

WebFOCUS

Release 8207.08

About This Release

May 27, 2020

Active Technologies, EDA, EDA/SQL, FIDEL, FOCUS, Information Builders, the Information Builders logo, iWay, iWay Software, Parlay, PC/FOCUS, RStat, Table Talk, Web390, WebFOCUS, WebFOCUS Active Technologies, and WebFOCUS Magnify are registered trademarks, and DataMigrator and Hyperstage are trademarks of Information Builders, Inc.

Adobe, the Adobe logo, Acrobat, Adobe Reader, Flash, Adobe Flash Builder, Flex, and PostScript are either registered trademarks or trademarks of Adobe Systems Incorporated in the United States and/or other countries.

Due to the nature of this material, this document refers to numerous hardware and software products by their trademarks. In most, if not all cases, these designations are claimed as trademarks or registered trademarks by their respective companies. It is not this publisher's intent to use any of these names generically. The reader is therefore cautioned to investigate all claimed trademark rights before using any of these names other than to refer to the product described.

8207.08 Release Notes

The following topic provides all the information that you need to know about this release of WebFOCUS.

In this chapter:

- ☐ [Release and Gen Information](#)
 - ☐ [New Features](#)
 - ☐ [Fixes](#)
 - ☐ [Upgrade Notes](#)
 - ☐ [Known Issues](#)
 - ☐ [System Requirements](#)
-

Release and Gen Information

Release Date	Gen Information	Reporting Server
Monday, April 27, 2020	wf042220a Gen 5 wi042220a as042220a	8207.08 Gen 1913

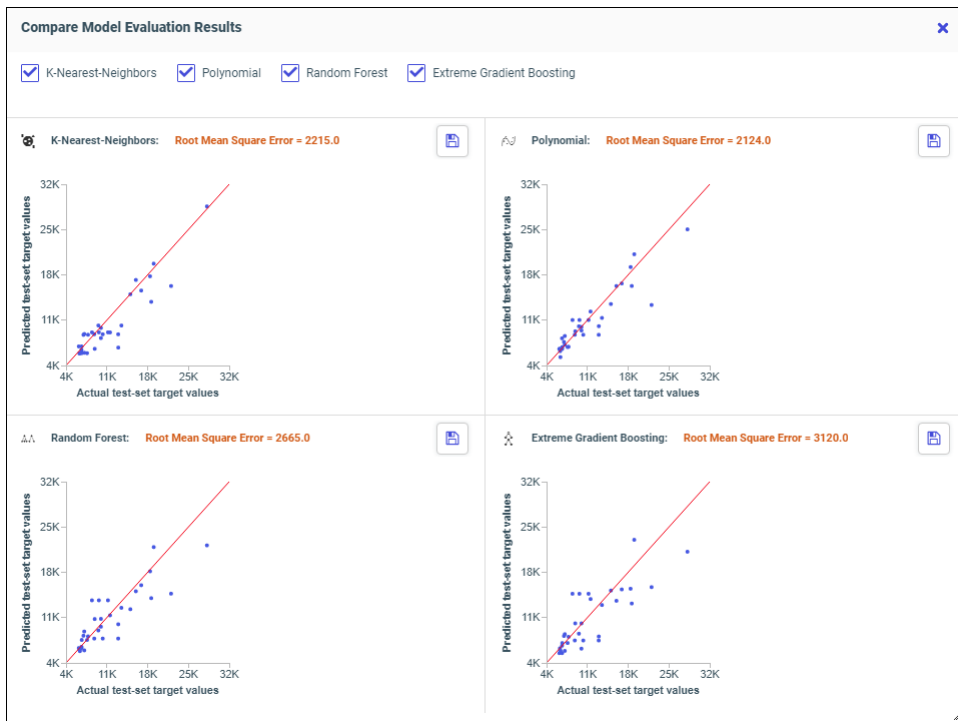

New Features

Compare Multiple Models When Running Predictive Analytics

When running predictive analytics on your data using Regression models, you can now compare multiple models at once.

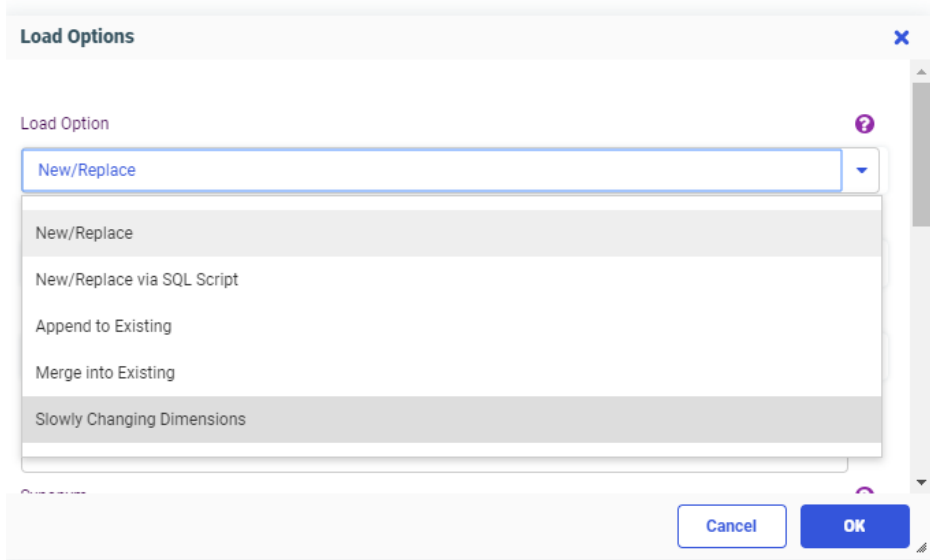

A Compare dialog box displays the evaluation reports for each model comparison, including an RMSE value and scatter plot, so you can quickly choose which model is the best.

You can also filter the model comparisons and save models individually.

Slowly Changing Dimensions on a Data Flow

When loading to a target in a data flow on the Web Console that supports Slowly Changing Dimensions (SCDs), you can select the load type *Slowly Changing Dimensions* from the Load Options drop-down list, as shown in the following image.

If your target synonym has columns with:

- ☐ Type II SCDs, those columns will be loaded using the rules established for Type II slowly changing dimensions.
- ☐ Type I SCDs, you can choose whether to update all rows (the default) or only active rows, as shown in the following image.

Note: Although this option appears whether the synonym has Type I SCDs or not, it is ignored for Type II SCDs.

Generating a Google Sheets Spreadsheet

When you have the Adapter for Google Sheets and the Adapter for Google Drive configured, you can generate a Spreadsheet in the Google Sheets environment from a WebFOCUS request using the HOLD FORMAT GGLSHTS command.

The syntax is:

```
ON TABLE HOLD FORMAT GGLSHTS AS GoogleDriveApplication/Name
```

where:

GoogleDriveApplication

Is the name of the WebFOCUS Server application mapped to Google Drive.

Name

Is the name of the Google Spreadsheet that is to be stored in Google Sheets.

Adapter for Google Drive

The Adapter for Google Drive is the WebFOCUS Adapter used to integrate with Google Drive. It is also used in conjunction with the Adapter for Google Sheets to create spreadsheets in the Google Sheets environment from a WebFOCUS report.

Output formats such as PDF, JSON, and XML from WebFOCUS reports can be stored in Google Drive.

Adapters, such as JSON and XML, can be used to report against their respective documents stored in Google Drive.

Adapter for Google Sheets

The Adapter for Google Sheets is now available and can be used to report off of spreadsheet data resident in the Google Sheets environment.

Adapter for Google Analytics: Support for Service Account Authentication

In prior releases, only OAuth20 authentication was supported for the Adapter for Google Analytics. Service Account Authentication support has now been added. A service account is a non-human user that needs to authenticate to Google and be authorized to access data in Google APIs, for example, for running reports distributed by ReportCaster.

To configure Service Account authentication, select *Service Account* from the *Security* drop-down list, as shown in the following image.

Add Google Analytics to Configuration

Connect parameters

Connection Name ?

CON01

Google Analytics URL ?

<https://www.googleapis.com/analytics/v3/data>

Web Profile ID ?

Security ?

OAuth

OAuth

Service Account

The following fields appear for configuring Service Account authentication.

Key File Location

Is the location of the JSON Key File that was created in the Google Development environment. For example:

`C:\ibi\apps\googleanalytics\webfocus-555555-874feowfwojoe7.json`

Client Email Address

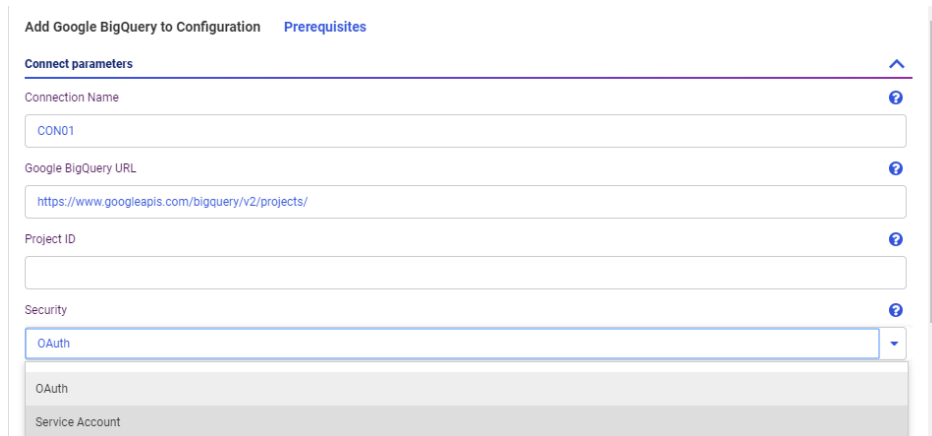

Is the client email address defined in the JSON Key File. For example:

`xxxxxxxxxxxx-compute@developer.gserviceaccount.com`

Adapter for Google BigQuery: Support for Service Account Authentication

In prior releases, only OAuth20 authentication was supported for the Adapter for Google BigQuery. Service Account Authentication support has now been added. A service account is a non-human user that needs to authenticate to Google and be authorized to access data in Google APIs, for example, for running reports distributed by ReportCaster.

To configure Service Account authentication, select *Service Account* from the *Security* drop-down list, as shown in the following image.

The screenshot shows a configuration window titled "Add Google BigQuery to Configuration" with a "Prerequisites" link. Under the "Connect parameters" section, there are fields for "Connection Name" (containing "CON01"), "Google BigQuery URL" (containing "https://www.googleapis.com/bigquery/v2/projects/"), and "Project ID". The "Security" dropdown menu is open, showing "OAuth" and "Service Account" options. The "Service Account" option is highlighted.

The following fields appear for configuring Service Account authentication.

Key File Location

Is the location of the JSON Key File that was created in the Google Development environment. For example:

```
C:\ibi\apps\googlebigquery\webfocus-555555-874feowfwojoe7.json
```

Client Email Address

Is the client email address defined in the JSON Key File. For example:

```
xxxxxxxxxxxx-compute@developer.gserviceaccount.com
```

Adapter for Google BigQuery: Support for SQL Immediate Commands

The SQL Passthru commands INSERT, UPDATE, and DELETE are now supported for the Adapter for Google BigQuery.

For example:

```
SQL SQLGBQ
DELETE FROM 'focus-100020.informationbuilders_tables.car_file' WHERE
country="ENGLAND"
END
```

Adapters for Google Sheets and Google Drive: Service Account Authentication

Service Account Authentication is available for Google Sheets and Google Drive. A service account is a non-human user that needs to authenticate to Google and be authorized to access data in Google APIs, for example, for running reports distributed by ReportCaster.

To configure Service Account authentication, select *Service Account* from the *Security* drop-down list, as shown in the following image.

Add Google Sheets to Configuration

Connect parameters ⬆

Connection Name ?

CON01

Base Uri ?

<https://sheets.googleapis.com/v4/spreadsheets>

Security ?

Service Account ⬇

OAuth

Service Account

The following fields appear for configuring Service Account authentication.

Key File Location

Is the location of the JSON Key File that was created in the Google Development environment. For example:

`C:\ibi\apps\googlesheets\webfocus-555555-874feowfwojoe7.json`

Client Email Address

Is the client email address defined in the JSON Key File. For example:

`xxxxxxxxxxxx-compute@developer.gserviceaccount.com`

Fixes

- ❑ In an esriGeometryPolyline map in App Studio, a drilldown from a line to a report does not work and the Selection Widget is blank. (191023147)
- ❑ A div tag and other code are added to the HTML page when SQUEEZE is used with a DEFINE that contains HTML code characters in the expression. (191021082)
- ❑ Invalid SQL data type error occurs when using a Microsoft Access Driver to join a hold file to an Access table. (190130144)
- ❑ When accessing and opening a wide In-Document Analytics report as an email attachment from an iPad with iOS version 13, you will get a blank space if you switch the orientation from Landscape to Portrait mode. (200403106)

- ❑ When creating a synonym for any SQL DBMS, if a valid or invalid schema is entered and the enter button is selected, the Data Management Console becomes unresponsive and eventually crashes and terminates. (200408157)
- ❑ Issue with interpreting JSON response for REST, OData, and Dynamics Customer Relationship Management adapters on OS400 platforms.
- ❑ The ACTUAL for datetime fields is incorrect when creating a synonym for a business object using the adapter for Salesforce.com. (200407113)
- ❑ When an Adapter for Git connects to an Azure DevOps using Personal Access Token for authentication, DataMigrator returns errors for the Git operations. (200406112)
- ❑ When parameters are added to site.wfs with incorrect coding, it can result in a non-responsive WebFOCUS client, or failure of the app to start. To address this for <SET> parameter definitions, the \"\n\r\t(,)= characters between a variable name and the open parenthesis character are ignored. (181108129)
- ❑ Japanese characters are garbled after importing a Change Management package.
- ❑ When using the Security Center to search for an external group using an asterisk, the group does not list in the group membership report. (190402021)
- ❑ Error status:403 occurs when accessing Reporting Server Console from the WebFOCUS Administration Console when the user ID has previously been forced off a different browser session that accessed the Reporting Server Console. (200326089)
- ❑ The Datetime column in the ETL log is empty if a FOC2590 or FOC2594 error is returned for a procedure or flow. (200207056)
- ❑ Dynamic Language settings for Hebrew are not reflected in the Paging Control or Search Control menu settings. (191029043)
- ❑ A custom login page does not work and goes to the default page. (200408049)
- ❑ When a field evaluated in the inner query is set to NOT NULL and the inner query does not return a value, a FOC295 error is returned to the non-APT correlated sub-query or incorrect result. (190626058)

Upgrade Notes

- ❑ When upgrading from release 8206.xx to 8207.xx, the WebFOCUS Integrated Installation does not automatically assign the Unicode UTF-8 (CP65001) code page to the Reporting Server configuration. In order to configure the Reporting Server to use the UTF-8 code page, you can select the entry directly from the CODE_PAGE? list, as shown in the following image. In the Web Server console, this list appears in the NLS Configuration tab of the Workspace node.

We recommend that you apply this change because, as of release 8207, WebFOCUS Integrated Installations configure all installed components to use the UTF-8 code page. Changing the Reporting Server code page to UTF-8 will ensure that there is no mismatch of code pages between WebFOCUS, Tomcat, and the Reporting Server, which could result in data retrieval issues.

- ❑ In Release 8207, Magnify functionality is not available. To add Magnify functionality to Release 8207 and higher, see the manual steps outlined in this [topic](#).
- ❑ As of Release 8207, in App Studio, the *Domains* node in the Configured Environments tree has been renamed to the Workspaces node.

Known Issues

- ❑ The WebFOCUS help system does not work when the Application Server is configured with Java Version 11. As a workaround, you can configure your WebFOCUS instance to use help hosted by IBI. This provides an additional benefit, as users will have access to the latest content.

To accomplish this, you need to perform the following configuration using the WebFOCUS Administration Console:

1. Select the *Configuration* tab and navigate to *Application Settings* and then *Application Contexts*.

2. Change the *Help* value to */ibi_apps/ibi_help*.

Note: The *ibi_apps* value must be the same as the WebFOCUS web app context created during installation. If you provided an alias, for example, *ibi_apps8206*, then the value for *Help* should be entered as */ibi_apps8206/ibi_help*.

3. Set the *Help Proxy Host and Port* value to *onlinehelp.informationbuilders.com*.
4. Set the *Help Proxy Context* to */wfappent/8206*. If you are using WebFOCUS Release 8207, set the value to */wfappent/8207*.
5. Select the *Help Proxy Secure* check box.

For example:

6. Click the *Clear Cache* option and continue to sign out and sign in for the settings to take effect.

- ❑ The canvas of WebFOCUS Designer for this release is an interactive canvas based on AHTML. When creating a report, page and row break settings are not supported on this canvas for this release. If you select any other output format, such as HTML, PDF, PPTX, or XLSX, you will see these breaks at runtime. These output format options are available for stand-alone content items only. This will be resolved with the introduction of the non-interactive document canvas in a future release.
- ❑ When an Insight-enabled chart created in the 8207.00 version of WebFOCUS Designer is added to a visualization as external content, the Insight icon does not appear on the chart when the page is run, so Insight features cannot be accessed. Resave the chart in WebFOCUS Designer 8207.01 or later to make Insight available when the chart is added to a visualization.
- ❑ When working with the Cell menu in an interactive report, the filtering functionality does not work as expected.

- ❑ When saving an artifact (from or of and interactive report, chart or dashboard), the output file name is ARsave.html rather than ARhtml.html.
- ❑ If you create a report or chart in ARVERSION=2 (In-Document Analytics) and you set the output format to PDF Analytic Document, an error occurs when you run it. If you change the option in Procedure Settings to Legacy, the report or chart is produced correctly.
- ❑ If you are working with an In-Document Analytics chart in landscape mode on an Android mobile device and you switch to portrait mode, your content displays in fullscreen mode. Your chart displays at the bottom. If you run your content in new window mode, your In-Document Analytics chart does not display in fullscreen mode, displaying the chart on the right.
- ❑ HIDENULLACRS, which hides across columns that have null or zero values in the entire column, is not supported with interactive content using the new Designer style of In-Document Analytics capabilities.
- ❑ If you add an existing ARVERSION=1 report to an AHTML document set to ARVERSION=2, it fails at run time, displaying JSON text on the screen instead of the expected report output.
- ❑ If you are working with a procedure (.fex) and you change the ARVERSION to ARVERSION=2, global filters do not display when you run the procedure.
- ❑ In a scatter plot chart or bubble chart, multiple measure fields on the horizontal and vertical axes generate separate axes, resulting in a grid of scatter plots for each combination of measure fields. In WebFOCUS Designer, if you create a scatter plot chart or bubble chart with multiple measures in the Vertical or Horizontal buckets, only the axis for the first measure in each bucket displays on the canvas. When you run the chart, all measure fields in the Vertical and Horizontal buckets are shown as separate axes, as intended.
- ❑ The Expression Editor has a an area that displays objects that you can add to an expression, which are columns, variables or functions. The selection and display of these was controlled by buttons above the area, but when then size of the area was compressed, some of the buttons were hidden. Now there is a single button with a pull-down menu that allows selecting what objects are displayed.
- ❑ Both the db_collation.sh file and the db_collation.bat file generate the "Main WARN Error while converting string [] to type," error message in the Command Prompt window at the end of their run. This message has no impact on the functionality of this post-installation utility, and it completes the run successfully.

- ❑ The load_repos.sh file generates the "WARNING: sun.reflect.Reflection.getCaller Class is not supported. This will impact performance," error message in the Command Prompt window at the end of its run. In addition, the db_inplace_update.sh, WFReposUtilCMDLine.sh, and update_repos.sh files generate the "Main WARN Error while converting string [] to type," error message in the Command Prompt window at the end of their run. These messages have no impact on the functionality of these post installation utilities, and each one completes its run successfully.
- ❑ App Studio upgrades are currently not supported. Messages related to failures that occurred while merging changes in the mime.wfs and languages.xml files display during the upgrade installation process.
- ❑ When using MS SQL Server as the database platform for the WebFOCUS Repository and upgrading from 8105M to 8207.06, only MS SQL Server 2008 and 2012 are supported. MS SQL Server 2014 and later versions are not supported.

System Requirements

This release is now certified and has been tested with Google Chrome version 81, Firefox version 75, Microsoft Edge Chromium version 80 (WebFOCUS only), Microsoft Edge version 44 (WebFOCUS only), and Internet Explorer version 11. Internet Explorer Compatibility mode is not supported. For additional browser details, see [Browser Information](#).

For more information on supported clients and more, see [Release Information](#).

Feedback

Customer success is our top priority. Connect with us today!

Information Builders Technical Content Management team is comprised of many talented individuals who work together to design and deliver quality technical documentation products. Your feedback supports our ongoing efforts!

You can also preview new innovations to get an early look at new content products and services. Your participation helps us create great experiences for every customer.

To send us feedback or make a connection, contact Sarah Buccellato, Technical Editor, Technical Content Management at Sarah_Buccellato@ibi.com.

To request permission to repurpose copyrighted material, please contact Frances Gambino, Vice President, Technical Content Management at Frances_Gambino@ibi.com.
