition installation, by default. This can be changed in the Custom Settings section of the Administration Console. For more information, see *Configure Collation Sequence Settings*.

Using Storyboards

The Storyboard feature allows you to capture and preserve snapshots of your visualizations as you create them.

Each time you add something to the storyboard, it is placed onto a unique PowerPoint slide. When you click *Show*, you can open and review your slides in PowerPoint.

Since storyboards give you the ability to turn your visualizations into a PowerPoint presentation, you can modify your storyboard to create a customized demo. For example, you can rearrange or delete slides, or add titles and text.

You can also make your visualization portable by saving the PowerPoint files that you create and sharing the slides through email or other electronic distribution.

Procedure: How to Create a Storyboard

1. Create a visual, for example, a bar chart or a grid.
2. On the *Home* tab, in the *Storyboard* group, click *Add*.

Note: When you receive the *Added to Storyboard* message, click *OK*.

3. Insert another visual. On the *Home* tab, in the *Visual* group, click *Insert*.

Note: You can also click the down-arrow on the *Insert* button to insert a chart, grid, or text.

4. On the *Home* tab, in the *Storyboard* group, click *Add*.

Repeat steps 2 through 4 until you complete your data analysis.

5. On the *Home* tab, in the *Storyboard* group, click *Show*.

A new browser window opens, and you are prompted to open or save the PowerPoint file that contains your storyboard.

- ☐ If you click *Open*, the storyboard opens in PowerPoint. You can save the file as a PowerPoint presentation on your machine.
- ☐ If you click *Save*, the storyboard will be saved to a PowerPoint (.pptx) file and placed in the Downloads folder on your machine. Click the down arrow on the right side of the *Save* button to perform a *Save as*. This allows you to specify the drive and directory to which the file will be saved.

In PowerPoint, each storyboard frame displays as a PowerPoint slide, as shown in the following image.

Animating Visualizations

You can animate visuals in a visualization. Each individual visual can have different animation settings. The animations for each visual execute when you run the visualization.

Procedure: How to Add Animation to a Visual

1. Create a visualization with one or more visuals.
2. Select the visual that you want to animate.
3. On the *Format* tab, in the *Interactive* group, click *Interactive Options*.
4. On the Interactive Options dialog box, select the *Show Animation* check box.

This animates the visual.

5. Set the duration for the animation, which determines the speed at which the animation occurs. The default value is 1400ms. Increase the value to make the animation slower, and decrease the value to make it faster.
6. Optionally, clear the *Enable Hover Over Effect* check box.

This option lightens or adds a border to the segment of the visual that you move your mouse over.

7. Click *OK*.

8. Click *Run*.

Your visual animates automatically based on the options that you specified.

Using Filters to Customize the Display of Data

Filters enable you to customize the display of data in your report, chart, document, or visualization. This gives you the advantage of viewing only the data that you want to see and use.

When creating a report, you refer to fields in several parts of the request. For example, in display commands (PRINT, SUM), in sort phrases (BY, ACROSS), and in selection criteria (WHERE, WHERE TOTAL, IF).

Note: When using ESSBASE hierarchical data sources, creating a filter on a sort field is not supported.

The WHERE phrase selects records from the data source to be included in a report. The data is evaluated according to the selection criteria before it is retrieved from the data source. You can use as many WHERE phrases as necessary to define your selection criteria.

In WHERE TOTAL tests, however, data is selected after all the data has been retrieved and processed.

You can group conditions and expressions within filter criteria. In addition, you can apply functions and calculations within criteria. For more information on filtering options, see *Field Tab*.

You can create Where and Where Total filters in the Filter dialog box by clicking *WHERE*.

Double-clicking the *Double-click or press F2 to edit!* text opens drop-down menus for Fields and Subqueries, Operators, and Values.

You can retrieve fields and values from the Master File and data source and Subqueries from a HOLD file.

The Field drop-down menu provides a field list from the Master File. The Field list can be viewed as follows:

- ☐ In business order (default)
- ☐ In a sortable grid

- ☐ In a hierarchical structure of the data
- ☐ If you select Subquery, then the Operator drop-down menu is replaced by a menu with the options of *In list* and *Not in list*.
 - ☐ **In list.** Activates a drop-down menu in the right-most part of the expression. The drop-down menu contains a list of all subqueries that you have created from the Master file in use, and an EXISTING option.

Click *EXISTING* to open the Open dialog box, where you can select a subquery from a different Master file.

- ☐ **Not in list.** Opens the Open dialog box, where you can select a subquery from a different Master file.

The Operator (default) drop-down menu provides various operators for your filter. For example, Equal to.

The Value drop-down menu opens a dialog box with multiple options.

Note: If you are creating a filter on a full date field, the Value field will have a calendar icon adjacent to it. You can use this icon to select a date using a calendar control.

The Type drop-down menu contains the following options:

- ☐ **Constant.** Enables the entry of a literal constant value.
- ☐ **Parameter.** Enables you to specify a parameter by entering a name and description in the provided text input areas, as well as selecting the type of parameter (Simple, Static, Dynamic, or Optional).
- ☐ **Field.** Enables the specification of a field name to compare against.

The value area generally contains a text input box that you can use to manually insert values. However, if you are working with a date field, the Value field is set to Today. You can optionally select Beginning of Month, End of Month, Beginning of Quarter, End of Quarter, Beginning of Year, End of Year, or you can specify a Custom date using the calendar that displays when you make that selection.

Note: The default date of Today applies to Report, Chart, and Document modes only.

The value area also contains a Get Values drop-down menu, which supplies the following options:

- ☐ **All.** Retrieves all the values from the selected field.
- ☐ **First.** Retrieves the first value from the selected field.

- ☐ **Last.** Retrieves the last value from the selected field.
- ☐ **Minimum.** Retrieves the minimum value from the selected field.
- ☐ **Maximum.** Retrieves the maximum value from the selected field.
- ☐ **From File.** Retrieves a value that you specify. Selecting this option opens the Select From File dialog box, where you can browse to a local file and specify a file format, such as a flat file (CSV) or an Excel spreadsheet (XLS or XLSX).

Note: The Get Values drop-down menu is only accessible if you have already selected a field.

After selecting the values that you want, you can move them into and out of the Multiple Values area with the left and right arrows. You can also change the value order and delete values with the up and down arrows and the Delete icon.

After creating a condition, you can insert additional conditions before and after the selected condition by using the *Insert Before* and *Insert After* buttons at the top of the Filter dialog box. You can use either the *And* or the *Or* conjunction to link conditions and the *Group* and *Ungroup* buttons to nest and organize conditions.

You can create additional filters by clicking the *New Filter* button at the top of the Filter dialog box.

After creating the filters that you want, click *OK* to save and apply the filters. You can access them from the Filter pane of the Resources panel.

Note: Dates shown in the live preview reflect the format specified in the data source. However, when Filters are applied to a date formatted field, the format of dates shown in the Filter interface is derived from the locale. When the report, chart or visualization is executed, the output as well as any prompt will reflect the format specified in the data source.

Including or Excluding a Filter

Once you have created a filter, you can make decisions about when and where you want to include it in your report. For example, you might want to include one filter and exclude another. Using the Include and Exclude options in the Filter group on the Home or Field tabs, you can set filters accordingly.

You can use the following information to make decisions about your filters:

- ☐ **Exclude.** Removes, but does not delete, the filter from the report.
- ☐ **Include.** Restores a filter that was previously excluded from a report.

Using the Prompt Functionality to Select Field Information at Run Time

Using the prompt functionality, you can create an auto prompting parameter for which you can define a value at run time. This feature is located in the Filter Group on the Field tab.

To create an auto prompting parameter:

1. Select a field for which you want to create a parameter in your report.
2. On the Field tab, in the Filter group, click *Prompt*.

The Create a filtering condition dialog box displays.

3. Double-click the *Value* field.

Note: Parameter is selected, by default, when you are defining a prompt.

The following options display, from which you can make a selection:

- ☐ **Simple.** This is used for prompts using Text Input. This is the default value.
 - ☐ **Static.** This is used for prompts using Selection. This option allows you to select multiple values at run time.
 - ☐ **Dynamic.** This is used for prompts using Data Values. This option allows you to select multiple values at run time.
 - ☐ **Optional.** This is used for prompts using Single or Multiselect parameters.
4. Click *OK*, and click *OK* again to close the Create a filtering dialog box.

When you run your report, you will be prompted for information based on the parameters you created.

Using Auto Drill

Auto Drill enables you to navigate through different levels within the dimension hierarchy of your data source. This allows you to review underlying data for a particular area, and move through the structure of your data source based on your informational needs.

In order to use Auto Drill, you must enable it by clicking the Auto Drill button on the Format tab, in the Auto Drill group.

Once you have enabled Auto Drill, you can develop your report or chart and run it to activate the hyperlinks that Auto Drill creates. This enables you to navigate up or down through the related hierarchy of your data source by clicking the links that display.

When you click a hyperlink, the option to drill up or drill down displays, depending on where you are in the hierarchy of your data. You can then select one of these options to begin navigating your data. For example, if you have Product Category in your hierarchy, you would be able to drill down to Product SubCategory. When you drill down, you can subsequently drill back up to the originating dimension sort field. If you have selected a data source that has multiple levels and your report or chart uses a component in the middle of the hierarchy, both the Drill up and Drill down options will display. Once you have started navigating your data using the Drill up and Drill down options, the Restore Original option displays, enabling you to start your data analysis over by re-executing the original Auto Drill request.

At run-time, the Auto Drill functionality displays a breadcrumb header. This defines your current location in the hierarchy of your data source and enables you to navigate back and forth between different levels in your data.

Important:

- ☐ The Auto Drill functionality is only available for data sources that have a dimension hierarchy.
- ☐ If you have Auto Drill enabled and you attempt to run your report or chart in deferred mode, the hyperlinks will not display. This is also true for Auto Drill enabled reports that are distributed through ReportCaster.
- ☐ With the exception of Visualization mode, Auto Drill is available at run-time, but not in Live Preview.
- ☐ Auto Drill is supported for HTML and active report output format reports.
- ☐ Auto Drill is automatically enabled in Visualization mode for data sources that have a dimension hierarchy.
- ☐ Auto Drill functionality is not available in reports distributed by ReportCaster, because Auto Drill uses live data, in an interactive session, for data drilling. Data values and totals may not be the same if the data has changed since the last distribution. Mixing past data with current data could impact data analysis.
- ☐ Auto Drill is not supported for HTML5 output format charts that do not support the new chart attributes syntax.
- ☐ Auto Drill is not supported on Across fields in active reports.
- ☐ You must use dimension fields as a sorting field, either BY or ACROSS.

Procedure: How to Use Auto Drill to Navigate the Hierarchy of Your Data Source

1. Select a data source that has a dimension hierarchy. For example, wf_retail_lite.mas.
2. Create a report or chart with one or more hierarchical fields (for example, Product,Category).
3. On the *Format* tab, in the *Auto Drill* group, click *Auto Drill*.
4. Click *Run*.

The report or chart displays.

5. For reports, click a hyperlinked field within your report. For charts, hover over a chart aspect (for example, a bar).

A menu appears.

6. Select a hierarchical value to which to drill down to.

Once you have drilled down on a field, you can subsequently drill up.

7. To return to the default state of the report or chart, click a hyperlink or hover over a chart aspect, and then click *Restore Original*.

Using the Auto Linking Feature to Link Content

Auto Linking makes it easy to connect reports and charts in your development environment, expanding the reporting capabilities of your organization. Using Auto Linking, you can dynamically link HTML reports, active reports, and HTML5 charts with a single report or chart of any format, based on their common sort (BY) fields and parameters referenced in any filters. It is this commonality that dynamically links content in your WebFOCUS repository, allowing you to discover new possibilities in your data, and explore new relationships within your reporting enterprise. In addition, Auto Linking saves development time and effort, because drilldowns do not need to be manually created and maintained.

To use Auto Linking, you must use the Enable Auto Linking option in InfoAssist+ to set the reports or charts that can be auto-linked. In addition, you must also set reports or charts to be Auto Link targets. The options to enable and disable Auto Linking and Auto Link Target functionality are available on the Format tab, in the Auto Linking group, in InfoAssist+.

Note:

- ☐ The Auto Link Enabled option is activated only when the HTML, HTML5, and active report output format is selected.
- ☐ You can open an existing report or chart and enable Auto Linking or set the item as an Auto Link target.

When Auto Link functionality is activated, your reports or charts display a link for each sort (BY) field with qualifying target reports or charts at run time. In Auto Link enabled reports, you must add sort (BY) fields in the BY field container. In Auto Link enabled charts, you can add sort (BY) fields to the Horizontal Axis, Vertical Axis, or Color field containers.

To qualify a report or chart as an Auto Link target, you must include filters that contain the parameters that you selected as the sort field or fields in the enabled report or chart. The parameter names defined in these filters must be the same as the sort (BY) field names in the Auto Link enabled report. When you select a report or chart as the Auto Link Target, it specifies that the parameter information should be catalogued, and will be evaluated when an Auto Link enabled report or chart is run.

For an Auto Link enabled report at run time, the qualifying target reports and charts are those that have filters with parameters for the selected sort field and the sort fields that precede it, which appear to the left. For an Auto Link enabled chart at run time, the target reports and charts are those that have filters with parameters for all sort fields. For run time for both reports and charts, the linked sort field values in the Auto Link enabled report or chart are passed to the Auto Link target report so that it can be filtered by the sort (BY) field values.

For example, you may have an Auto Link enabled report that contains sort (BY) fields Product Category and Model, with a measure (Sum) field, Revenue. To qualify as an Auto Link target, other reports or charts in your repository can contain a single filter with a parameter for Product Category, or two filters with parameters for both Product Category and Model. When you run the Auto Link enabled report, the Product Category field will link to target reports or charts that have a filter with a parameter for Product Category and the Model field will link to target reports or charts that have filters for both Product Category and Model.

If you use the same example for an Auto Link enabled chart instead of a report, you can access the target reports or charts from a tooltip option that displays when you point your mouse over an area of the chart, such as a bar that represents Revenue by Product Category and by Model.

Note:

- ☐ The linked reports displayed are limited to those that you are authorized to run or run deferred.
- ☐ When running an HTML report with On-demand Paging enabled, the qualifying Auto Link targets appear on the menu in the order that they are specified in the request. This is also true for a chart request that is a legacy graph format (PFJ-based formats, such as PNG and non-bucket HTML5). In reports, horizontal lines appear in the menu to separate user specified drilldowns and Auto Link navigation options.

- ☐ Consideration should be given to how many reports or charts are indicated as Auto Link targets, as the run time Multi-drill menu for the qualifying target reports may become long in length. In these cases, some browsers may display a script processing warning message.
- ☐ The Auto Link Enabled and an Auto Link Target options can be set individually or both can be set on the same report or chart if that item meets the Auto Linking requirements.

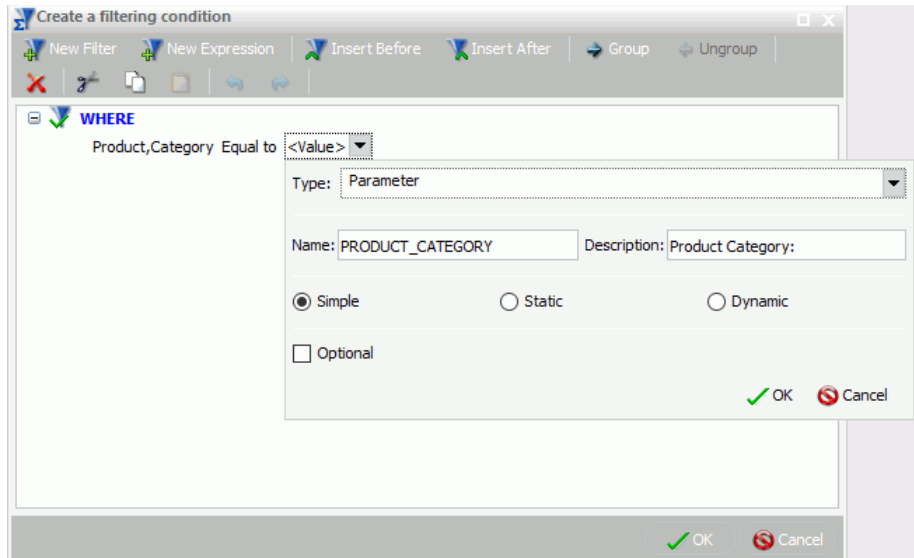

Procedure: How to Set an Existing Report or Chart as Auto Link Enabled

1. In the Resources tree, right-click a report or chart and click *Edit*.
InfoAssist+ opens in the relevant mode.
2. Verify that there is a sort (BY) field in the report or chart.
 - ☐ For reports, sort fields are added to the BY field container.
 - ☐ For charts, sort fields are added to the Horizontal, Vertical, or Color field containers.
3. On the *Format* tab, in the Auto Linking group, click *Enable Auto Linking*.
4. Save the report or chart.
Your existing report or chart is now Auto Link enabled.

Procedure: How to Set an Existing Report or Chart as an Auto Link Target

1. In the Resources tree, right-click a report or chart and click *Edit*.
InfoAssist+ opens in the relevant mode.
2. On the *Format* tab, in the Auto Linking group, click *Auto Link Target*.
Note: Selecting Auto Link Target specifies that the parameter information for this report or chart will be stored, adding it to the repository of reports and charts that will be evaluated when an Auto Link enabled report is run.
3. Add a filter with a simple or optional parameter to the target report or chart. Qualifying target reports are those that have filters with parameters for the sort (BY) fields in Auto Link enabled reports or charts.
 - a. From the Data pane, drag a sort (BY) field into the Filter pane.

- b. Using the Create a filtering condition dialog box, add the selected parameter as simple, as shown in the following image.

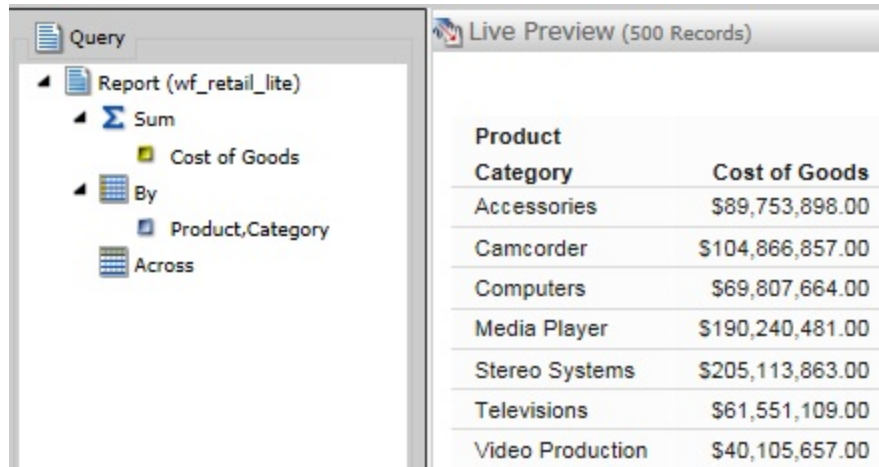

- c. Click *OK*, and then click *OK* again to exit the Create a filtering dialog box.
4. Save the report or chart.
Your existing report or chart is now set as an Auto Link target.

Procedure: How to Create a New Auto Link Enabled Report or Chart

1. Open InfoAssist+ in report or chart mode.
2. From the Open dialog box, select a data source.
3. On the *Format* tab, in the Auto Linking group, click *Enable Auto Linking*.
4. Add fields to the report or chart, ensuring that one is a sort (BY) field.
 - ☐ For reports, sort fields are added to the BY field container.

- ❑ For charts, sort fields are added to the Horizontal, Vertical, or Color field containers.

Product Category	Cost of Goods
Accessories	\$89,753,898.00
Camcorder	\$104,866,857.00
Computers	\$69,807,664.00
Media Player	\$190,240,481.00
Stereo Systems	\$205,113,863.00
Televisions	\$61,551,109.00
Video Production	\$40,105,657.00

5. Save the report or chart.

Your report or chart is now set as Auto Link Enabled.

Procedure: How to Create a New Auto Link Target Report or Chart

1. Open InfoAssist+ in report or chart mode.
2. From the Open dialog box, select a data source.
3. On the *Format* tab, in the Auto Linking group, click *Auto Link Target*.

Note: Selecting Auto Link Target specifies that the parameter information for this report or chart will be stored, adding it to the repository of reports that will be evaluated when an Auto Link enabled report is run.

4. Add fields to the report or chart.
5. Add a filter with a simple or optional parameter to the target report or chart.

- a. From the Data pane, drag a sort (BY) field into the Filter pane.
- b. Using the Create a filtering condition dialog box, add the selected parameter as simple or optional.

Note: When creating a parameter for a field, the parameter name defaults to the fieldname that you select. In the previous image, the creation of a filter with parameter Product Category is shown. To ensure that the name of the parameter is the same as the sort (BY) field in the Auto Link enabled report or chart, do not change the name of the parameter that is generated by your field selection.

- c. Click OK, and then click OK again to exit the Create a filtering dialog box.
 6. Save the report or chart.
- Your report or chart is stored as an Auto Link target.

Procedure: How to Run an Auto Link Enabled Report or Chart

You can run an Auto Link enabled report or chart from within InfoAssist or from the Portal.

1. Open and run an Auto Link enabled report or chart in one of the following ways:
 - ☐ In InfoAssist+, open or create an Auto Link enabled report and on the Quick Access toolbar, click *Run*.
 - ☐ From the Portal, right-click a report or chart that is Auto Link enabled and click *Run*.
2. Use the hyperlinks to link to other reports and charts, based on the following information:
 - ☐ **Reports.** Displays with hyperlinks on the sort (BY) fields that have qualifying target reports. Click a hyperlink to display the menu with the Auto Links option, which cascades to list the qualified Auto Link target reports and charts, as shown in the following image.

Product Category	Revenue	Quantity Sold	Cost of Goods	Gross Profit
Accessories	\$103,316,482.12	511,667	\$89,753,898.00	\$39,854,440.53
Camcorder	\$104,866,857.00	455,244	\$104,866,857.00	\$49,598,845.24
Computers	\$103,316,482.12	351,777	\$69,807,664.00	\$33,508,818.12
Media Player	\$246,073,059.36	771,934	\$190,240,481.00	\$55,832,578.36
Stereo Systems	\$291,294,933.52	1,114,332	\$205,113,863.00	\$86,181,070.52
Televisions	\$78,381,132.81	105,188	\$61,551,109.00	\$16,830,023.81
Video Production	\$58,053,276.62	199,749	\$40,105,657.00	\$17,947,619.62

- Charts.** Displays with aspects over which you can hover (for example, a bar) in the chart. A tooltip displays with the Auto Link target reports and charts, as shown in the following image.

Using Multi Drill

The Multi Drill functionality enables you to create multiple drill down links on a data field in a report or chart. This is useful when you want to define custom links to other reports or websites.

Using the Multi Drill functionality, you can define conditions for drilling down or through the data element that you select. Once drill down information is saved and you run the report or chart, the drill down options display when you click or hover over the defined area of a report or chart, respectively.

You can create drill down links by selecting a field in the Query pane. On the *Field* tab, in the *Links* group, click *Drill Down* to open the Drill Down dialog box. You can also right-click a field in the Query pane, and click *Drill Down*. The Drill Down dialog box is shown in the following image.

New Window

Parameters

Name	Value
------	-------

* Required Field

OK Delete all and exit Cancel

When you access the Drill Down dialog box, the name of the field that you selected displays in the title bar. This enables you to identify the current field and is useful when working with Drill Down parameters.

In the Drill Down dialog box, you can configure a hyperlink or drill-down procedure. When you run the report, you can click the link that is created, which would take you to the specified URL or execute the specified procedure.

You can also create multiple drilldowns for a selected field. The drill down links that you define display as separate entries in the drill down list, also known as the drill menu, at run-time. The display of these entries is based on the naming conventions that you applied when creating the multi-drill scenario.

Once your drilldown options are defined, you must run your report in order to access the drill down links that you have created. For reports, the links display when you click on a hyperlink for the data field that you selected. For charts, they display when you hover over an area of the chart for which the drill down has been defined (that is, the field that you selected when you defined the drill down).

These links enable you to drill directly through to an external procedure or URL.

For example, you can create one drill down link for an existing procedure, and another for a webpage. Both drill downs are stored for the underlying field that you selected. Once you define the first drill down, additional options display on the toolbar, as shown in the following image.

Note: You can rename a drill down using the Description field in the right pane of the Drill Down dialog box.

The following icons are available on the Drill Down dialog box toolbar:

- ☐ **Create a new drill down.** This option is enabled when all required information is provided for the first drill down. When you click *Create a new drill down*, a new drill down item is created. This switches the drill down functionality from a regular drill down to multi-drill. By default, the name of the drilldown is Drill Down n, where n is a consecutive integer, such as Drill Down 1, Drill Down 2, etc. This option is initially disabled, but is enabled after you have created at least one drill down link.
- ☐ **Duplicate the selected drill down.** When an existing drill down item is selected, clicking this option duplicates the item. A (Copy n) is appended to the name of the drill down, where n is the consecutive number assigned to the duplicated drill down. Once assigned, the name can subsequently be changed in the Description field. Consecutive copies can also be rearranged by dragging the drill down items into the desired order.

Note: The Duplicate button is only active when sufficient information is available for the selected drill down item.

- ☐ **Rename the selected drill down.** This option enables you to rename an existing drilldown and is active by default. When this option is selected, the Description field is selected, allowing you to provide a new name for the drill down link. You can enter a description up to 100 characters long. If you remove the description, the drilldown is renamed to the default name.
- ☐ **Remove the selected drill down.** If you have a drill down item selected, the Remove the selected drill down option is active. When you select this option, the current drilldown is deleted. If a drill down item is removed, the next drill down item is automatically selected. If you remove the last drill down item, the Drill Down dialog box resets to its initial state, restoring Drill Down 1 as the default value.
- ☐ **Options.** The Options functionality enables you to change the order of your drill down items. This allows you to control the order in which the items are presented in the drill menu when you run your report and click on a hyperlink. You can change the order by selecting a defined drill down in the list that is presented under Edit Order and then clicking the Move Up or Move Down button. You can also remove one or more drill down items from the list by selecting the desired items and then clicking the *Remove from List* button. If you multi-select your drill down items using the CTRL key, the Move Up and Move Down buttons are disabled.

Note: Move Up, Move Down, and Delete are also available as context menu options when you right-click a drill down item in the Edit Order list.

The Drill Down dialog box contains the following options for specifying drill down information for the selected field:

Note: When specifying parameters for your drill down, click *Add Parameter* to add them to your parameters list.

- ☐ **Report.** Select this option to choose a report for the current drill down. This option is selected by default.
 - ☐ **Report.** Enables you to browse to a stored report.
 - ☐ **Description.** Provides a field in which to describe the report. If you selected a report by browsing, this field is automatically populated with the title of the procedure or the name where procedure titles are not accessible. This field is also used to rename a specified drill down.
 - ☐ **Target.** Allows you to specify a target for the drill down. Options include: New Window, Same Window, or a value that you specify. The default value for report is New Window.
 - ☐ **Parameters.** Displays the parameters that you have indicated for the current drill down.
- ☐ **Refresh BI Portal.** Select this option to refresh the components of the BI Portal and pass parameters to them.
 - ☐ **Refresh.** Provides options by which to refresh the page. Options include Current Page and All Pages.
 - ☐ **Description.** Provides a field in which to describe the refresh process. This field is also used to rename a specified drill down.
 - ☐ **Target.** Reflects the target for the drill down. The only applicable value for Refresh BI Portal is Same Window.
 - ☐ **Parameters.** Displays the parameters that you have indicated for the current drill down.
- ☐ **Auto Link Target.** Select this option to create an explicit list of Auto Link targets. Upon selection, these will be available in the drill down menu at run time.

Note: When working with reports, the Auto Link Target drill down option is only available for a selected dimension (BY) field. For more information, see *Using the Auto Linking Feature to Link Content* .

 - ☐ **Auto Link Target.** Enables you to browse to a stored target report.
 - ☐ **Description.** Provides a field in which to describe the target report. If you originally selected a report by browsing, this field is automatically populated with the report title or the name where titles are not accessible. This field is also used to rename a specified drill down.

- ☐ **Target.** Enables you to specify a target for the drill down. Options include: New Window, Same Window, or a value that you specify. The default value for Auto Link Target is New Window.
- ☐ **Parameters.** Displays the parameters that meet the column-to-parameter requirement for the selected target report.

For more information, see *Using the Auto Linking Feature to Link Content* .

- ☐ **Web Page.** Select this option to indicate that you want to drill through to a webpage. Enter a value in the URL field.
- ☐ **URL.** Enables you to specify the URL for the webpage to which to drill down. This option is available only when Web Page is selected.
- ☐ **Description.** Enables you to enter additional comments related to the drill down. This field is also used to rename a specified drill down.
- ☐ **Target.** Enables you to specify a target for the drill down. Options include: New Window, Same Window, or a value that you specify. The default value is New Window.
- ☐ **Parameters.** Displays the parameters that you have indicated for the current drill down.

If you are working with a report that has parameters, the parameter names are automatically retrieved and made available from the Name control in the Parameters section of the Drill Down dialog box, as shown in the following image.

By default, the field is labeled with a value of Name. If there are multiple parameters to choose from, you can use the drop down list to make a selection. You can also manually enter a name to create a new parameter. The parameters that display are populated from the underlying report procedure (.fex) that you selected for your drill down.

The Type field enables you to specify a field or constant value. The options in the Value list are based on the fields that you selected for your report. The item that you select determines the value for the parameter (for example, Discount or Revenue).

Note: If you switch the Type field from Field to Constant or from Constant to Field, the Value field is reset, enabling you to specify a unique value.

Procedure: How to Create a Single Drill Down Link

You can create a single drill down link on a measure field.

1. Create a report or chart with at least one measure field.
2. In the Query pane, do one of the following:
 - ☐ Right-click the measure field and click *Drill Down*.
 - ☐ Click the measure field and on the *Field* tab, in the *Links* group, click *Drill Down*.

The Drill Down Dialog box displays, as shown in the following image.

Adding Parameters for Data Selection at Run Time

You can add new parameters to your report or chart to create parameter options for selection at run time. This enables you to dynamically select and review different scenarios with your data, offering you on-demand, dynamic report or chart creation at run time.

When you add a parameter, it becomes a field container into which you can add one or more measures and dimensions. You create a new parameter by right-clicking on a field container in the Query pane and clicking *New Parameter*. This creates a numbered parameter (for example, Parameter 1). In cases where you have multiple parameters defined, the numbering is applied sequentially.

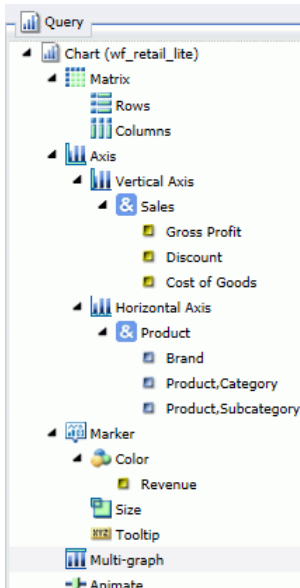

Once you add a parameter, you can rename the variable by right-clicking the *Parameter-n* field container and clicking *Rename Variable*, where *n* is the number of the parameter that was added. Once you rename a parameter field container, the new title displays in the Query pane and at run-time. This allows you to easily identify the parameters while categorizing the data fields that you want each to contain. For example, if you add a number of Sales-related fields to a parameter, you can rename the parameter with a title of Sales to encapsulate the data fields that you selected. Parameters should be renamed before you run the report or chart so that they are easy to identify.

In order to populate parameters in your report or chart, data fields must be placed in the parameter field container. You can do this by selecting fields from the Data pane and dragging them into the relevant parameter field containers that you create.

Note: Double-clicking the data fields in the Data pane places the data field in the default field containers in the Query pane, not the parameter field container. For example, in a report, if you double-click *Discount*, the data field is placed in the Sum container (outside of the parameter field container that you created). You can always drag a data field into a parameter container from another field container in the Query pane if you wish to consider it a parameter.

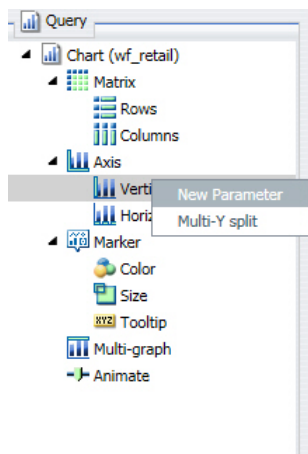

You can also reorder the data fields that you have placed in a given parameter field container by dragging them into the order that you wish to display them at run time. Parameters can be specified in any field container, with the exception of Multi-graph. Once you have defined your parameters and selected the relevant data fields, run the report or chart. Using the drop-down lists for each parameter, you can select different options from the parameter lists to view the data in your report or chart dynamically. To load different scenarios, select the values and then click *Run*.

The following image shows the Query pane with a number of parameters and data fields specified.

Procedure: How to Add a Parameter

1. Create a new report or chart or open an existing one.
2. Add a new parameter by right-clicking a field container and clicking *New Parameter* , as shown in the following image.

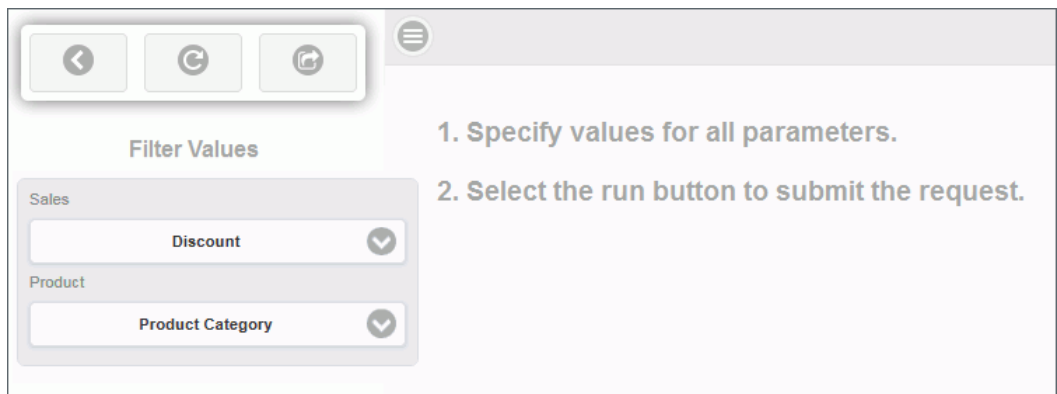

A new parameter field container is added.

3. Add the data fields that you would like to display in a parameter list at run time to the new parameter field container.
4. Optionally, rename the parameter by right-clicking the parameter and clicking *Rename Variable*.

This is not required, but it does help in differentiating the various numbered parameters that display, depending on how many you define.

5. Optionally, add one or more additional parameters, and relevant data fields, into the field containers for which you would like to select data values at run time.
6. On the Quick Access toolbar, click *Run*.

You can use the Parameter drop-down lists that display at run-time to create different views of your data, as shown in the following image.

Note: You can optionally run your report or chart using the default parameters without making a selection. Click the down arrow on the Run button in the Quick Access toolbar and select Run with Default Parameter Values.

The following navigational icons display at run time:

Icon	Description
	Close Filter Panel. Click this option to collapse the filter panel, displaying more of the report or chart in the right pane.
	Reset filter values. Click this option to reset the filter values to their default values, as indicated when the parameter was initially set up.

Icon	Description
	Run with filter values. Click this option to run the report or chart based on your selections.
	Show filter panel. Click this option to show the filter panel when viewing a report or chart. When viewing the filter panel, you can close it by clicking <i>Close Filter panel</i> .

Working With Slicers

Slicers provide a quick and easy way to add dynamic user controls to a chart or report, giving you the ability to filter the data in use as you create or view content. Slicers are dynamic filters that can be changed by making a selection from a menu of fields. You can use them to filter your content by modifying a slicer in the Slicers tab and running the chart or report, or you can use them at run time when running a report in InfoMini with the Slicers tab selected.

Creating Slicers

You can create slicers by dragging fields to the Slicers tab or through the context menu of a field. When you create a slicer group, it appears on the Slicers tab.

You can use slicers to dynamically filter reports at design time.

You can dynamically filter reports at run time when they are included in an InfoMini application. For more information on InfoMini, see *Understanding and Building InfoMini Applications*.

Procedure: How to Create a Slicer

1. Click the *Slicers* tab.
2. Create a new slicer by using one of the following methods:

- ☐ Click the *New Group* button to create a new slicer group.

Select a field from the Data pane and drag it onto the *Drag Fields Here to Create Slicers* text on the Slicers tab.

Note: You cannot drag parent-child hierarchies onto the Slicers tab.

The field is added to the new group.

or

- ☐ Right-click a field in the Data pane, point to *Slicers*, and then click *New Group*.

The field is added to the new group.

If you are creating a slicer on a full date field, a calendar icon displays adjacent to the field. You can use this icon to select a date using a calendar control.

Procedure: How to Add a Field to an Existing Slicer Group

1. Click the *Slicers* tab.
2. Add a field to an existing slicer group using one of the following methods:
 - ☐ Select a field from the Data pane and drag it onto an existing slicer group.
or
 - ☐ Right-click a field in the Data pane, point to *Slicers*, and then click *Existing Group*.
Select an existing group from the menu, and then click *OK*.
The field is added to the existing group.

Procedure: How to Add a Hierarchy as a Slicer Group

Note: You cannot drag parent-child hierarchies onto the *Slicers* tab.

1. Click the *Slicers* tab.
2. Add a hierarchy as a slicer group using one of the following methods:
 - ☐ Select a hierarchy from the Data pane and drag it onto an existing slicer group.
The hierarchy is added as a new group, not as a slicer in the existing group. The new group is given the same name as the hierarchy.
or
 - ☐ Click the *New Group* button to create a new slicer group.
Select a hierarchy from the Data pane and drag it onto the *Drag Fields Here to Create Slicers* text of the *Slicers* tab.
The hierarchy is added to the new group. The name of the new group changes to the name of the hierarchy automatically.

Note: Hierarchies cannot be added to existing slicer groups. If a hierarchy is dragged onto an existing slicer group, a new group is created automatically.

There is no right-click context menu for hierarchies. To add a hierarchy as a slicer group, you must drag it into a new slicer group.

Filtering With Slicers

Once you add slicers to an InfoAssist+ report, you can use them to filter the report. You can select values from the slicers menus, change the number of records that appear, create new slicer groups, clear existing slicer groups, and update the report preview.

Slicers that are not selected have their values filtered by the selected slicers. Only values that meet the criteria for previously selected slicers will appear in the menu for the next slicer. Slicers are not filtered in the order they appear in the slicer group, but by the order they are selected. Cascading of slicers is only valid for hierarchies.

Procedure: How to Change the Relationship Operator in a Slicer

1. With at least one slicer added to the report, click the *Slicers* tab.
2. Click the operators button on the slicer for the operation you want to change.

A list of operators (numeric) appears in the menu.

Note: Alpha fields just flip between equal and not equal.

3. Select the operator that you want from the menu. You can rest the mouse on an operator to display a tooltip describing the operation.

How Slicers Cascade Together

Slicers cascade within a hierarchy (cube or dimension builder-based), rather than in the order of user interaction, eliminating potential performance issues.

Procedure: How to Cascade Slicers

Controls with fields from the same hierarchy are cascaded together.

1. Create a report.
2. Create multiple slicer groups, as described in [How to Create a Slicer](#) on page 124.

Note: You can select multiple values by holding down the CTRL key while selecting items in the drop-down list box. In cases where multiple items are selected, the label for the drop-down list is set to Multiple. You can click the drop-down list to review the selections.

Once you click *OK*, the new control appears in the drop-down menu.

The 1 prior to the decimal point indicates that this is the first cascade you have interacted with. The 1 after the decimal point indicates that it is the first control in that cascade.

3. Filter the report using the controls in the slicer groups that you created.

Note: The order of a cascade is dynamic. For example, if you selected Camcorder from Product Subcategory first, then the Product Category control would have a value of Video Production.

Changing a Field Format

You can change the format of any field except a Sort field. You can change the format of measure fields, as well as any calculated fields.

The following procedures show how to change a field format from the Field Format Options dialog box. For more information on how to use the Format group options, see *Field Tab*.

Procedure: How to Assign an Alphanumeric Format

1. With a report open in Live Preview, right-click a virtual field or column measure field, and select *Edit Format*.

The Field Format Options dialog box opens.

2. From the Field type list, select *Alphanumeric*.
3. To assign a different length, specify a number between 1 and 4095 in the *Total length* field. The default value is 20.
4. Click *OK* to close the Field Format Options dialog box and return to the canvas.

The new format appears in the previously selected column.

Procedure: How to Assign a Numeric Format

1. With a report open in Live Preview, right-click a virtual or column measure field, and click *Edit Format*.

The Field Format Options dialog box opens.

2. From the Field type list, click one of the following options:

☐ *Floating Point* (default length 7.2)

☐ *Integer* (default length 5)

☐ *Decimal* (default length 12.2)

☐ *Packed* (default length 12.2)

If the selected field matches the selected format type, its current length appears in the Field Length field. Otherwise, the default length appears in the Field Length field. The Decimals field shows the numbers of decimal places for Floating Point, Decimal, and Packed.

- ☐ To assign a different length, specify it in the *Field Length* field for format types as follows: 1-9 for Floating Point, 1-11 for Integer, 1-20 for Decimal, and 1-33 for Packed.
 - ☐ To assign a different number of decimal places for Floating Point, Decimal, or Packed, specify the number in the *Decimals* field.
3. Click *OK* to close the Field Format Options dialog box and return to the canvas.
The new format appears in the previously selected column.

Procedure: How to Assign a Date Format

1. With a report open in Live Preview, right-click a virtual or column measure field, and select *Edit Format*.
The Field Format Options dialog box opens.
2. From the Field type list, click *Date*.
3. To assign a different date display format, select a date format from the *Date Format* list.
The default date display format is MDY.
4. Click *OK* to close the Field Format Options dialog box and return to the canvas.
The new format appears in the previously selected column.

Procedure: How to Assign a Date-Time Format

1. With a report open in Live Preview, right-click a virtual or column measure field, and select *Edit Format*.
The Field Format Options dialog box opens.
2. From the Field type list, click *Date-Time*.
3. To assign a different date-time format, select the date format you want to use from the *Date Format* list. Expand Year First, Month First, or Day First to see the available options.
4. Select a time format (if applicable) from the Time Format list.

If you select the *Time Only* check box then you can only set a time format. Expand Hour First, Minute First, or Seconds First to see the available options.

Note: These expansion options are only visible when you select Time Only.

5. Click *OK* to close the Field Format Options dialog box and return to the canvas.

The new format appears in the previously selected column.

Procedure: How to Add a Percent Sign to a Numeric Field

You can add a percent sign to the end of a numeric value (Decimal, Integer, and Floating Point formats). This numeric display option includes a percent sign along with the numeric data, but does not calculate the percent.

1. With a report open in Live Preview, right-click a virtual or column measure field, and select *Edit Format*.

The Field Format Options dialog box opens.

2. From the Field type list, click a numeric value format (Floating point, Integer, Decimal, or Packed), and then select the *Percent (%)* check box.
3. Click *OK* to close the Field Format Options dialog box and return to the canvas.

The new format appears in the previously selected column.

Dynamic Grouping

Dynamic grouping allows you to create groups of elements based on the field data type that you select. For example, in the `wf_retail_lite` database, there are a number of brands of televisions. Using the dynamic grouping functionality, you can create groups based on the popularity of a particular brand. The first group might include top sellers such as LG and Sony. The second group might contain the remaining brands (Panasonic, GPX, Supersonic, Tivax, and Audiovox). This would allow you to group top sellers into one group, and the remaining brands into another group.

Note: The Create Group option is only available for dimension fields of non-numeric format or attribute.

You can also specify multiple, unique groupings in the same session. For example, you might want to group the data to indicate groups or products, or specific regions.

Note: If you want to exclude a specific data element from your analysis, you can use the filter functionality.

The grouping that you specify is applied and this new group then replaces the original field that you selected in the Query pane. The name that you specify when creating the group is reflected in the Query pane.

Note: You can edit the group once it has been created by right-clicking on the higher-level field and clicking *Edit Group*.

Procedure: How to Create a Dynamic Group

1. From the Data pane, add one or more data fields to your report or chart.
2. In the Query pane, right-click the data field for which you want to apply dynamic grouping.

Note: The Create Group option is also available in the Data pane shortcut menu.

3. Click *Create Group*.

The Create a Group dialog box displays.

4. In the Field text box, optionally type a name for the new group.
5. Select the data values that you want to group. Use CTRL + click to select more than one value, as shown in the following image.

6. Click *Group*.

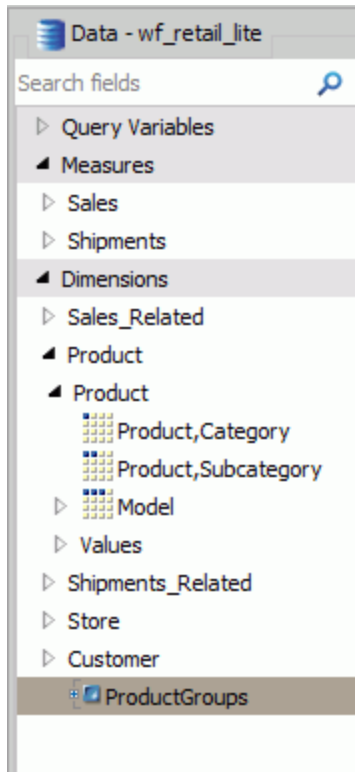

Note: To ungroup values, click a group and then click *Ungroup*.

7. Optionally, create additional groups, as shown in the following image.

8. Click OK.

Your grouped data will display in the Data pane when your report, chart, or visualization refreshes, as shown in the following image.

Customizing Domain Pages

This section describes page customization features, such as configuring responsive behavior, using the Easy Selector, working with comments, and removing customizations.

Using the Easy Selector

The Easy Selector provides a simple way to add content to a page at run time, without opening the Resources tree. It also allows you to control which items users can access.

You can enable the Easy Selector feature on a container or a column level.

Procedure: How to Use the Easy Selector Container

1. Sign in to the BUE portal as a developer or a manager.
2. In the Resources tree, under the Domains node, create a new folder.

3. Populate this folder with the content that you intend to make available through the Easy Selector at run time.

Note: Ensure that the folder only includes file content and no subfolders.

4. Publish the folder.
5. In the Resources tree, right-click a domain or folder, point to *New* , and then click *Page*.
The Page Designer opens.

6. Select a columnar template from the Add Page window and click *Create*.

7. In the *Insert* tab, in the *Containers* group, click *Easy Selector*.

The Easy Selector container is inserted into the page. The Browse For Folder dialog box opens next to the Easy Selector container, allowing you to select a target folder.

8. Optionally, navigate to the folder that you that want to display inside the Easy Selector at run time, and then click *OK*. If no target folder is selected, the entire repository is displayed at run time, allowing the user to explore all available domains and folders.

Note: You can change the folder location by clicking the *Select Folder* button in the Properties panel and navigating to a different folder. It is not recommended to change the folder location after the end users have begun using the Easy Selector.

9. Repeat steps 7 and 8 to create more Easy Selector containers, if needed.

Note: You can multiselect the containers by holding the Ctrl key.

10. Click *Save* and close the Page Designer.
11. In the Resources tree, right-click your new page and click *Publish*.

The page is now available for adding to the BUE portal.

12. Right-click the page and click *Add to Portal*.

The confirmation message appears.

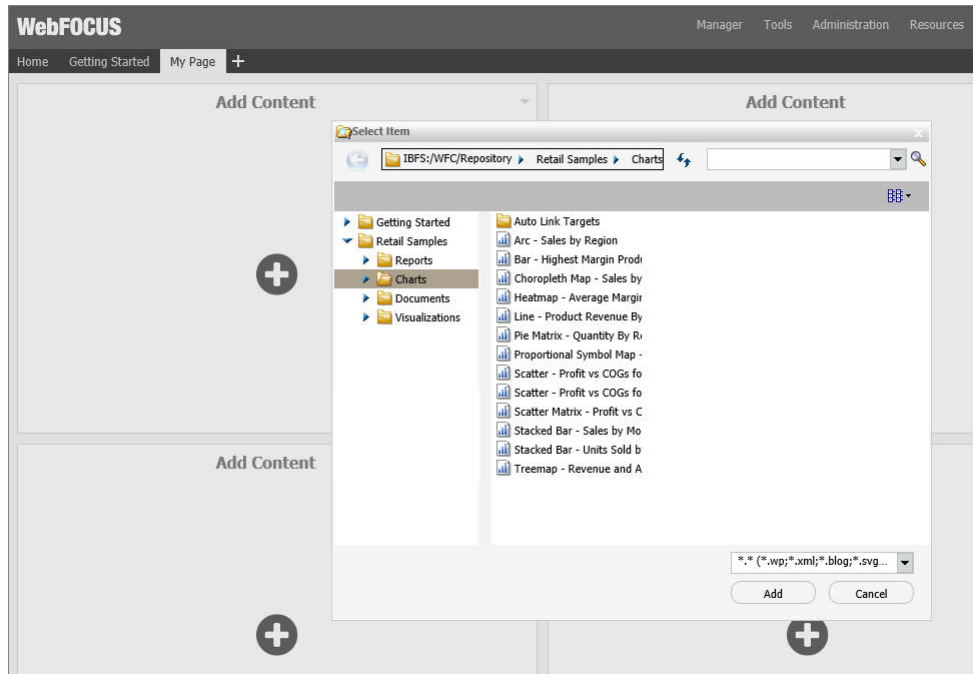

13. Click *OK*.

The BUE portal refreshes and the page displays in the new tab.

14. Click the *Add content* button.

The Select Item dialog box opens.

15. Navigate to an item that you want to display and click *Add*, as shown in the following image.

The selected item opens inside the Easy Selector container.

Procedure: How to Use Easy Selector in a Column

1. Sign in to the BUE portal as a developer or a manager.
2. In the Resources tree, under the Domains node, create a new folder.
3. Populate this folder with the content that you intend to make available through the Easy Selector at run time.

Note: Ensure that the folder only includes file content and no subfolders.

4. Publish the folder.
5. In the Resources tree, right-click a domain or folder, point to *New* , and then click *Page*.

The Page Designer opens.

6. Select a columnar template from the Add Page window and click *Create*.
7. With the page canvas selected, in the Properties panel, clear the *Lock Page* check box and select the *Prevent Layout Change* check box.

Note: This configuration allows users to add new content to a page at run time, while preventing them from changing the column layout, which is important for the Easy Selector.

8. In the Properties panel, click *Container Defaults*.

The Container Defaults dialog box opens. Here you can customize the drop-down menu for the items that are displayed on the page at run time. Click *OK* to close the Container Defaults dialog box.

9. Select a column.

10. In the Properties panel, select the *Show Easy Selector* check box.

The Browse For Folder dialog box opens and displays the same folder structure as the Domains node in the Resources tree.

11. Click the folder you that want to display inside the Easy Selector at run time, and then click *OK*.

Note: You can change the folder location by clicking the *Select Folder* button and navigating to a different folder. It is not recommended to change the folder location after the end users have begun using the Easy Selector.

12. Repeat steps 9-11 for other columns, if needed.

Note: You can multiselect the columns by holding the Ctrl key.

13. Click *Save* and close the Page Designer.

14. In the Resources tree, under the Portals node, right-click your new page, and click *Publish*.

15. Right-click the page again and click *Add to Portal*.

The confirmation message appears.

16. Click *OK*.

The BUE portal refreshes and the page displays in the new tab.

17. Click the *Add content* button.

The Select Item dialog box opens.

18. Select an item from the list and click *Add*.

The selected item opens and a new Add content button displays in the next column, as shown in the following image. This allows you to add the remaining items that are available to you. You can also multiselect items inside the Select Item dialog box.

Additionally, you can replace an item on the page with any item from the Select Item dialog box. You can access the Replace menu option by clicking the arrow in the upper-right corner of the container panel.

Note: The Add content button disappears and the Replace option becomes inactive after the last item in the Select Item dialog box is added to the page.

Building a Responsive Layout

A responsive layout resizes dynamically to any width based on screen size, device, and orientation, thus eliminating the need to design for a specific device preference. This approach takes your content beyond the desktop and delivers a quality experience to users, on any display. The Page Designer offers you a series of versatile presets, that make the task of creating a responsive portal a quick and straightforward process.

A user must have the privileges of a developer or manager to be able to build a responsive layout.

Procedure: How to Build a Responsive Layout

1. Sign in to the BUE portal as a developer or a manager.
2. In the Resources tree, right-click a domain or folder, point to *New* , and then click *Page*.
The Page Designer opens.
3. Select the *1 Column* template from the Add Page window and click *Create*.
All responsive layouts are created in a one column page layout.
4. Click inside the column that you just created. On the Properties panel, set the *Container Padding* to *5px* and select the *Same for All* check box.
5. On the *Insert* tab, in the *Containers* group, click *Responsive*.
The Responsive container is inserted, taking up the full width of the page.
6. On the *Insert* tab, in the *Content* group, click *WebFOCUS Resources*.
7. Populate the responsive container with content from the folder of your choice, by dragging them to the container.

When you drag items sequentially, you can choose the order in which they display, using the shaded placement indicator as a guide. When you drag items simultaneously, using the multiselect option (Ctrl key), they display in the order in which they are selected.

8. Multi-select the panels to which you want to assign the Custom CSS Classes by holding the Ctrl key and clicking a title bar of each panel.

For example, if you were going to create a responsive portal that contained four items in the first row, and two items in the second row, you would select the first four panels.

Note: You can only multi-select panels by clicking its title bars. If the title bars are hidden, you cannot multi-select these panels.

9. On the Properties tab of the Properties panel, click the *Responsive Properties* button.

The Advanced Responsive Item Properties dialog box opens.

10. In the *Custom CSS Classes* field, type *bip-responsive-n*.

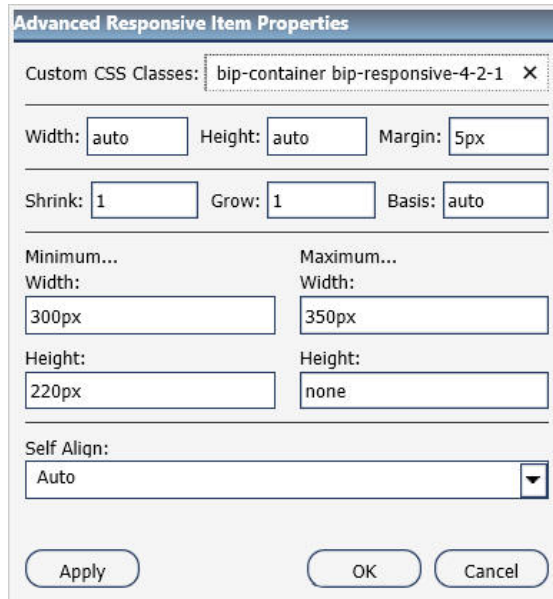

where:

n

Is the responsive folding behavior that you want to apply the content on your page.

For example, *bip-responsive-4-2-1* means that the content will display four items across on wide screens, two items across on medium screens, and one item across on narrow screens. If you use *bip-responsive-3-2-1*, the content will display three items across, then two items across, then one item across. If you use *bip-responsive-2-1*, content will display two items across, then one item across. If you choose *bip-responsive-1*, the item will fill the entire row.

In the following image, we have updated the Custom CSS Classes field for a page that uses the 4-2-1 responsive folding behavior for the first four items on the page.

The image shows a dialog box titled "Advanced Responsive Item Properties". It contains several input fields and buttons. The "Custom CSS Classes" field is populated with "bip-container bip-responsive-4-2-1". Below this, there are fields for "Width" (set to "auto"), "Height" (set to "auto"), and "Margin" (set to "5px"). Further down, there are fields for "Shrink" (set to "1"), "Grow" (set to "1"), and "Basis" (set to "auto"). There are also sections for "Minimum..." and "Maximum..." width and height settings. The "Minimum..." section has "Width" set to "300px" and "Height" set to "220px". The "Maximum..." section has "Width" set to "350px" and "Height" set to "none". At the bottom, there is a "Self Align" dropdown menu set to "Auto". Finally, there are three buttons: "Apply", "OK", and "Cancel".

Note: When one of the built-in responsive classes is used in the Custom CSS Classes field, it sets the width of the panel as a percentage of the page width, based on media queries. The percentage width setting made in these built-in responsive classes overrides any width settings defined on the panel.

11. Click *OK* to close the Advanced Responsive Properties dialog box.

The first row of panels are now stretched evenly across the Responsive container.

12. Multiselect the remaining panels by holding the *Ctrl* key and clicking each panel.
13. On the Properties panel, click the *Responsive Properties* button.

The Advanced Responsive Item Properties dialog box opens.

14. In the *Custom CSS Classes* field, type *bip-responsive-2-1*, as shown in the following image. This will enable the remaining two panels to go from two across to one across on a smaller screen.

Advanced Responsive Item Properties

Custom CSS Classes:

Width: Height: Margin:

Shrink: Grow: Basis:

Minimum... Width: Maximum... Width:

Minimum... Height: Maximum... Height:

Self Align:

15. Set Minimum Height to *440px*.

16. Click *OK* to save the properties.

The remaining panels now stretch across the Responsive container, in the second row.

Note: You can create multiple layouts using this principle and varying the CSS classes to reflect the desired percentage.

17. With the Responsive container selected, make the following changes:

- ☐ On the Properties tab of the Properties panel, set Height to *Dynamic*.
- ☐ On the Title tab of the Properties panel, select the *Hide Title Bar* check box.
- ☐ On the Style tab of the Ribbon, in the Border group, click *Style*, and then select *None*.

Note: These changes render the Responsive container invisible on the page at runtime, and in the Page Designer. To edit the content in your Responsive container or access its properties, you can use the breadcrumb trail below the Property sheet to select it.

18. Click the *Save* button and close the Page Designer.

19. Publish your page.

20. Right-click the page and click *Add to Portal*.

The confirmation message appears.

21. Click *OK*.

The BUE portal refreshes and the page displays in the new tab.

22. Change the size of your browser window to observe the responsive behavior.

All items rearrange perfectly to fill the page.

Working With Comments

In domain pages, you can use comments to interact with your peers in a multi-user environment. Developers and managers can enable comments in the Page Designer. You can enable comments on pages, containers, and individual content items.

Procedure: How to Enable Comments on a Domain Page

1. Sign in to the BUE portal as a developer or manager.
2. In the Resources tree, right-click a domain or folder, point to *New* , and then click *Page*.
The Page Designer opens.
3. In the Add Page dialog box, choose a page template and, optionally, add new page information.
4. Click *Create*.
5. In the Properties panel, click the *Comments* drop-down menu and update the style of your comments to reflect any standards.
6. Save the page and close the Page Designer.

Procedure: How to Enable Comments on a Container

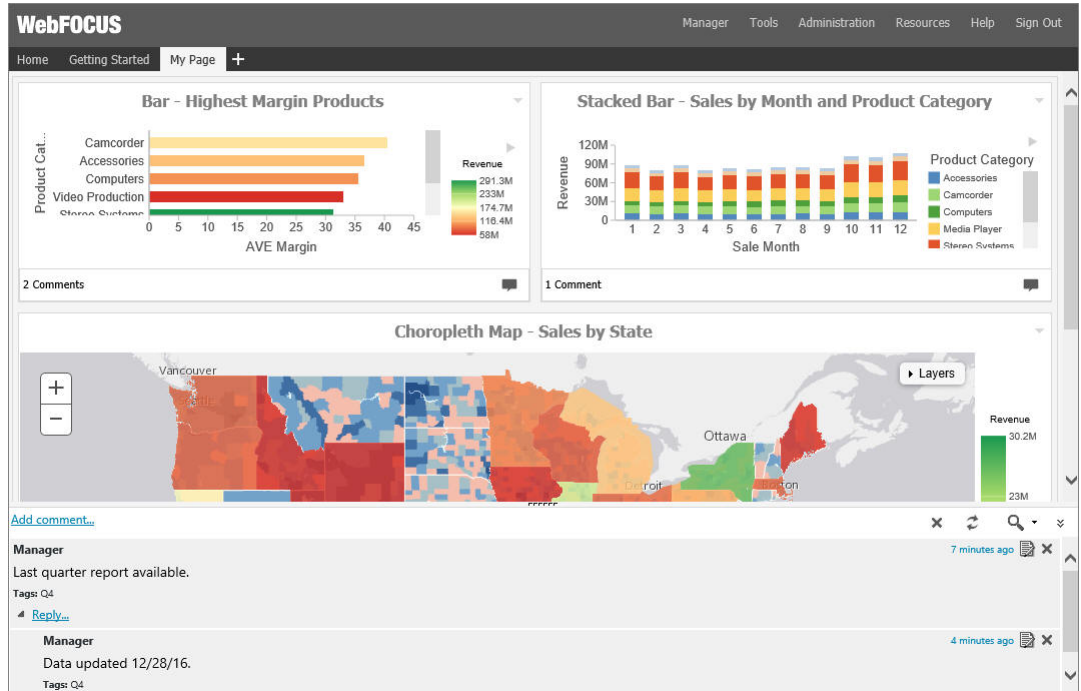

1. Sign in to the BUE portal as a developer or manager.
2. In the Resources tree, right-click a domain or folder, point to *New* , and then click *Page*.
The Page Designer opens.
3. In the Add Page dialog box, choose a page template and, optionally, add new page information.
4. Click *Create*.
5. On the *Insert* tab, in the *Containers* group, click any container button.
The container is placed on the page canvas.
6. In the Properties panel, select *Show Comments*.

When enabled, this option allows you to show and hide comments on a container or item at run time.

7. Save the page and close the Page Designer.

Using Comments at Run Time

When enabled, comments display at run time, as shown in the following image.

To enable comments on an item at run time, click the arrow in the upper-right corner of the container panel, and then click *Show Comments*, as shown in the following image.

Note: The Show Comments menu option is only available if comments were enabled on a container at design time.

Additionally, you can use the following controls to interact with comments:

- ❑ Click the *Minimize* button  in the upper-right corner of the comment area, to minimize comments, as shown in the following image.

- Click the *Restore* button  in the lower-right corner of the container, to restore the comments area.

- ❑ Customize the height of the comments area by dragging the height indicator to achieve a desirable size, as shown in the following image.

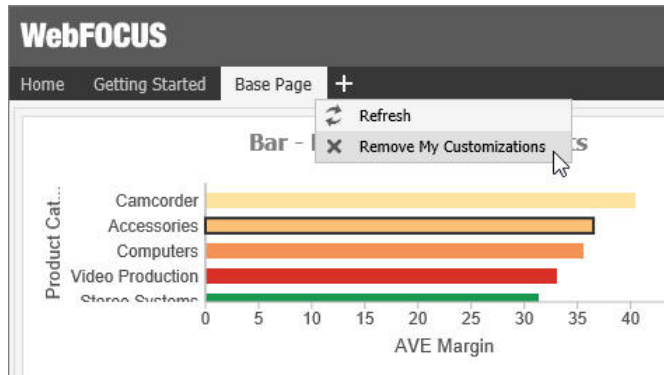

- ❑ Click the *Refresh* button  in the comments menu, to refresh comments.
- ❑ Click the *Search* button  in the comments menu, and type a key word or words in the search field, to search through comments. You can specify the search criteria by clicking the arrow next to the Search button and selecting search criteria, such as user name, content, or meta tags.
- ❑ Click the *Remove All* button  to remove all comments from all users. The Remove All option is only available to managers, developers, and group administrators.

Removing Customizations

If the domain page is unlocked and added to the BUE portal, users are able to customize it and remove their customizations at run time.

Procedure: How to Remove Customizations From a Base Page at Run Time

1. Inside the BUE portal, right-click a page tab of a base page.
2. Click *Remove My Customizations*, as shown in the following image.

The page refreshes. The customizations are removed from the modified page.

Note: This option is not available when the Lock Page option is selected.

Feedback

Customer success is our top priority. Connect with us today!

Information Builders Technical Content Management team is comprised of many talented individuals who work together to design and deliver quality technical documentation products. Your feedback supports our ongoing efforts!

You can also preview new innovations to get an early look at new content products and services. Your participation helps us create great experiences for every customer.
